THE LABOUR GAZETTE

Prepared and edited in the Department of Labour, Ottawa

MINISTER—THE HONOURABLE GIDEON D. ROBERTSON.
DEPUTY MINISTER—F. A. ACLAND.

Volume 21

JANUARY, 1921

Number 1

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

The month in brief

This issue of the LABOUR GAZETTE contains a statement by the Minister of Labour outlining the government's policy with respect to the present unemployment; also an outline of the policy of the Executive Council of the Trades and Labour Congress on this question. A report is given of the proceedings of the Executive Committee of the Employment Service Council of Canada. The issue also contains articles on the progress of vocational education in Canada.

At the beginning of December, unemployment among trade unions was 10 per cent of the total membership as compared with 5.99 per cent (corrected figure) at the beginning of November, and 3.58 per cent at the beginning of December 1919. According to returns received from about 5,000 firms, there was a continued steady decrease in the general average of employment throughout the month.

The cost of the weekly family budget of staple foods showed a further decline averaging \$14.84 at the middle of December, as compared with \$15.32 in November, \$14.73 in December, 1919, and \$7.96 in December 1914. The index number of wholesale prices also showed a further decline, being 290.5 for Decem-

ber, as compared with 304.2 for November, 322.7 for December, 1919, and 137.6 for December, 1914.

The time loss due to industrial disputes was less during December than during November, or December, 1919. There were in existence during the month 10 strikes, involving about 1,554 workpeople and resulting in a time loss of 14,654 working days. At the end of the month there were on record 4 strikes involving about 379 workpeople.

Proceedings under the Industrial Disputes Investigation Act

During December the Department received reports of two Boards established to deal with disputes between (1) the Corporation of the City of Fort William and certain of its employees, being fire fighters, members of local Union No. 193, International Association of Fire Fighters, and (2) the Canadian National Transfer Company and certain of its employees, being teamsters and chauffeurs, members of the Canadian Brotherhood of Railway Employees. Four applications were received during the month for the establishment of Boards, and an application which had been received during the previous month was withdrawn.

Order-in-Council respecting immigrants

An order-in-council P.C. 2930 was passed on November 30, temporarily suspending regulations made by order-in-council P.C. 924, of May 9, 1910, with regard to the entry into Canada of immigrants of the mechanic, artisan or labourer classes. The new regulations require immigrants of these classes to have \$250 in their own right in addition to transportation to destination in Canada; or if an immigrant is accompanied by his family or any member thereof, \$125 for each member of his family over 18 years of age, and \$50 for each child of 5 and under 18 years. These provisions apply to immigrants from the United States from December 15, 1920, and to immigrants from other countries from January 1921, and will remain in force until March 31 when the earlier regulations will again become operative, unless otherwise ordered. Similar regulations were in force last winter under order-in-council P.C. 2499. (See LABOUR GAZETTE, February, 1920, page 106).

Legislation requested by Labour in Ontario

Members of the executive of the Trades and Labour Congress of Canada, together with the provincial secretary of the Ontario Workers' Educational Association, waited upon the Ontario Government on December 17 to present requests respecting legislation. These included the following: An act limiting hours of labour to not more than eight per day. An act concerning employment of women before and after childbirth. Acts providing for the payment of fair wages and observance of established hours and other conditions; for pensions for aged and needy persons; for aid for co-operative societies; for one day's rest in seven for all workers; to prohibit the activities of private detective agencies in industrial disputes. Amendments to the Ontario Temperance Act, whereby it would be legal to manufacture and sell any beverage not exceeding 2½ per cent alcohol by weight. Amendments to the Workmen's Compensation Act

making it compulsory that all cases of accidents be reported by the employer, no matter whether the man so injured leaves his work at the time or not; to increase the percentage of wages to be paid during accidents; to fix a minimum sum for permanent disability, etc., in harmony with the present cost of living, and that the payments fixed prior to this date be revised in accordance with this minimum. Amendments to the Shops and Factories Act to extend its regulations to industrial establishments such as shipyards, etc., in order that health and safety regulations may be enforced; to raise the age at which children may be employed to sixteen years to coincide with Section 3 of the Adolescent School Attendance Act which will come into force on September 1, 1921; to give further protection to women and children against being employed in unhealthy processes; to prohibit night work in bake shops; and to prohibit the continuance of home work in the clothing industry. Amendments to the Trade Disputes Act of Ontario to make it apply to public bodies such as the Hydro Electric Commission, the Toronto Police Commission, etc. They also requested that the powers conferred by the Ontario Employment Agencies Act, 1917, be exercised to the end that all private employment agencies operated for profit be abolished. That the Building Trades Protection Act be enforced by the appointment of scaffolding inspectors, etc., in the largest centres. That labour should be allowed representation on all government and appointive bodies where labour is particularly affected. That the removal of all old wall paper before placing on new be made compulsory.

On December 14, a labour deputation waited upon the Attorney-General for Ontario, and requested that the Ontario government enforce the order-in-council passed under section 31a the Factory, Shop and Office Building Act of 1914, which states: "No Chinese person shall employ in any capacity or have under his direction or control any female white person in any factory, restaurant or laundry."

School attendance of adolescents in Ontario

The issue of the *LABOUR GAZETTE* for June, 1919, contains a reference to the Adolescent School Attendance Act for Ontario. This Act was to come into force by proclamation. By a proclamation issued on July 13, last, section 3 of the Act will become effective on September 1, 1921, section 9 on September 1, 1922, and section 7 on September 1, 1923. The first of these sections requires that every adolescent between 14 and 16 years shall attend school for full time unless he is unable to attend by reason of sickness, infirmity, or other physical defects; or he has passed the matriculation examination of an approved university or has completed, to the satisfaction of the Department of Education, a course of study which may be regarded as the equivalent of the requirements of such examination; or he is in attendance at some other educational institution approved by the Department; or he is employed on the authority of a home permit or an employment certificate. Section 9 requires that every urban municipality with a population of 5,000 or over must, and other municipalities or school sections may, establish or maintain part-time courses for the education of adolescents between the ages of 14 and 18 years. Under Section 7, every adolescent between the ages of 16 and 18 years, unless excused for a special reason, must attend part-time classes for at least 320 hours each year, when such courses of instruction are established in the municipality in which he resides or is employed.

Investigation into rents in Winnipeg

The Manitoba Joint Council of Industry recently issued a report relating to rents in Winnipeg. This report is the result of investigations of 147 complaints made by tenants against their landlords; twenty apartment blocks being involved. The investigators in their report claim that there is no profiteering in rents in Winnipeg; that the rents charged for 1920-21, while appearing excessive, do not yield the owners of apartment buildings,

with certain exceptions, an exorbitant rate of interest upon their original investment, the average being 6.99 per cent; that the rents of apartment buildings were abnormally low during war years, indeed so low that in some cases owners lost money upon their investments and in others received a very low rate of return, and that while the advance is quite extraordinary and regrettably sudden, yet such advance does not allow an excessive return to the owner upon his original investment; that while rents are high in Winnipeg, the increase as between pre-war and present rates has not been excessive as compared with that experienced in other cities, the rate of increase in 60 other cities in the Dominion being 34.8 per cent and in Winnipeg 37.9 per cent. The investigations also showed that taxes absorb a larger proportion of the gross revenue than any other charge with the exception of fuel and depreciation, the percentage running from 7 to 24 per cent of the gross rentals in the cases submitted to the council. The report refers to the serious housing shortage and to the importance of constructing warm and weatherproof buildings; it states that a considerable amount of irritation between landlords and tenants might be prevented if more consideration were given to the rights of others in the way of landlords providing comfort in suites and dwellings, and tenants giving care to the property of the landlords. The report states that it is the intention of the Council to call a conference representative of all classes of citizens to consider the housing situation.

British Industrial Safety Conference

The *British Labour Gazette* for December states that a report has been issued of the proceedings of the British Industrial Safety Conference, organized by the Home Office and the British Industrial "Safety First" Association, and held on September 22, 1920. This report may be obtained from the Under Secretary of State, Home Office, Whitehall, London, S.W.1. It contains the

the following papers delivered at the conference:

"'Safety-First' and its Application in the Factory," by Mr. Gerald Bellhouse, C.B.E., Deputy Chief Inspector of Factories.

"The Safeguarding of Machinery, with special reference to Machine Tools," by Mr. G. Stevenson Taylor, O.B.E., Inspector for Dangerous Trades.

"First Aid in the Factory," by Dr. J. C. F. Bridge, F.R.C.S. (Edin.), Medical Inspector of Factories.

"Health, Hygiene, and 'Safety-First,'" by Mr. G. Havinden (Managing Director, "Delectaland").

"'Safety-First' at Port Sunlight," by Mr. C. K. Atkinson (Welfare Superintendent at Port Sunlight).

"Why and How we introduced 'Safety-First' Methods," by Mr. E. Hoult (Edgar Allen & Co.).

"Notes on 'Safety-First' Methods for a large Factory," by Mr. George Ralph (British Thomson-Houston Co.).

"Some Observations on a Practical Safety Scheme," by Captain Ingall (Loders & Nucoline, Ltd.).

"Lighting as an Aid to Safety," by Leon Gaster, F.J.I. (Secretary, The Illuminating Engineering Society).

Needle Trade Alliance formed in New York The Needle Trade Alliance, a new federation of clothing workers' unions, was formed in New York in December, following the rejection by the Amalgamated Clothing Workers of America of an ultimatum presented to the union by the Clothing Manufacturers' Association (see LABOUR GAZETTE, October, 1920, p. 1264). The new alliance is composed of the following unions: the Amalgamated Clothing Workers of America, the International Ladies' Garment Workers, the International Fur Workers' Union, the Journeymen Tailors' Union, and the United Cloth and Cap-makers' Union of North America. The only large union still remaining outside the Alliance is the United Garment Workers, an older but smaller body than

the Amalgamated Clothing Workers. The latter union still remains outside the American Federation of Labour, but it is considered that its affiliation is likely to result from the formation of the Alliance. The ultimatum of the Manufacturers' Association, referred to above, requires that "all workers shall individually be responsible for a daily standard of production to be agreed upon and calculated upon base rates prevailing in competitive markets, and that in the event of the failure of any worker to produce such standard of production the employer shall have the right to reduce wages *pro rata* or to discharge the worker substantially under-producing". The Amalgamated Clothing Workers decline to concede piece-work, a reduction in wages, and unlimited power on the part of employers to discharge workers, and maintain that "responsibility for proper production and costs rests by no means solely or even primarily with the union; let us, therefore, together explore the possibility for better production without trying to resort to the old brutal way of cutting wages as soon as there is a business decline."

Industrial fatigue and production

The effects of fatigue on the workers' rate of production are discussed in a recent report by the Industrial Fatigue Research Board of Great Britain (Report No. 9) upon the output in selected silk weaving factories during the winter months. Among the points held to have been established by the inquiry are the following: (1) Production is less both at the beginning and the end of the working day. (2) Continuous spells of work should not exceed about four hours. (3) Opportunities to obtain refreshment in the course of these spells, which would not necessarily involve a stoppage of machinery, might be given; in some cases where such opportunities are given the result has been satisfactory to the management. (4) Fatigue developed on one day is not usually carried over to the next day. (5) Production under artificial lighting falls by about 10 per

cent, even where such lighting is considered good, and every unnecessary hour under artificial lighting means a direct loss in production. Thus the output in the silk mills examined gradually increased from December to March, as the need for artificial lighting diminished. (6) Within a range of 58 to 65 degrees Fahrenheit, production increases with the temperature of the working room, but no relation was discovered between humidity and output.

Miners' training schools in South Africa

The October issue of the *Journal of Industries of the Union of South Africa* contains a report of the Government Miners' Training Schools in the Union. These schools, three in number, have had 689 apprentices sign their indentures and 154 pupils qualify since their opening in July 1911; of these 144 signed their indentures and 95 completed their course during 1919. Of those who did not complete their course a large number were compelled through domestic reasons to make larger earnings without delay; but most of these, the report states, have gone into the mines and their training has not been lost to the industry. The work in the schools is of a progressive nature, the apprentice doing the work himself during the first period after which he acts in the capacity of a supervisor and is taught to work with natives under similar conditions to those he will eventually be called upon to work under, thus acquiring self-confidence and ability while under the supervision of an instructor. Special attention is given to the health and welfare of the apprentices in the way of catering, physical culture, holding of athletic meets, issuing of certificates for red cross and first-aid work, etc. Lectures are given relating to the work actually being done by the apprentices, and embodying such subjects as will incite interest in the theory of mining which will lead them to continue their studies when they have left the schools, such as: stoping methods, support of hanging, rock drills, shaft work, explosives, drive timbering, sampling methods and calculation of tonnage. In

1919, 80 out of 84 pupils who presented themselves for examination on blasting were awarded certificates, and 54 others were awarded provisional blasting certificates after they had been underground from nine to twelve months. The report states that "managers of mines generally express satisfaction with the capabilities of the men employed by them who have passed through the schools."

Workers' Committee Act in Norway

The Workers' Committee Act recently passed by the Norwegian Odelsting, is applicable to all industrial enterprises numbering at least 50 employees, or connected with the railways, tramways, telegraphic or telephonic service. A Workers' Committee shall be appointed at the request of one-quarter of the employees, and the members shall be elected by workers over 21 years of age. The functions of the Committee will consist in the consideration and discussion of important alterations in the working of the business, general regulations concerning remuneration, the establishment of welfare institutions, etc. Before arriving at any decision in such matters, employers will be required to submit their plans to the Committee for approval. The Committee is entitled—or if either party wishes it, obliged—to mediate in all conflicts arising out of the conditions of labour or the dismissal and departure of workers. The Act will come into force immediately.

Eight-hour day in Holland

According to the *Gazette de Hollande*, the new Labour Act which came into force in Holland on October 24, provides for an eight-hour day and a forty-five hour week in all factories and work shops, but does not apply to offices, to agriculture, horticulture, forestry, or mining, while the stone industry and dock labour will be the subjects of special legislation. Sunday work is forbidden for youths and women; and in the case of men may be allowed by special arrangement, subject to the authority of the Minister of

Labour or of the Chief Inspector of Labour of the district; Saturday work after 1 p.m. is governed by the same conditions. The day's work must not begin before 7 a.m. or finish after 6 p.m., a special permit being required for overtime and for night work. In exceptional circumstances the Chief Inspector may allow an extension of work up to a maximum of eleven hours a day in the case of men and up to ten hours in the case of women and youths over 16, but the provisions of the Act limiting the number of hours does not apply to managers or sub-managers, to foremen or overseers in charge of the hands. Child labour under 14 years of age is absolutely forbidden. Night work is also generally prohibited in bakeries, even in the case of the master. Every factory or workshop must show the regulations governing the work there, and returns must be in duplicate and a copy sent to the Inspector's office. Registers must be kept in every establishment employing one or more women or youths or more than five men, and must show the names of all persons employed. The head or manager of a business must have in his possession a workman's card signed by the Burgo-master of the district or his substitute for every man or woman over 16 years of age.

**Roumanian law
for settlement
of industrial
disputes**

A bill for the settlement of industrial disputes was passed by the Roumanian parliament in August last. The bill provides that no strike or lockout may be declared in establishments employing 10 or more workers, without first submitting the question at issue to a board of conciliation consisting of representatives of the workpeople, the employer, and an official from the Ministry of Labour. Employers are required, and workers are empowered, to notify the occurrence of a dispute; and the Minister of Labour may, on his own initiative, intervene. If a settlement is not effected by conciliation, arbitration may be used, and is compulsory in the case of Government establishments, transport

service by land, sea or air, petroleum wells, coal mines, natural gas storage, gas and electricity works, waterworks, flour mills, bakehouses, slaughter houses, road maintenance, scavenging and hospitals. The decisions of a conciliation board are binding for at least six months if a longer period is not specified, and of an Arbitration Court for at least six months, and afterwards unless and until the parties decide otherwise. The Arbitration Court must be composed of an equal number of representatives of employers and workers. Provision is made for widening the scope of the proceedings and altering the constitution of the Arbitration Court, so that the decisions may be made applicable to all local establishments similar to those involved in the initial dispute. Penalties for using or threatening violence for the purpose of forcing anyone to work or to abstain from working in connection with a collective stoppage are provided for in the law. All forms of sabotage including the withholding of production, are punishable.

**International
congress of
farm workers**

About 2,100,000 farm workers were represented at the first International Congress of Land Workers held at Amsterdam in August last. These included 360,000 British, 780,000 German, 20,000 Swedish, 30,000 Danish, 51,000 Austrian, 1,700 Belgian, 845,000 Italian, and 15,000 Dutch. The *Wages Board Gazette*, which contains an account of the congress, states that it is estimated that only 10 per cent of the Italian and 30 per cent of the German workers are in their respective unions, while 50 per cent of the agricultural labourers of Great Britain are enrolled. Seven delegates were present from the United Kingdom representing the National Union of Agricultural Workers, the Workers' Union, and the Scottish Farm Servants' Union. Mr. Hiemstra, secretary of the Dutch Land Workers' Union, was chairman. Resolutions were passed against war, and in favour of land nationalization. Other matters were left for discussion till the conference on

agricultural labour questions which will be held in Geneva in April. Mr. W. R. Smith, M.P., a British delegate, was chosen as the first president, and Mr. P. Heimstra (Netherlands) as secretary. The other members appointed on the executive are: Herr D. Lewinson (Scandinavia), Signora de Altobelli (Italy) and Herr G. Schmidt (Germany).

Jottings

The Government has appointed Mr. Loring Christie, legal adviser of the Department of External Affairs, to act in the place of the Minister of Labour as Canada's representative on the Governing Body of the International Labour Organization at Geneva on January 11. Mr. Christie was already in Europe having been in official attendance on the Canadian delegation to the meeting of the Assembly of the League of Nations.

By regulation 93, of the Workmen's Compensation Act of Ontario, passed on December 14, 1920, coal, wood and lumber yards, and the builders' supply businesses came under the operation of the Act, in Class 20, on January 1 of this year.

Plans for the drafting of a completely new Workmen's Compensation Act for the province of Quebec were started at a special meeting of the Montreal branch of the Canadian Manufacturers' Association, attended by the Provincial Deputy Minister of Labour, members of the Legislation Committee of the Canadian Manufacturers' Association, representatives of employers and of labour organizations. It is proposed that the new law should provide for the appointment of an administrative board so as to avoid legal costs.

The Community Halls Act, 1920, of Ontario, provides that financial assistance may be given rural communities by the government for the establishment of community halls or athletic fields; the government, providing 25 per cent of the cost, but the grant must not exceed \$2,000. These halls and fields shall be under the direction of a Board of

Management which shall be appointed by the Council of the municipality.

The government of Manitoba is collecting data with a view to establishing group insurance for the civil servants of the province. It will affect about 1,300 employees.

Classes in steam engineering and shop arithmetic are being conducted by the Algoma Steel Corporation for their employees. It is the intention of the corporation to promote its own men to higher positions when vacancies occur. Two additional classes, one dealing with the theory of coke making and the other with the theory of transportation may also be opened shortly.

At a meeting of the National Joint Industrial Board of the Building Industries, held at Montreal on January 4, a system of apprenticeship in Canada was outlined, providing for the establishment of a national apprenticeship council of the building industry. This council would have advisory and supervisory functions, and would issue forms of indenture for each trade. Boys would be apprenticed to employers, who would engage to give their apprentices the fullest opportunity to learn efficiently their respective trades.

At the recent convention of the International Printing Pressmen and Assistants' Union of North America it was decided that the international board of directors should be increased by one member who shall also be a member of a Canadian local organization.

The report of the British Ministry of Transport on the accidents which occurred on the railways of the United Kingdom during the year 1919, shows that the fatalities totalled 932, compared with 870 in the previous year. Of the 932 persons killed during the year 98 were passengers, 377 were railway and contractors' employees, while 457 were "other persons" (including trespassers, etc). The number of persons injured on the railways in 1919 was 23,983.

The Ford Motor Company, of Detroit, Michigan, announce the distribution to its employees, on January 3, of \$7,000,000 in bonus cheques. About 60,000 workmen will participate. It is also announced that most of the plants which have been closed for some time will resume operations on that date. The bonuses for last year exceeded \$10,000,000.

A bill providing for the barring of immigrants for one year has been passed by the United States House of Representatives and is now before the Senate. Brothers and sisters of alien immigrants now resident in the United States are exempted from the provisions of the bill.

The "House of Representatives" of the Riverside and Dan River cotton mills of Danville, West Virginia, which represents approximately 5,000 operatives, has passed a "bill" calling for a 15 per cent reduction in the wage scale and the abolition of the customary 10 per cent bonus paid weekly for full time.

The United Engineering Societies of the United States, a recently formed organization of which Mr. Herbert Hoover is the first head, has proposed a policy of co-operation with labour for the purpose of increasing the efficiency of the industries, eliminating wastes and making a study of means to promote the social welfare. Mr. Gompers, as head of the American Federation of Labour, has declared his sympathy with the proposal and his wish to co-operate.

A strike insurance company (the Deutsche Streikschutz) has been formed in Berlin, Germany, "to mitigate the economic consequences of unavoidable strikes by helping its members to bear the losses arising therefrom." Its members must belong to the Federation of German Employers' Associations. Compensation depends upon whether the strike is justified or not, the decision devolving upon the employers' association.

INDUSTRIAL CONDITIONS DURING DECEMBER, 1920

I.—General Review

A further marked decline in the total average volume of employment throughout Canada was reported in December, the losses being widely distributed over all the Provinces, although in Nova Scotia and New Brunswick conditions were favourably affected in the first half of the month by the opening of the winter ports. The Metals, Machinery and Conveyances group of trades was seriously and widely depressed, the decline in activity being most marked in the railway car and shipbuilding sub-groups, and in the crude rolling and forging divisions. In British Columbia, however, the shipbuilding industry was

fairly active. In the Food and Liquor group also a general decline was noted, especially in the milling industry in Ontario, the abattoirs and packing houses in Quebec, Ontario and the Prairie Provinces, and in the biscuit and confectionery establishments in the Maritime Provinces and Ontario. The Textile and Clothing industries continued to record substantial declines, especially in the garment, thread, yarn, cloth, hosiery and knitting factories of Ontario and Quebec. Declines were also fairly general through the Pulp and Paper industry, the staffs in many mills in Quebec and Ontario being largely reduced. The Woodworking, and Clay, Glass and Stone groups continued to

show a decline, especially in trades supplying materials for Building and Construction, in which operations were for the most part closed for the season. Employment in connection with Transportation, both on railways and by water, was slightly less than in the preceding month, although some additional activity was noted in the second week in the zone of the Maritime ports. The Mining (other than Coal) group was less active, especially in the copper, gold, silver, zinc and non-ferrous metallic ore industries of British Columbia. The coal mining industry showed some gains in the first half of the month, followed later by slight losses. The usual period of seasonal slackness further affected the sawmills, but work in the woods, though much below its normal activity, gave increased employment, except in British Columbia, where the downward movement continued.

The loss of time on account of industrial disputes was less during December than during November, 1920, or December, 1919. There were

Strikes

in existence at some time or other during the month, 10 strikes, involving about 1,554 workpeople and resulting in a time loss of 14,654 working days, as compared with 20 strikes, 1,959 workpeople and 23,442 working days in November, 1920; and 22 strikes, 3,296 workpeople and 51,853 working days in December, 1919. On December 1, there were on record seven strikes, affecting 829 workpeople. Three strikes were reported as having commenced

during December, as compared with 10 in November. Three of the strikes commencing prior to December and the three disputes commencing during December were reported terminated, leaving 4 strikes, involving 379 workpeople on record at the end of the month.

The movement of prices continued to be downward. There were the usual seasonal advances in

Prices

eggs, while in butter, cheese, and milk there were some decreases, which is unusual for December, but due to some extent to the mild weather prevailing. The index number of wholesale prices was down to 290.5 for December as compared with 304.2 for November, 322 for December, 1919, and 137.6 for December, 1914. The chief decreases for the month were in grain, livestock and meats, textiles, hides, and leather, iron, building materials, and in raw furs. In retail prices the average cost in sixty cities of a list of staple foods at the middle of December was \$14.84 as compared with \$15.32 at the middle of November, \$14.73 in December, 1919, and \$7.96 in December, 1914. The chief decrease for the month was in sugar, but there were substantial declines in meats, with slight decreases in nearly all of the twenty-nine articles included. Eggs showed average advances of from 3c. to 7c. per dozen according to grade, and potatoes averaged 6c. per bag higher. Coal showed some slight reductions as well as some increases and averaged lower, but wood was slightly higher.

II.—Industries and Trades

The steel industry of Nova Scotia continued seriously depressed during December as the result of the strike of the railway employees of the steel companies. The month's production at SYDNEY was as follows: pig iron, 3,300 tons; ingots,

Metals and Machinery

7,500 tons; blooms and billets, 4,000 tons; wire rods, 3,500 tons; plates, 750 tons; wire, 120 tons; nails 1,540 tons; only one blast furnace was in operation. At the SYDNEY MINES plants production of iron and steel was suspended entirely, the railway employees being on strike at both plants. At AMHERST the

machine shops were very quiet; the iron foundries were busy during the first half of the month, but quiet later, some plants working half time and others shutting down for the holidays [or for repairs; malleable iron workers were steadily employed. At MONCTON the foundry and machine shops were busy except during the usual period of stocktaking. At CHARLOTTETOWN electrical workers, blacksmiths and other metal trades were active. The foundries and machine shops at FREDERICTON ran full time. The rolling mills at ST. JOHN ran steadily during the month and the tin and sheet metal trade was well employed, but the nail factory closed down indefinitely. At MONTREAL the structural steel and engine and boiler factories were quiet, but sheet metal workers were fairly active and the electrical trades were normal. QUEBEC reported slack conditions in the architectural and structural steel plants, but stove and furnace foundries were very busy. At SHERBROOKE the metal industries, except architectural and structural steel, were quiet, one machinery plant closing down. At THREE RIVERS foundry workers were well employed. Metal and machine workers at ST. HYACINTHE were well employed during the month. The metal trades at SOREL were fairly active. At OTTAWA and HULL the iron and steel foundries were fairly active, no employees being laid off; at the Royal Mint, one quarter of the staff worked overtime until Christmas. At TORONTO the metal trades continued quiet with a large proportion of men out of work; the machinery and machine tool trades though still below normal, showed some improvement; electrical work was quiet, but farm implement factories were fairly active. At HAMILTON some steel and farm implement workers were laid off during the month, but foundries were for the most part active, and bridge and structural steel workers were well employed. The metal working industries at NIAGARA FALLS continued busy, the chain works running overtime. At PORT ROBINSON the chain works laid off a number of men. The metal trades at

ST. CATHARINES continued quiet, but most of the men, it was reported, found other employment, being for the most part unskilled workers; boilermakers and electrical workers were well employed. Activity in the metal trades at BROCKVILLE slowed down during the month, stove and furnace work being unusually slack, but tinsmiths and sheet metal workers were busy; the tool and hardware trades were fairly active; at one plant, to avoid unemployment, furnace moulders were transferred to the hardware department. Portable engine, boiler and general foundry workers at BELLEVILLE were active throughout the month; temporary unemployment resulted from the closing of one large and several small steel plants; hardware and lock plants were steadily active. PETERBOROUGH reported slacker conditions in the foundries, one foundry closing down and two others working with reduced staffs on short time; a farm implement factory closed indefinitely and a lock factory shut down for a week towards the close of the month; machine shops with one exception were quiet, some workers being laid off; electrical workers were fairly active in some departments. GALT reported some depression in the metal trades; machine shops worked four to five days a week, closing entirely for the holidays. At BRANTFORD engine, machinery and farm implement factories were busy; electrical apparatus plants were only fairly active, workers being laid off in some departments; the stove and furnace plant was slack, staffs being temporarily reduced. KITCHENER reported some unemployment in the foundries and machine shops, but electrical fixture, farm implement, engine and thresher plants were fairly active. GUELPH reported rather depressed conditions throughout the metal group; foundries ran part time or closed down; the malleable iron and stove factories also closed, but hardware workers were well employed. At STRATFORD activity slackened towards the close of the month, though the electrical trades continued normal. The stove foundry at WOODSTOCK closed for the last week of

the month. LONDON reported steady conditions in the rolling mills, and in the concrete machinery, threshing machine and engine, sprayer and wire and iron works; slackness was noted in the stationary engine and boiler shops and stove factories, about 300 workers being laid off in the latter, although the tin-shop department was busy; factories for washing machines and force pumps were very quiet, half the staffs being laid off and short hours worked; the brass factory closed down for two weeks. The structural steel industry at CHATHAM was steady. At ST. THOMAS iron foundry workers had a rather quiet month. WINDSOR reported some slackness in the metal roofing and sheet metal industry; the injector plant continued active, though a cut in wages was contemplated; machine shops also were still busy. At OWEN SOUND the machine shops were fairly active and the stove foundry was normal. The steel plant at SAULT STE. MARIE closed down on December 24, laying off 2,600 men for an indefinite period. At WINNIPEG all workers in the metal industry were reported fairly well engaged. The machine shops at BRANDON continued busy. Iron workers at LETHBRIDGE had a quiet month. At EDMONTON conditions were rather slack in the iron and steel trades. VANCOUVER reported considerable unemployment in the rolling mills, structural iron and steel and electrical factories; the metal roofing and sheet metal trades were not very busy. Unemployment increased at NEW WESTMINSTER in the machine shops, but the electrical trade was normal. At VICTORIA sheet metal and electrical workers had a quiet month but foundries were fairly active.

The boat and shipbuilding industry at SYDNEY was quiet during November and railway repair shops

Vehicles (land and water) were less active. The car and foundry works at AMHERST were very busy, except for the holiday period. At CHARLOTTETOWN the railway shops ran steadily, although temporary employees were laid off for winter. The Canadian National car shops worked steadily until

December 24, when they closed for a week, work being resumed on a 40-hour week basis, with Saturdays off, this arrangement being agreed upon as a preventive of unemployment, to continue till April 1. The engine and railway shops at MONTREAL had a quiet month, especially during the holiday season. At QUEBEC the locomotive and car shops were quiet; boat and shipbuilding and repairing yards were very dull; automobile and carriage works were seasonally slack. Staffs were reduced in the shipyards at THREE RIVERS. The railway repair shops at SHERBROOKE were fairly active. Iron shipyard workers at SOREL had a quiet month. Staffs were reduced in the car shops at OTTAWA and HULL. At TORONTO work was restarted on two vessels under construction, but union men refused to accept the wages offered, being less than the union rates; the automobile industry was much depressed owing to over-stocking, but the removal of the luxury tax was expected to effect an improvement; the men employed in the shops of the Canadian National Railways at Leaside decided in favour of a week's holiday at Christmas and a 5-day week during the next three months in order to prevent the reduction of staffs. The steel car works at HAMILTON were active. At BROCKVILLE the motor car factory worked only about half time; one factory was busy turning out delivery sleighs. The locomotive works at KINGSTON were busy with the average number of men employed; about 250 men were employed at the shipbuilding yards. At BELLEVILLE the factory for automobile parts and motor cycles had a fairly busy month. At BRANTFORD a malleable iron plant was busy in the manufacture of car parts; sleigh, cutter and wagon factories were active. At KITCHENER workers in the motor truck and bicycle factories were laid off in the latter part of the month. The spring and axle factory at GUELPH ran full time. At STRATFORD a number of men were laid off in the Grand Trunk repair shops in the last week of the month. The wagon factories at WOODSTOCK

closed for annual stocktaking. Many men were laid off at LONDON in the railway round houses and car repair shops. The automobile industry at CHATHAM was very slack, only one-eighth of the regular staffs being retained. At ST. THOMAS over 200 railway shopmen were reported unemployed. WINDSOR reported serious slackness continuing in the automobile industry, several plants running only 4 days a week. At WINNIPEG the railway shops were fairly busy; automobile repair shops had a slack month. The engine shops at BRANDON continued busy. Staffs were reduced in the railway shops at REGINA. Railway repair shops at CALGARY and EDMONTON were quiet, staffs being further reduced. VANCOUVER reported slack conditions in the engine, boiler and car shops; one shipyard was busy, but another practically closed down for want of steel. Staffs were reduced in the railway shops at PRINCE RUPERT. The iron shipyards at VICTORIA were fairly active, and wooden shipbuilders were well employed, the first of four vessels under construction being launched early in the month; railway repair shops were moderately active.

Activity in the food group was generally stimulated during December by the Christmas season.

**Foods, liquors
and tobacco**

At SYDNEY the abattoirs, meat packing houses, bakeries and confectionery plants were active, but the soft drink trade shared in the seasonal slackness general in the industry; the fisheries were reported quiet. CHARLOTTETOWN reported employment very good in abattoirs and packing houses; bakers and confectioners, creamery, flour mill and tobacco workers had a good month. At ST. JOHN the flour and feed mills continued active; the sugar refinery remained closed during the month, but was to reopen early in January; bakeries were normally active and creamery, dairy and brewery workers were fairly well employed, but confectionery and soft drink workers had a dull month. At MONCTON the biscuit factory was unusually busy, 250

workers being employed at one period, the usual staff numbering 160; bakeries were all active; cheese and butter factories ran part time, as is usual during the winter months. Bakers and confectioners at FREDERICTON were very busy. At MONTREAL flour and feed, abattoir and packing house workers were fairly active; bakers and confectioners had a busy holiday season; brewery and soft drink workers were well employed and cigar makers had a fair month. QUEBEC reported the usual seasonal slackness in abattoirs and packing houses, the farmers killing and selling their own meat; bakers were very busy for the Christmas trade; breweries, creameries and dairies were active, but cigar factories were quiet. At SHERBROOKE abattoirs and bakeries were fairly busy, but quiet conditions prevailed in breweries, soft drink and tobacco factories and creameries. ST. HYACINTHE reported activity in the flour mills and bakeries, but cigar factories were quiet. At THREE RIVERS breweries, cigar and soft drink factories had a busy month; the fisheries were very quiet. OTTAWA and HULL reported shipments to abattoirs very light at this season; bakers and confectioners had the usual brisk Christmas season; dairy workers were normally employed. At TORONTO flour and cereal production was steady; abattoirs and packing houses worked at greatly reduced capacity, on account, it was stated, of the falling away of export trade; bakers and confectioners had an active month, with experienced chocolate dippers in demand; cigar makers were fairly active. At HAMILTON, ST. CATHARINES and BROCKVILLE similar conditions were noted, employment being generally fair throughout the group. KINGSTON reported some slackness in confectionery establishments, but bakeries, flour and feed plants were active; the tobacco industry was dull. At BELLEVILLE one flour and cereal mill closed down temporarily; bakers and confectioners and dairies had a busy holiday season. PETERBOROUGH reported general activity throughout the food group. The flour mill at GALT continued running full

time, and bakers and confectioners were busy, but the creamery closed down. BRANTFORD reported employment good in all branches. The sugar factory at KITCHENER ran day and night shifts; flour mills and meat plants worked full time; bakers were busy; biscuit and candy factories and creameries were fairly active, but breweries were less active and soft drink and tobacco factories were dull. The flour mills at GUELPH closed for lack of orders but the feed mills were busy; bakers and confectioners were dull, but breweries were quiet. STRATFORD reported general activity among workers in the food group. At LONDON slackness was noted in the milling, cereal, biscuit and candy factories, and all hands were laid off at the cigar plants. The flour mill at St. THOMAS worked steadily, and chocolate workers were fairly active. At CHATHAM the flour and feed plants closed down, but the sugar refinery ran continuous shifts. Conditions were reported at WINDSOR to be generally good. At OWEN SOUND normal conditions prevailed except in the creameries, which were affected by shortage of supplies. At WINNIPEG bakers were fairly busy, but confectioners had a quiet month, some working short hours or with half staffs and others practically closing down; vegetable canners were slightly more active than last year; breweries and soft drink plants ran steadily; abattoirs and packing houses were extremely quiet, with only about half their staffs working. The flour mills at LETHBRIDGE were affected by the decline in export trade; brewery workers were steadily employed. Flour and feed plants and breweries at CALGARY were very quiet, but bakers and confectioners were exceptionally active. Short time was worked in the biscuit factory at EDMONTON. At VANCOUVER creameries, dairies and breweries were busy, and flour, feed and cereal workers fairly busy; sugar refinery workers were fairly active, as were also abattoirs and meat packing houses and tobacco factories; bakers and confectioners were busy on the Christmas trade; fruit and vegetable canneries closed down. NEW

WESTMINSTER reported steady employment in abattoirs and packing houses; breweries were very busy, and cigar makers were active. VICTORIA reported the feed and cereal mills steadily operating; bakers and confectioners were busy on holiday trade; breweries were active, but soft drink and cigar workers were slack.

The woollen mills at AMHERST had a very dull month, some departments closing down and half the usual staff being laid off. At TRURO the woollen mills shut down for the last week of the month, but were expected to be running in the new year with longer hours. The cotton mills at St. JOHN started a 4-day week schedule on December 17. The cotton factory at FREDERICTON ran only four days a week, about 500 workers being affected. The woollen and knitting factories at MONTREAL were fairly busy, but tent and sail makers were quiet. At QUEBEC the cotton mills were fairly active though not so busy as in previous months; tent and sail makers were very dull. SHERBROOKE reported quiet conditions in the cotton mills and bleaching, dyeing, finishing and printing textile plants; woollen, hosiery, underwear and knitting mills were fairly active. At St. HYACINTHE the woollen and knitting mills were rather slack. At THREE RIVERS the cotton factory employed about 1,400 workers. TORONTO reported the woollen and knitted goods industries quiet, with only light orders on hand; hosiery workers were fairly well employed; the carpet, tent, awning and sail trades were slack. At HAMILTON knitting, hosiery, whitegoods, carpet, tent and sail factories were fairly active, though working on short time. The cotton factory at CORNWALL curtailed the working week from 50 to 36 hours. The woollen, silk and knitting mills at St. CATHARINES continued busy. Textile workers at KINGSTON had a fairly busy month. At PETERBOROUGH the woollen mills worked short time with reduced staffs, but knitting and underwear workers were steadily em-

**Textiles,
cordage and
carpets**

ployed; carpet weavers worked on short time. The cotton and woollen mills at GALT worked steadily but silk workers were on short time. At BRANTFORD the woollen mills were rather quiet; hosiery operatives were fairly well employed, but a few were laid off; the silk mill was busy and the cordage factory was very busy. KITCHENER reported rather quiet conditions in the knitting, felt and twine industries. At GUELPH the cotton, woollen and linen spinning mills, and hosiery and knitted goods factories were fairly busy, but the carpet and rug mills were shut down. At STRATFORD the woollen and knitting mills were fairly active. The knitting factories at WOODSTOCK continued running; at one factory the management announced that bonuses would be discontinued, so as to enable employment to be more continuous. At LONDON two hosiery factories closed down for three weeks and another was very slack; the woollen and underwear plants laid off many of their workers. The woollen factories at CHATHAM closed down; the pad plant operated steadily with reduced working hours. The knitting mills at ST. THOMAS were fairly busy. The hosiery industry at OWEN SOUND suffered from unquiet market conditions, and the tent factory was also very quiet. Bag factories at WINNIPEG were quiet, though a full staff was retained at the largest plant; the knitting factory remained closed for half the month; the tent and awning industry was dull, staffs being reduced. At VANCOUVER the knitting mills and tent, awning and sail factories were slack. At NEW WESTMINSTER the new cordage factory opened during the month, 15 or 20 men being employed.*

Steam laundries at SYDNEY continued active. The hat, cap and shirt factories at TRURO were closed during the last half of the month. CHARLOTTE-TOWN reported normal activity among garment and boot and shoe makers, but tailors had a rather dull month; laundries and

dyeing plants were active. At ST. JOHN clothing workers had increased employment, owing, it was said, to the fall in prices; laundries were busy, owing to the opening of the winter port. The shoe factory at FREDERICTON slowed down during the month, and larrigan workers were also quiet; tailors were busy. At MONTREAL the ready-made clothing trade was very dull, hours and wages being reduced; hat, cap and whitewear factories were fairly active; but laundries were decreasingly active; boot, shoe and rubber plants were quiet, though the adoption of short working hours reduced the amount of unemployment somewhat. Slack conditions were noted at QUEBEC in the hat, cap and fur trades, and especially in ready-made clothing, women's whitewear and boots and shoes; laundries, dyeing and cleaning plants were also quiet. At SHERBROOKE fair activity was noted in ready made clothing, steam laundries, dyeing and cleaning establishments, but the boot and shoe industry was dull. The ready-made clothing and corset industries at ST. HYACINTHE were rather dull, many workers being laid off temporarily; laundries were active. Laundries, dyeing and cleaning plants at THREE RIVERS were fairly active. The cuff and collar factory at ST. JOHN'S and IBERVILLE closed down for the holiday season. The clothing trade at SOREL was active. The clothing industry at HULL was very dull, factories closing down for some weeks. TORONTO reported the ready-made clothing and women's whitewear trades working much below capacity, but towards the end of the month a slight improvement was noted, experienced workers being in some demand, though there was still much unemployment in the industry; the boot and shoe industry continued quiet. At HAMILTON the ready-made clothing trades worked a 4-day week. The clothing industries at NIAGARA FALLS were active, and laundries were busy. Laundries at ST. CATHARINES continued active. At BROCKVILLE the hat industry was rather quiet pending completion of extensions of plants; the glove factory was active in the first part of the

*This factory is operated by returned soldiers. (See LABOUR GAZETTE, December, 1919, page 1373.)

month, closing later; fur workers were well employed. Hat workers at BELLEVILLE were well employed, and steam laundries and dyeing establishments active. At PETERBOROUGH activity was noted during the first half of the month in the women's whitewear and children's clothing trades, but the closing weeks were quiet. Shoe workers at GALT were rather more active, but the factories closed for the holiday week. At BRANTFORD women's clothing workers were very slack, and the overall and shirt factory practically closed. At KITCHENER the robe, clothing, shirt, collar, button and rubber shoe factories were all closed for a considerable part of the month; glove workers were fairly busy, and laundries ran full time; the boot and shoe trades were dull. The women's whitewear industry at GUELPH was dull. At STRATFORD ready-made clothing workers were rather quiet, but laundries were active. The costume factory at LONDON closed for a week; the men's and boys' clothing factory laid off a number of workers, and the boot, shoe and cap factories were also very slack. The shoe factory at St. THOMAS was fairly busy. At WINDSOR the laundries had a good month, but dry cleaners laid off nearly all their staffs. The whitewear factory at OWEN SOUND closed down for the last half of the month. At WINNIPEG ready-to-wear concerns were very quiet, one plant closing temporarily; shirt factories worked with only half staffs and on half time; one factory shutting down; the cap, glove and whitewear industries were similarly depressed; laundries were fairly busy, but cleaners reduced their staffs and worked short hours. Laundries at CALGARY had a normal month. The garment factory at EDMONTON closed down for a three-week period, 250 female and a few male workers being affected. At VANCOUVER all lines of the clothing trade were reported slack, several factories practically closing for a short time; laundries were fairly busy. The shirt and overall factories at VICTORIA were quiet, closing for two weeks at the end of the month; steam laundries and dyeing and cleaning establishments were fairly active.

The pulp and paper industry generally showed a downward tendency during December. In the Maritime Provinces staffs were slightly reduced in the New Brunswick mills

Pulp, paper and fibre

including those at St. JOHN and BATHURST, but steady conditions were maintained in the MURRAY and LIVERPOOL mills in Nova Scotia. In the Province of Quebec, slight gains over the previous month in the numbers employed were noted at HULL and CAP MAGDELAINE; conditions were steady at WINDSOR MILLS and KENOGAMI, while reductions in staffs occurred at THREE RIVERS, SHAWINIGAN FALLS, CHANDLER, CHICOUTIMI, EAST ANGUS, and LA TUQUE. In Ontario declines were recorded in the pulp and paper mills at SMOOTH ROCK FALLS, HAWKESBURY, THOROLD, ESPANOLA, STURGEON FALLS, IROQUOIS FALLS, TORONTO, and SAULT STE. MARIE, but conditions continued steady at CORNWALL and OTTAWA; the mills at MERRITTON closed at the end of the month for an indefinite period. In British Columbia the pulp and paper mills at POWELL RIVER and OCEAN FALLS were operating steadily.

Steady conditions of employment continued throughout the month in the printing and publishing trades at SYDNEY, AMHERST, and CHARLOTTETOWN. At St. JOHN the printing and binding trades were active, but

Printing, publishing and paper goods

paper box factories were slack, one factory closing down at Christmas. The printing and publishing trades were active at MONCTON and FREDERICTON. At MONTREAL some decline of activity was noted among printers, bookbinders and lithographers. Box and bag factories at QUEBEC were quiet, but printers were busy there and also at St. HYACINTHE and THREE RIVERS. At OTTAWA and HULL lithographers and printers were busy, but binderies and engraving plants were slack, working a 40-hour week, with staffs reduced 25 per cent. At TORONTO the printing, bookbinding and allied trades were fairly active,

especially during the Christmas season. The printing and allied trades were reported busy at NIAGARA FALLS, ST. CATHARINES, BROCKVILLE, KINGSTON, BELLEVILLE, PETERBOROUGH and GALT. At BRANTFORD the printing shops were busy and paper box makers were active, though a slacker period was anticipated. At KITCHENER some job printers were unemployed; the paper box factory closed down for the holiday season. Printers and box makers at GUELPH were fairly busy. The printing and allied trades were well employed at STRATFORD, WOODSTOCK and ST. THOMAS. At LONDON job printers were busy, but newspaper shops were less busy, though staffs were not reduced; lithographers were slack, and the paper box factory shut down for two weeks. At WINDSOR the box factory took on extra help for the Christmas rush; newspaper shops increased their staffs by over 20 printers during the past three months and were busy throughout the month; job shops were quiet in the first week, but were very busy during the Christmas rush. At WINNIPEG the printing trades were less than normally active; newspaper shops were fairly busy but a number of job printers were out of work; paper box factories were very slack, staffs being reduced by about half; bookbinders had a good month, without change in staffs; the box factories were busy with Christmas trade, but were quiet as the month closed. The printing and allied trades were busy at LETHBRIDGE, and fairly well employed at CALGARY. VANCOUVER reported employment conditions good in the printing and paper box and novelty trades. Activity was noted at PRINCE RUPERT among printers. At VICTORIA the newspapers and job printing plants were active, but the engraving trade was dull; paper box factories were fairly active.

The sash and door factories and planing mills at SYDNEY continued active.

At AMHERST the woodworking factories ran steadily. **Woodworking and furniture** CHARLOTTE-TOWN reported a busy month in the planing mills and cooperage plants, but broom factories were rather quiet. At ST. JOHN, the sash, door and planing mills were active and broom and brush factories were busy. The mills at MONCTON were in active operation, and at FREDERICTON there was no indication of the temporary closing usual in winter. At MONTREAL wooden box and furniture workers had a fair month; piano factories were also fairly busy. QUEBEC reported dull conditions in the sash, door and planing mills; the largest wooden box factory in the district was destroyed by fire, but the others were busy; furniture and chair workers had a dull month. At SHERBROOKE the planing mills and chair factories were quiet, but at THREE RIVERS these industries, as well as toy making were reported busy. At OTTAWA and HULL the washing-machine plant worked with only 20 per cent of the staff employed, and only a 30-hour week; the piano industry was unusually quiet, though showing signs of improvement; broom factories were temporarily shut down. At TORONTO the sash, door and planing mills were less active than in the previous month; furniture workers and upholsterers were fairly well employed; phonograph and piano factories were quiet, but an increase in activity was anticipated following the removal of the luxury tax. The furniture factories at HAMILTON were quiet, working short time with reduced staffs; similar conditions prevailed in box and other woodworking factories. Woodworkers were reported fairly active at NIAGARA FALLS and ST. CATHARINES. At BROCKVILLE the sash, door and planing mills were rather quiet, but the office furniture factory was busy for most of the month. KINGSTON reported very quiet conditions among woodworkers; the piano factory which was running with reduced staff, closed down for two weeks for stocktaking. The

sash, door and planing mills at BELLEVILLE had a good month owing to the continuance of building operations. At GALT the planing mills were slack and some furniture factories closed down. BRANTFORD reported employment fairly good in the planing mills, but piano and victrola case-makers had a dull month. Fair conditions prevailed at KITCHENER in the sash, door and planing mills and wooden box factories; furniture and chair factories closed down for a week or longer; office furniture and fixture factories were active but other furniture industries as well as broom, woodenware and cooperage plants were quiet. At GUELPH the sash, door and planing mills were fairly busy, but the piano, organ and sewing machine factories shut down. STRATFORD reported activity during the first part of the month in the planing mills, with help in some demand, but conditions were quiet later. At WOODSTOCK the furniture industry was very dull; the organ industry was rather quiet, except in one factory for pipe organs for theatres; the piano trade was also quiet. LONDON reported some activity in the planing mills, though one mill closed for ten days; slackness continued in the handle and casket factories, the cooperage plant closed temporarily and the piano factory reduced its staff. At WINDSOR the piano factory resumed operations, with 80 per cent of their former employees engaged. OWEN SOUND reported normal conditions in the sash, door and wooden box factories; the broom, woodenware and cooperage factories were very quiet and the furniture and chair factory closed down temporarily. At SAULT STE. MARIE the planing mills were reported practically idle, building operations having ceased. WINNIPEG reported that the planing mill and box factories had a very dull month, with their employees working three days a week; sash and door factories continued to work with their normal staffs. Sash and door factories were busy at BRANDON, but at CALGARY this industry was reported quiet, and at FERNIE the mills were practically idle. VANCOUVER reported general slackness in sash, door, planing mills and all

woodworking trades. At VICTORIA dullness was noted in the planing mills and box factories, but the wooden toy factory was active on the Christmas demand.

The trunk and bag industry at AMHERST was steady throughout December. The tannery at

Leather and rubber (other than clothing) ST. JOHN was busy. Harness makers at FREDERICTON were active.

At MONTREAL the tanneries, trunk, bag, harness and rubber factories had a quiet month. The tanneries and trunk factories at QUEBEC were quiet. At ST. HYACINTHE the tannery worked only part time, but at SOREL tannery workers were reported active. OTTAWA and HULL reported the saddlery trade dull, 30 men having been laid off in the past two months. At TORONTO the trunk, bag, harness and rubber industries continued much depressed. The trunk, harness and leather goods trades at HAMILTON were slack. Rubber plants at ST. CATHARINES worked steadily. Harness makers at BROCKVILLE were fairly active, but other leather workers were quiet. At KINGSTON the tannery which had been running with staff much reduced, shut down for the last week of the month. Employment among leather workers at PETERBOROUGH continued slack. KITCHENER reported both tanneries running full time, but trunk and bag factories reduced their staffs, and the tire factory ran with only one-third of its normal crew. Tanneries and harness shops at STRATFORD were fairly busy. The tannery at LONDON operated with greatly reduced staff. The tanneries at OWEN SOUND were normally active; harness shops were quiet. At BRANDON and CALGARY tanneries, and trunk, bag and harness plants were slack.

Cut stone and granite workers at ST. JOHN had a quiet month. The glass factories at MONTREAL were becoming less active. At QUEBEC the cut stone industry was very dull and the brick-yards ceased work. These industries

Clay, glass, stone, cement, etc.

were also very quiet at SHERBROOKE. The glass factories at TORONTO were in steady operation. At HAMILTON the glass factories were only fairly active; the stone plants and potteries were slack, and the brick kilns closed down. At BROCKVILLE slackness was reported throughout the group. The glass and moulding factory at KINGSTON ran with reduced staff, shutting down toward the end of the month. The pottery at BELLEVILLE was fairly active. KITCHENER reported slackness among stonecutters and in brick, tile and sewer pipe yards, but the cement works were closed. The glass works at LONDON had a dull month; the brickyards closed for the season; stonecutters were busy. At CHATHAM the glass factory operated steadily. The brick and tile plants at VICTORIA were dull, but cement workers were well employed.

SYDNEY reported continued activity in the various oil and chemical industries. The paint and varnish industry at MONTREAL was rather quiet, but the chemical, drug and medicine plant were fairly active. At QUEBEC the cart-ridge factory re-opened, about half the former number of workers being employed. Quiet conditions were noted at SHERBROOKE in the lubricating oil and grease plants and in the acid, extract, drug and medicine factories. The paint mills at THREE RIVERS were fairly active. At TORONTO the paint, varnish and chemical industries had a fair month. At HAMILTON chemical workers were active and drug plants were fairly busy; the extract, soap and toilet industries were slack, some factories shutting down. At NIAGARA FALLS electro-chemical plants were busy, with one or two exceptions. Paint and varnish workers at BRANTFORD were well employed. The oil and grease plant at KITCHENER had a fair month. At WINDSOR the paint industry was rather quiet; the salt works ran to capacity; pharmaceutical plants were busy, extra help being employed for the Christmas trade. The paint industry at OWEN

SOUND was normally active. The chemical plant at SAULT STE. MARIE was practically closed. At WINNIPEG the soap factories were normally active throughout the month, without change in the number employed. VANCOUVER reported the Ioco oil refinery busy, but the paint and shop works were slack. The paint, soap, chemical and explosive factories at VICTORIA were fairly active.

The gross earnings of the Canadian Pacific Railway in November were \$23,799,146, as compared with \$17,366,849 in November of 1919. The gross earnings of the Canadian National Railways in December were \$12,434,075, as compared with \$8,747,530 in the corresponding period a year ago. During December the number of persons employed by the Canadian Pacific, Grand Trunk and Canadian National Railways in railway operation, including general offices, trainmen and engine crews, station employees, and sleeping, dining and parlor-car employees, showed a reduction of about 2,500 persons, the total employees at the end of the month being 69,000, in comparison with 71,500 at the end of November. This decrease was all accounted for by reductions in the Canadian Pacific Railway staffs. There was, however, a small reduction of about 200 persons reported by the Grand Trunk Railway which was compensated for by an increase in the Canadian National Railway staffs.

During December steam railways and navigation at SYDNEY were less active, but transfers, liveries and garage workers continued well employed. At TRURO trainmen worked about half time, and a number of men worked at lower grades of employment to avoid waiting their turn at their own trade. CHARLOTTE-TOWN reported that December was the busiest month of the year on the railway, and the car ferry was also exceptionally active. At St. JOHN steam railways were busy in connection with ocean traffic; navigation was active since the opening of the winter port, although 'longshore work was less active than in

former years; street railways were active and transfers, liveries and garages had a good month. At MONCTON the street railway system was not operated, in accordance with the policy of the company to conserve natural gas; railway passenger and freight traffic was somewhat lighter than a year ago, but express workers were very busy. At FREDERICTON employment was reported active among railway and other transport workers. At QUEBEC the railways were very busy, but navigation closed for the season; transfers and garages were very dull. Fair activity was reported at SHERBROOKE in all branches of transportation. THREE RIVERS reported activity on both steam and electric railways and in transfers. At St. JOHN'S and IBERVILLE it was reported that 400 more barges passed through the canal in 1920 than in the previous year, the cargoes being made up of pulp-wood, hay and coal. Railway men were busy at SOREL, but waterside work was at a standstill. At TORONTO steam railways were active, with a large amount of freight and heavy passenger traffic during the holidays, necessitating extra trains; street railway employees had steady work. HAMILTON reported the Toronto, Hamilton and Buffalo railway busy, but the Grand Trunk Railway was only fairly active; 'longshoremen were idle, steamship lines not running. Railway lines at NIAGARA FALLS were busy. At St. CATHARINES the railway system continued active in all branches. BROCKVILLE reported record passenger traffic for the holidays; transfers were active, but garages quiet. Passenger and freight traffic at BELLEVILLE, GALT and BRANTFORD was brisk, and transfers and garages were also active. KITCHENER reported a busy month in the street railways; railway freight was somewhat lighter, but passenger traffic was heavier; liveries and garages were rather quiet. At LONDON both the Grand Trunk and Canadian Pacific Railways laid off help in their freight sheds and roundhouses, freight traffic being light, but passenger traffic was very heavy on both systems; street railwaymen were steadily employed. St. THOMAS reported a falling-

off in traffic on the Michigan Central, but Wabash and Grand Trunk employees were busy; the Pere Marquette was normally active; track workers were laid off but train crews were retained in all cases, though regular employees on the Michigan Central were not making full time. Liveries and garages at WINDSOR were reported very quiet. At OWEN SOUND freight was normal, and passenger traffic heavy. At PORT ARTHUR and FORT WILLIAM the closing of navigation effected the usual changes in employment, freight handlers, elevator and coal dock workers going to the bush, or engaging in general labour. At WINNIPEG transportation workers had a fairly busy month, with practically the same numbers engaged. At BRANDON railwaymen had a busy month, but street railways were quiet. Staffs were reduced to winter strength on the C.P.R. at REGINA. The local freight sheds at CALGARY continued very quiet, as were also transfers and garages. In NELSON and TRAIL district traffic showed a marked decline, short time being frequent, though staffs were not reduced. At VANCOUVER steam and electric railways were fairly busy, and navigation and 'longshore workers and transfer and garage men were fairly well employed. At PRINCE RUPERT railway workers and 'longshoremen had a quiet month. VICTORIA reported all branches of transportation brisk in connection with the Christmas season.

Stone quarrying in QUEBEC district continued inactive. At SHERBROOKE the chrome iron and copper mines were quiet, but the asbestos industry was fairly active; the granite and gravel pits were quiet. At THETFORD MINES the asbestos industry was rapidly recovering its normal activity after recent interruptions. The mines at TIMMINS were still affected somewhat by lack of power. The silver mines at COBALT shipped during the month fourteen cars containing approximately 976,242 pounds of ore, as compared with

Mining (other than coal) smelting and quarrying

sixteen cars containing approximately 1,266,934 pounds in the previous month; bullion shipments amounted to 619 bars containing 751,886.58 fine ounces; this compares with 340 bars containing 411,040.66 fine ounces in November; work at the low grade mines was quiet. FERNIE reported that metalliferous mining in East Kootenay district was somewhat depressed, owing, it was said, to low market prices; the Sullivan mine at KIMBERLEY, the largest in the district, laid off one shift about the middle of the month, throwing about 200 men out of work; other mines in the Windermere Valley, though still operating, were said to be similarly affected. At NELSON and TRAIL a reduction of working forces in the mines and smelters was attributed to low prices of metals and high operating costs, but with the exception of copper the production of the mines was well maintained; of about 220 men laid off carpenters, machinists and helpers were the most numerous classes; most of the married men, however, were transferred to other departments. Le Roi No. 2 mine at ROSSLAND closed down in the first week of December, throwing about 60 men out of work; most of these men were later employed on Provincial road work; the electrolytic zinc plant continued in steady operation; the electrolytic lead plant turned out about 2,000 tons of refined lead during the month; the copper and silver refinery, concentrator and acid plant continued active. The Blue Bell mine at AINSWORTH closed down early in the month, releasing 50 men, and 40 men were laid off at the Yankee Girl mine at YMIR. The copper mill at Britannia Beach shut down and shipments ceased, owing to the condition of the market. The mining camps at STEWART, ALICE ARM and ANYOX were quiet, only winter crews being employed.

The Dominion collieries at SYDNEY produced 285,000 tons of coal in December, compared with 295,000 tons in the previous month; 7,250 tons of coke was produced, 50 coke ovens

being in operation. The Nova Scotia collieries at SYDNEY MINES raised 58,000 tons of coal, compared with 55,304 tons in November, but no coke was produced. The coal mines at MINTO had a fairly active month. The Prairie coal mines worked during the month with few interruptions, some demand for skilled miners being noted at DRUMHELLER. At LETHBRIDGE both large mines had a full month; the Coalhurst and other mines in the district were also active. CALGARY and EDMONTON reported fair activity in the coal mines in Alberta. FERNIE reported satisfactory employment conditions in the mining industry in Crow's Nest Pass though the mild winter limited the demand for domestic coal. NANAIMO reported uncertain conditions in the coal mining industry on Vancouver Island, a number of men being laid off during the month and several shifts lost through lack of shipping facilities; one operating company obtained a monthly contract for 25,000 tons of coal from the Canadian Pacific Railway Company, who changed their steamers from oil to coal burners.

The value of the building permits in 56 cities during November amounted to \$5,289,321 as compared with \$9,660,538 in October. During December the continued open weather at SYDNEY allowed building operations to proceed, much work being completed. At TRURO carpenters and painters were rather quiet, but at CHARLOTTETOWN these trades were busy on inside work. ST. JOHN reported some industrial buildings in progress, besides building and bridge construction for the C.P.R., and other construction work; the city started sewer pipe laying to provide work for the unemployed. At MONCTON and BATHURST some outside work still continued, but activity was chiefly confined to indoor work. MONTREAL reported fair conditions in the building trades, with good prospects for the coming year. At QUEBEC many men were thrown out of work on the completion of buildings, but some new

foundation work was in progress. Building was very slack at SHERBROOKE and ST. HYACINTHE, but at THREE RIVERS considerable work was still in progress. Some unemployment was reported at OTTAWA and HULL, although fine weather allowed building to continue during most of the month. At TORONTO building was quiet so far as new undertakings were concerned, with a large percentage of men out of work; but considerable inside work was being carried on; the Harbour Commissioners decided to spend upwards of four million dollars in 1921 on the completion of the Sunnyside-Humber development and the further extension of the industrial area in Ashbridge Marsh and the central harbour. The building trades at HAMILTON were all reported slack, owing to weather conditions; the city corporation opened up road and sewer work for the unemployed, giving three days' work in the week to all applicants. At NIAGARA FALLS the building trades were reported well employed; about 3,500 men were engaged on the Hydro-power canal and connected works. Canal construction at ST. CATHARINES continued, two shifts being worked on sections 1, 2 and 3. At BROCKVILLE and KINGSTON some work continued on buildings nearing completion. PETERBOROUGH reported some work in progress on public buildings; work on the new bridge was about to discontinue for the season but some of the unemployed were expected to obtain work on a new city filtration plant. At GALT a fair amount of building was under way. The unemployed at BRANTFORD had some work on a new railway subway, and the city council further opened relief work on the dyke. A number of bricklayers and other building tradesmen at KITCHENER were out of work, though some buildings were being completed; the city provided relief by grading a few new streets. Bricklayers and masons at GUELPH were very quiet, but carpenters and plumbers were fairly active. At STRATFORD and WOODSTOCK work still was in progress. LONDON reported the fine weather still allowed bricklayers, carpenters, plaster-

ers and other building tradesmen to work, but unemployment was very prevalent; the city council started special relief work on sewers, etc., and the Public Utilities Commission was laying mains to supply the C.P.R. with river instead of city water. The building trades were quiet at CHATHAM. At WINDSOR an unusually busy season was brought to a close. At WINNIPEG very little building work was in progress and a large number of mechanics were out of employment. The building trades at REGINA had a very quiet month. Building at LETHBRIDGE was at a standstill. At CALGARY construction work was very quiet, and at EDMONTON the season was drawing to a close. VANCOUVER and NEW WESTMINSTER reported the building trades very slack in every line. At PRINCE RUPERT some provincial road work was in progress. VICTORIA reported the filling and dredging for the ocean docks about completed and the Provincial Government wharf also ready; some public buildings were under way.

Railway construction employment showed further contraction during the month of December, the number of persons employed by the Canadian Pacific, Grand Trunk and Canadian National Railways, including maintenance of way, being 29,700 at the end of the month, in comparison with 36,200 at the end of November, or a total decrease of 6,500. This reduction was made up by a decrease of 3,600 persons in the Canadian National Railway staffs, 2,200 persons on the Canadian Pacific Railway staffs and 700 on the Grand Trunk. The declines were spread more or less evenly over the whole of the month.

At CHARLOTTETOWN employment in the woods increased owing to the snowfall. ST. JOHN reported **Lumbering** the saw and shingle mills quiet. At FREDERICTON a considerable number of men were employed in the woods, but a short logging season was anticipated. BATHURST reported increased activity following a heavy snowfall. SHER-

BROOKE reported fair activity in the lumber, tie and pole camps in the Province of Quebec. The sawmills at SOREL were active. OTTAWA and HULL reported considerable activity in the woods in Ontario and Quebec, but most of the sawmills were closed down. PETERBOROUGH reported activity in the woods below normal, few camps hiring the usual number of men; this condition was attributed to uncertain market conditions. Camps in OWEN SOUND district were fairly busy, and sawmills were active. SAULT STE. MARIE reported lumbering operations as somewhat hampered by deep snow which fell towards the close of the month; additional men were taken on, experienced bushmen being in some demand. At PORT ARTHUR and FORT WILLIAM a strong demand was noted for experienced bushmen, tie-makers, pulpwood cutters and monthly men; most of the work this year was said to be carried on under piece-work conditions. WINNIPEG and REGINA reported bush work rather quiet in northern Manitoba and Saskatchewan, but there was some demand for experienced bushmen. EDMONTON reported bushwork rather quiet in northern ALBERTA, the cut this year

being estimated at only about half the normal amount. At FERNIE conditions in the lumbering industry were said to show some improvement over the previous month, due to large orders for railway ties and to woodmen accepting a marked reduction in wages; it was expected that many sawmills would reopen early in the new year; during December, however, the only mill in the district working to any extent was at YAHK, where between 700 and 800 men were employed at the camp and mills; at WATTSBURG between 100 and 200 men were employed in the camps; many sawmills continued to shut down, the largest companies in Fernie district being likely to remain closed all winter. NELSON reported a complete cessation of work at the sawmills early in the month; a small demand was noted later for the woods. At NEW WESTMINSTER the lumber mills were still quiet, one mill being shut down and the others not working to full capacity. VANCOUVER reported continued depression in the lumbering industry. Similar conditions were noted at PRINCE RUPERT, the only activity being in the camps. VICTORIA and NANAIMO reported very dull conditions in lumbering on Vancouver Island, practically all mills ceasing operations.

INDUSTRIAL DISPUTES INVESTIGATION ACT, 1907

PROCEEDINGS FOR THE MONTH OF DECEMBER 1920, WITH TEXT OF BOARDS' REPORTS

DURING the month of December the Department received reports from two Boards established to deal with disputes between (1) the Corporation of the City of Fort William and certain of its employees, being fire fighters, members of Local Union No. 193, International Association of Fire Fighters, and (2) the Canadian National Transfer Company and certain of its employees, being teamsters and chauffeurs, members of the Canadian Brotherhood of Railway Employees. Four applications

were received during the month for the establishment of Boards, and an application which had been received during the previous month was withdrawn.

Applications Received

During the month of December applications for the establishment of Boards were received as follows:

(1) From the employees of various mining companies operating in the Edmonton District, being members of

Local Union No. 4070, United Mine Workers of America. In this case the employees concerned were on strike but resumed work on the understanding that a Board of Conciliation under the Industrial Disputes Investigation Act would be established. It was explained to the disputants that it would be necessary for the companies as well as the employees concerned to nominate one member each to represent them respectively on the Board. A Board was established composed as follows: Mr. C. D. Fisher, Saskatoon, chairman, appointed by the Minister in the absence of a joint recommendation from the other two members, Mr. Mayne Reid, Edmonton, appointed by the Minister in the absence of a recommendation from the employing companies, and Mr. R. Livett, nominee of the employees.

(2) From the employees (all classes) of the Canadian National Railways, all lines in Canada. A Board was established composed as follows: Mr. J. M. Godfrey, chairman, appointed by the Minister in the absence of a joint recommendation from the other two members, Mr. F. H. McGuigan, Toronto, appointed by the Minister in the absence of a recommendation from the Company, and Mr. David Campbell, Winnipeg, nominee of the employees.

(3) From the employees of the Cornwall Street Railway Company, members

of Division No. 946, Amalgamated Association of Street and Electric Railway Employees of America. After the application had been received a special officer of the Department visited the locality and at the close of the month negotiations were in progress looking towards an adjustment of the dispute without Board reference.

(4) From the employees of the Canadian National Railways, Western Lines, being draughtsmen and fieldmen, under the Engineers' Department, members of the Canadian Brotherhood of Railway Employees. At the close of the month this application was under consideration.

Other Proceedings under the Act

During the month of December the application which was received from the Humberstone Coal Company, Edmonton, Alta., for a Board to deal with a dispute with its miners, was withdrawn. A special officer of the Department had visited the locality with a view towards securing an adjustment of the dispute, if possible, without Board reference. An adjustment was not effected, but the miners concerned joined with the employees of various other mining companies operating in the Edmonton District in an application for a Board, mentioned in the present article.

Report of Board in Dispute between the Corporation of the City of Fort William and its fire fighters

A REPORT was received from the Board established to deal with the dispute between the City of Fort William and certain of its employees, being fire fighters, members of Local Union No. 193, International Association of Fire Fighters. The employer in this case being a municipality a Board could be established only upon the joint consent of the disputants. The City granted its consent and a Board was established

composed as follows: Mr. N. M. Patterson, Fort William, chairman, appointed on the joint recommendation of the other two members, Messrs. W. A. Dowler, K.C., and J. R. Pattison, Fort William, nominees of the City and employees respectively. The report was signed by the chairman and Mr. Dowler and contained recommendations concerning certain increases in wages. Mr. Pattison presented a minority report.

Report of Board

In the matter of the Industrial Disputes Investigation Act, 1907, and of a dispute between the Corporation of the City of Fort William, employer, and certain of its employees, being members of Local No. 193, International Association of Fire Fighters, employees.

As there has been no evidence submitted to show the cost of living is higher in the City of Fort William than elsewhere and no evidence has been produced to show the duties of a fireman are more exacting or arduous in the City of Fort William than elsewhere, this Board feel that a comparison with cities as near as possible of a like size is fair to both sides and have therefore sent out a questionnaire to the following sixteen cities:—

Kitchener, Stratford, St. Catharines, Sault Ste. Marie, Peterboro, Kingston, Guelph, St. Thomas, Windsor, Port Arthur, Saskatoon, Lethbridge, St. Boniface, Moose Jaw, Medicine Hat, Regina.

Ten cities east of here and six cities west of here (as only six were favourable of comparison in the west) the averages were taken with the following comparison:—

Average population...	21,176	Fort William.....	19,523
" area, acres...	5,761	"	9,865
" Chief.....\$	179.00	"	\$ 175.00
" Asst. Chief...	138.11	"	136.50
" Captain.....	129.46	"	120.40
" 1st year men.	102.13	"	98.00
" 2nd year men	109.93	"	103.50
" 3rd year men.	115.19	"	109.00

The Board feel that they have acted fairly in using these cities for comparative purposes and as the result shows the City of Fort William in granting a raise to firemen on April 1st, of 15 per cent to first year men and 10 per cent to others, have raised the wages above the average, as follows:—

Average Chief.....\$	179.00	Fort William.....\$	188.12
" Asst. Chief....	138.11	"	150.14
" Captain.....	129.46	"	132.00
" 1st year men.	102.13	"	112.70
" 2nd year men	109.93	"	113.85
" 3rd year men.	115.19	"	119.90

We, therefore, cannot conscientiously recommend any further advance. We do, however, recommend the City to adjust more fairly, at an early date, the difference between new men and experienced men, and, in order to encourage men to stay on, would recommend the grading of wages over a longer period than three years.

(Sgd.) N. M. PATERSON,
Chairman.

(Sgd.) W. A. DOWLER.
Fort William, Ont.

December 8th, 1920.

Minority Report

In the matter of the Industrial Disputes Investigation Act, 1907, and of a dispute between the Corporation of the City of Fort William, employer, and certain of its employees, being fire fighters, members of Local No. 193, International Association of Fire Fighters, employees.

To the Honourable Gideon Robertson,
Minister of Labour,
Ottawa, Ontario.

Sir,—

I regret very much that the majority of the Board did not arrive at a decision regarding an increase in wages with which I could agree, thus making it necessary for me to submit a Minority Report.

In dealing with a report of this nature, it is necessary to go back to the beginning of the dispute, as it was the conditions that existed at that time that were responsible for the demands made for a 20 per cent increase all round. On March 23rd, 1920, a special committee was appointed by His Worship Mayor A. H. Dennis to consider an increase in civic salaries of those directly under the jurisdiction of the City Council and it was on a report of said committee that increases were granted on a percentage basis as follows:

Up to \$50.00 per month, 20 per cent.

From \$51.00 to \$100.00 per month, 15 per cent.

From \$101.00 to \$150.00 per month, 10 per cent.

From \$151.00 to \$200.00 per month, 7½ per cent.

From \$201.00 upwards per month, 5 per cent.

to become effective April 1st, 1920, and as a consequence the Fire Fighters received a 10 per cent increase for second and third year men and a 15 per cent increase for first year men, as those whose wages did not amount to \$100.00. These wages were received under protest by the Local Union of Fire Fighters who immediately took the matter up with City Council. The matter was also referred to the various trade unions also the trades and labour council, and after the question had been carefully considered, the advance asked for was endorsed by these bodies and copies of resolution endorsing these demands were forwarded to the City Council, but the Council did not see fit to change the previous decision arrived at, viz: the acceptance of the Committee's Report on wage increase.

As a consequence the matter in dispute was further carried on between the Fire Fighters' Local and the City Council until finally in the month of August a Board of Conciliation was applied for and appointed to deal with the question. The Board consisted of the following:

1. N. M. Paterson, Esq., Chairman.
2. W. A. Dowler, K.C., Representative for the City Council.
3. J. R. Pattison, Representative of the Fire Fighters.

The Board took the matter up, securing information from many cities, also wages paid in other branches of employment in the city of Fort William. Much evidence has been secured upon the matter in dispute. Statements were presented by various members of the Fire Fighters showing that it was with difficulty that they were able to maintain a decent home. Evidence submitted by some of these men with families showed that after their expenses had been met they had nothing left and it was on cases of this sort that I appealed

for the increase asked for by the men of the Fire Department. It hardly seemed just to expect the members of any department to suffer these conditions.

I venture to say that wages have not advanced in line with rubber hose, gasoline, horse feed and equipment. These things have to be paid for and are paid for without any protest but when it comes to wages for firemen they have to submit to giving evidence to show their conditions of living, and I believe in the majority of cases submitted the men were not being paid in accordance with the high cost of living, and it is mainly upon this evidence as well as the fact wages paid to other men in the city that I agree with the demands made by the men and would ask that before any decision is arrived at that these matters be carefully considered by the Labour Department.

I will submit some comparisons in this city of various wages paid and these figures are correct having been supplied to the Board during their hearings.

Fire Fighters receive at present, this includes the 10 per cent advance granted in April:—

1st year men, \$112.70 per month.
 2nd year men, \$113.80 per month.
 3rd year men, \$119.90 per month.
 Engineer, \$132.00 per month.
 Lieutenants, \$125.40 per month.
 Captains, \$132.00 per month.
 Assistant Chief, \$150.15 per month.

The hours worked by the members of the Fire Department are 360 per 30 day month or a weekly average of 94 hours. The wages paid under the city schedule, operative since April 1st, 1920, when taken on an hourly basis are as follows:

1st year men, 31 1-3 cents.
 2nd year men, 31 11-36 cents.
 3rd year men, 33 ¾ cents.
 Lieutenant, 34 5-16 cents.
 Captain, 36 2-3 cents.

The Street Railway employees, conductors and motormen are paid as follows:

First 6 months, 50c. per hour.
 Next 18 months, 53c. per hour.
 After 2 years, 55c. per hour.

and make on an average of

55c. per hour, \$150.00 per month.

53c. per hour, \$140.00 per month.

50c. per hour, \$115.00 per month.

Police Department:

3 months, \$115.00 per month.

9 months, \$125.00 per month.

2 years, \$132.20 per month.

3 years, \$139.15 per month.

Grain Inspectors:

1st year, \$1,380.00

2nd year, \$1,500.00

3rd year, \$1,620.00

4th year, \$1,740.00

5th year, \$1,860.00

6th year, \$1,980.00

7th year, \$2,100.00

School Teachers:

	Minimum.	Maximum.
Lady Assistants.....	\$ 900.00	\$ 1,400.00
Vice-Principal (Male)....	1,400.00	2,000.00
Principals.....	2,000.00	2,500.00
Manual Training Instruct.	1,800.00	2,300.00
Kindergarten (Assistants).	600.00	700.00
Domestic Science.....	1,100.00	1,600.00

Wages paid to other workers in the District:

Bricklayers, \$1.25 per hour.

Carpenters, \$1.00 per hour.

Machinists and all shop trades on railroads, 85c. per hour.

Engineers on railroads are paid on a mileage basis and their wages run high during steady work, and the same can be said of the conductors, trainmen and all other railroad employees, including locomotive firemen and switching crews.

It will be seen from the foregoing comparison that the firefighter is at a distinct disadvantage in regard to wages, when taken alongside any other class of labour. The minimum wage for unskilled labour in this city being far ahead of the wage paid to skilled officers and men of the Fire Department on whose skill and sense of duty the lives and property of all our citizens depend. Then to take into consideration the cost of living based on tables given by the Dominion Government for the months of June, 1920, and for July, 1920, (*Labour Gazette*). The cost of living per month was \$120.88. Later figures have not decreased this amount and in one month even increased it. In comparing

the wages paid other fire fighters in the principal cities of Canada we find that some are paid more than Fort William and some are paid less, but to try and compare anything on these lines would involve us into a long argument as various conditions would have to be considered. For example, the area of said cities, number of men employed and under what system they are now working, whether two platoon, three shift or twenty-four hour straight shift, the latter might be termed a continuation shift.

In this city we have a large percentage of buildings that are not of fire proof construction and we have many large elevators and ware-houses which make it imperative that we must maintain a good fire fighting force. We have a large area to cover and all this must be taken into consideration in comparing the city to any other that might be considered.

In supporting the advance asked for, I realize that we must add some recommendations to recompense the city for the increase paid, and I would submit, for your consideration, the following suggestions which ought, under any consideration, to be included in a report of this Board.

The conditions under which the Fire Department is working has not been a question in dispute, but we must submit that our Department has a large area to guard. We have many large elevators, situated in many cases close to the city, and as a consequence we must maintain an efficient Fire Department, not only in equipment, but in men, and it is by paying these men good wages that efficiency will be secured and maintained. We will also have to submit that nine-tenths of our buildings are not of fire-proof construction, as submitted by the Fire Chief, and Building Inspector.

Therefore, in accordance with the foregoing, I would suggest that we recommend that a system of patrolling and inspecting of business blocks, elevators, and apartment buildings, be instituted, thus getting the members of our Department acquainted with those, also with

any interior fire fighting apparatus that may be in the buildings above mentioned. This of course would apply to chemical extinguishers and hose racks, that do exist in many of the buildings. I am of the opinion that every member of the Department should be thoroughly acquainted as to the whereabouts of fire fighting apparatus in all theatres, dance halls, picture houses, etc.

Secondly:—I would suggest that a portion of the spare time at present at the disposal of the fire fighters be devoted to the above, also that a course of training in fire prevention be given to all members of the Department, also that every member of the Department be given the opportunity at various times to acquaint himself with the conditions existing in various business blocks, stores, public buildings, also the basements used for storage in any such places, by being sent on frequent trips of inspection through these places, reporting conditions existing to the chief on each occasion.

Thirdly:—I would suggest that the maintenance of the Electric Alarm System, at present being carried out by the Public Utilities Department, be in future taken over by the members of the Fire Department, thus disposing of a considerable amount of the spare time now at the disposal of the men whilst on duty in the various stations throughout the city. The above suggestion would also apply to any temporary or minor repairs to the equipment of the Department.

I believe that with the suggestions as I have stated the increase asked for, if granted, would be more than repaid, and that the city would be recompensed by the additional efficiency added to the Department, by the adopting of the above recommendations.

Yours truly,

(Sgd.) J. R. PATTISON,
Representing Employees.

Dec. 13, 1920.

Report of Board in Dispute between the Canadian National Transfer Company and its teamsters and chauffeurs

A REPORT was received from the Board established to deal with the dispute between the Canadian National Transfer Company and certain of its employees, being teamsters and chauffeurs, members of the Canadian Brotherhood of Railway Employees. The Board was composed as follows: Mr Philip C. Locke, Winnipeg, chairman, appointed by the Minister in the absence of a joint recommendation from the other two Board members, Messrs. R. G. Persse, and David Campbell, Winnipeg, nominees of the company and employees respectively. The report was signed by the chairman and Mr. Persse and contained recommendations as to settlement of the dispute. Mr. Campbell presented a minority report.

Report of Board

In the matter of the Industrial Disputes Investigation Act, 1907, and of a dispute between the Canadian National Transfer Company, employer, and certain of its employees, being teamsters and chauffeurs, members of the Canadian Brotherhood of Railway Employees, employees.

To the Honourable
Gideon Decker Robertson,
Minister of Labour,
Ottawa, Ont.

Sir,

On the first day of October, A.D. 1920, an application was made by the

teamsters and chauffeurs in the employ of the Canadian National Transfer Company for a Board of Conciliation under the Industrial Disputes Act, Chapter 20, Statutes of Canada, 6-7 Edward VII and amendments. This application followed a notice which had been given in August, 1920, by the men to the company of their wish to revise the schedule of wages and working conditions entered into and effective from the first of March, 1920. A Board was formed consisting of Mr. R. G. Persse, nominated by the company, Mr. David Campbell, nominated by the men and Mr. Philip C. Locke appointed by the Minister of Labour in default of the other two members agreeing on a chairman. Ten meetings of the Board were held for the hearing of evidence and one meeting of the Board was held in camera to consider their report.

The Canadian Brotherhood of Railway Employees were represented by Mr. H. F. Lawrence, the General Chairman of the Brotherhood, Mr. George Fyffe, Local Chairman and Messrs. R. Wilson, W. Mitchell and F. Beavis, and the Canadian National Transfer Company was represented by Mr. E. W. Warner, General Agent of the Canadian National Railway and by Mr. Frank Heron, the Superintendent of the company.

The proposed schedule differed from the old one mainly in two points, first, in working hours and, second, in wages. The general working conditions remained practically unchanged. Under the schedule of March First, 1920, the men were afield from 7.25 a.m. until 5 p.m., five days of the week and on Saturday from 7.25 a.m. until 1 p.m. On week days the men might work from 5 p.m. until 5.30 p.m. without receiving any overtime, but on Saturday overtime commenced at one o'clock. If, however, a man worked until 5.31 o'clock he received three-quarters of an hour's pay. Teamsters are paid at the rate of three and 78-100 dollars per day for a seven day week or twenty six and 46-100 dollars per week with time and

half for overtime. Besides this the men harness their horses and get out their lorries and unharness and put away their lorries on their own time, that is to say, those duties are performed before and after their time actually counts. Motor truck drivers of two ton trucks are paid twenty-eight and 85-100 dollars per week and drivers of less than two ton trucks twenty-six and 45-100 dollars per week.

Under the schedule proposed by the men, forty-four hours a week, being eight hours per day for five days and four hours on Saturday, should constitute a week's work and teamsters should be paid one hundred and forty dollars per month and chauffeurs one hundred and fifty-five dollars per month. The proposed schedule also called for one week's holiday with pay after one year's continuous service and two weeks' holiday with pay after two years' continuous service.

The company took the attitude that they were paying as high wages and were giving as reasonable working hours as any other transfer or railway transportation company in the city. To substantiate that they called the Managing Directors of two of the draying companies in the city of Winnipeg, and also the Assistant Manager of the Manitoba Cartage Company, a company which occupies with the Canadian Pacific Railway, a similar position to that which the Canadian National Transfer Company does with the Canadian National Railway.

From the evidence submitted to us it would appear that so far as companies doing general draying business are concerned that they are not paying quite as high wages in some instances as do the Canadian National Transfer Company. The Manitoba Cartage Company's rates and working hours are practically the same as the Canadian National Transfer Company except that the Manitoba Cartage Company pay straight time for overtime. For this reason the company urged very strenuously that they should not be placed by this Board in a position where they could not compete by reason

of an additional burden being placed on them in the way of increased wages. It was argued before us that if an injustice had been done to the teamsters of the Canadian National Transfer Company in the way of unfair wages, that a similar injustice had been done to all teamsters throughout the city, and that so far as the evidence before us went the only teamsters to complain were the railway transfer men. In this connection I might point out that the employees of the Manitoba Cartage Company, doing similar work to the men in this dispute, made an application to the Council of Industry, a Provincial organization instituted at the last session of the Legislature of the Province of Manitoba for a settlement of their dispute. We have been advised by the Chairman of that Board, Reverend C. W. Gordon, that evidence has been taken there, but the matter has stood pending the result of the decision of this Board.

A further claim was made by the company that it was financially impossible for them to carry on business if wages were increased. They pointed out that in March of 1920 a fifteen dollar raise was given to the employees of the Manitoba Cartage Company and the Canadian National Transfer Company and that it was only done after consultation with the Shippers' Section of the Board of Trade who arranged for a twenty-four per cent increase in cartage rates which the companies claimed they had to have in order to give the men a fifteen per cent increase.

The company further claimed that by reason of the increase in cartage rates in March, 1920, a large number of large wholesale firms and jobbers throughout the city were now doing their own cartage instead of having the work performed by the local railway cartage companies, and a list of fifty-four firms which up to the twenty-ninth of November, 1920, had ceased to do business with the Canadian National Transfer Company was filed and is appended to this report. Both the Manitoba Cartage Company and the Canadian National Transfer Company

claimed that even at the present prices with business in its present condition that they were unable to make any money, and the Canadian National Transfer Company claimed last year to have had a deficit of very nearly twenty-seven thousand dollars.

P. G. Denison, the Secretary of the Shippers' Section of the Board of Trade, gave evidence before us that the Shippers' Section of the Board of Trade which takes in the wholesalers and jobbers would not consider a further increase in transfer rates and stated that if the rates were raised the result would be that more firms would do their own transfer business or have it done by some of the outside cartage companies in the city of Winnipeg thus resulting in a greater loss to the railway transfer companies.

I believe that the reason for this falling off of business is not due entirely to the rates but rather to the very unusual condition in which general business is in in Western Canada at the present time. We have passed through an era of appallingly high prices. Merchants throughout Western Canada have had to pay for the ordinary commodities of life prices far in excess of anything ever known in this country. To combat that condition the purchasing public have, to use an expression of one of the witnesses before us, gone on strike against high prices. For many months economists and business men have predicted sweeping reductions in prices. The result has been that the buyer, the retailer, the jobber and the wholesaler have held back from purchasing large quantities of goods except where absolutely necessary. Purchases have been more or less in the nature of hand to mouth. The country merchant expecting that his goods could be purchased far cheaper in the very near future has refrained from stocking up on the high prices, realizing that if he did so he would have to compete with lower priced goods later on. The result has been that the wholesalers in Winnipeg generally have had the poorest fall that they have had for many years. One witness called who has been in the local transfer

business for some thirty years said he had never seen a season like it. Evidence was presented before us that some few months ago some three of four of the wholesalers in Winnipeg offered to sell the retail merchant his goods f.o.b. cars, absorbing the cost of cartage themselves. No doubt this was an attempt on the part of the wholesalers to move their goods which had apparently been moving very slowly. A number of the wholesalers have followed suit and in a great many cases they have gone to outside cartage companies instead of dealing with the local railway transfer companies, claiming that they could get better rates.

Personally I was very much struck with the argument advanced by the company that they were paying as high wages or in some cases a little better wages than the ordinary transfer company. It was argued before us that comparisons such as this were dangerous as they might start from a wrong base and that merely because other men in the same line of employment were willing to work for these wages was not proof that these wages were fair. It would appear to me impossible to get any idea of what the men should get without some such comparison and it does seem to me that a comparison of wages should be made. There are other factors which enter the question of what constitutes a fair wage but it would seem to me that the prevailing wage that is being paid in the same line should be very seriously considered.

A claim that has been persistently advanced for some years in regard to increased wages was advanced before us, and that was the increased cost of living. In the first place let me say that any business which can only succeed by paying starvation wages to its employees is one which in my opinion should go out of business, and the sooner the better. I am not impressed by any argument of inability to pay wages. If the wages which are being paid at the present time are not sufficient to support a man in the walk of life in which he belongs in the decency which every Canadian

citizen has a right to demand from the country, the company should cease to do business. The company made a claim that the wages should not be increased, as the cost of living which was the primary reason for raising the wages before was now coming down. In support of that a large amount of evidence was submitted to us from various sources. It would appear from the evidence filed that although there was only a small decrease in the cost of living as shown by the *Labour Gazette* for the month of October, that in November prices took a drop. In September, 1920, according to the *Labour Gazette*, the cost per week of food for a family of five was \$15.24, in October, \$15.08. The Board made enquiries from a large departmental store and also from one of the largest retail butchers in Winnipeg, and found that these commodities being purchased on to-day's market would cost \$11.59, a drop of almost twenty-five per cent. The Winnipeg papers are full of reduced prices in seasonable clothing of all kinds, the cut being anywhere from fifteen to twenty-five and even up to fifty per cent. Trade journals show that the general trend of prices is down. It would appear to me that men drawing \$115.00 per month in January of 1921 will be very much better off than the men drawing that same wage during the first nine months of 1920.

We had some interesting information presented to us as to the cost of living of a man in the walk of life that a teamster is in. One of them gave us a detailed statement showing cost of his groceries, bread, milk, meat, fuel, light and water to be \$90.76 a month, and claimed that for the month of October his cost of living exclusive of clothing or insurance was one hundred and thirty-five dollars and some cents. This man is an ex-soldier, having served some two or three years in France, and he is now receiving a pension due to his having lost an eye in war service. His income is about \$175.00 per month. I can quite imagine he has somewhat increased his style of living on account of having more money than his fellow workmen. Some of the other men who were called before us had

nothing outside of their wages and they claimed to have a great deal of difficulty in making both ends meet. In one case a man, his wife and two children were living in a three roomed cottage in St. Boniface. It would appear to me, however, that the drop in prices will make a considerable difference in the cost of living. Taking the figures which the Board obtained for the month of November from local merchants and taking the figures for the month of October from the *Labour Gazette* which gives the cost of food for a family of five at \$69.01 per month, an average reduction of twenty-five per cent, which appears to be current, would mean a saving of \$17.25. This would make a very material difference in a man's income. As against this must be considered the increased price of coal which is up \$1.65 per ton

There is one other factor which presents itself very strongly to me and that is the question of unemployment. I have been told that that is a thing which I should not consider. That statement I think is absolutely wrong and it is a factor which I must consider. I cannot shut my eyes to the fact that there is this year a tremendous amount of unemployment, far more so than in other years. The purchasing public having gone on strike against high prices has resulted in factories running part time, others discharging a number of their employees, railway companies curtailing their operations and business organizations generally curtailing their business to meet the present situation. I am credibly informed that one of the large departmental stores in the city of Winnipeg has let out during the last three months eighteen hundred of their employees, and only this week the Canadian Pacific Railway have reduced their working staff in the shops quite considerably. A delegation recently went to Ottawa to point out the large amount of unemployment there is in the city of Toronto. A despatch from Vancouver received in Ottawa on the twenty-second of November showed that in the city of Vancouver there were ten thousand men out of work

and in the city of Victoria five thousand. Reports show that the members of the government who met the Toronto delegation pointed out to them that unemployment existed throughout the whole of Canada. The newspapers point out that there is a meeting of the Cabinet being held in Ottawa on the 27th and 28th of this month to consider the very grave question of unemployment throughout the Dominion of Canada.

The evidence submitted to the Board showed that about one-fourth of the staff of the Canadian National Transfer Company at the present time is unemployed and the same applies to the Manitoba Cartage Co. Whether more of the working force of the Canadian National Transfer Co., will have to be laid off during the next few months is problematical. It would appear to me to be the duty of the Board in making an award to consider not alone what constitutes a proper wage for a Canadian citizen but also whether the setting of that wage will necessarily mean that the men will receive that wage. The duty of this Board is to fix a fair living wage, but in doing so the Board must consider the present conditions of labour and in attempting to fix that wage must not lose sight of the fact that there must be work to do and that without it setting a wage would be an absolute farce.

I would find that the men's work and their pay should commence from time they arrive at the barn or at the garage until they leave there. I see no justification whatever for a man being asked to harness or unharness his horses on his own time. This, I understand, is an old custom and the sooner it is changed the better. There is no justification whatever for it.

In regard to working hours, Mr. Warner suggested a ten-hour day. I think that nine hours is sufficient in view of the fact that the men are working out of doors under all kinds of climatic conditions.

In regard to wages. If this application had come before me in July or August when prices were at the peak and without

foreknowledge of the conditions that now prevail, I would have been inclined to recommend an increase. With the falling price of foodstuffs and the necessities of life, and bearing in mind the unemployment situation, I do not feel that I would be justified in suggesting a higher wage than the one at present paid. If this depression in prices is only a temporary one it might be that the wages should be increased later on. Under the present conditions in Winnipeg and Western Canada I do not feel that an increase in wages would be warranted, but feel that an increase would be unwise and would operate to the detriment of the men rather than to their advantage.

I cannot close without stating that the meetings of the Board and the relations which apparently exist between the employer and the employees were the most friendly. There appears to be a genuine spirit of good feeling between Mr. Warner and Mr. Herron on the part of the company and the men. I would like to point out that of the four men who appeared before us two of them had served overseas with the Canadian Expeditionary Forces. I would also like to say that the presentation of the case by Mr. H. F. Lawrence representing the men and Mr. E. W. Warner representing the company was splendidly done. These gentlemen gave the Board every assistance in the presentation of the case.

(Sgd.) PHILIP C. LOCKE,
Chairman.

(Sgd.) R. G. PERSSE,
for the Employer.

Winnipeg, Manitoba,
December, 21st, 1920.

Minority Report

In the matter of the Industrial Disputes Investigation Act, 1907, and in the matter of the dispute between the Canadian National Transfer Co., employer, and its Teamsters and Chauffeurs, employees.

Hon. G. D. Robertson,
Minister of Labour,
Ottawa, Ont.

Sir,

The Board established by you under date of October 16th, 1920, to inquire into and report upon the above named dispute commenced its sessions on November 18th, but found it necessary to adjourn until November 29th, from which date the hearings and deliberations of the Board continued from day to day, up to and including December 3rd.

Mr. E. W. Warner, General Agent of the Canadian National Railway Company and F. Herron, Superintendent for the Canadian National Transfer Company were heard on behalf of the employer and Mr. H. F. Lawrence, General Chairman of the Canadian Brotherhood of Railway Employees of the Canadian National Railways Western Lines, Mr. G. Fyffe, Local Chairman, and Messrs. R. Wilson, W. Mitchell and F. Bevis were heard on behalf of the employees. There were also witnesses called by the employer representing the Manitoba Cartage Company, and other cartage companies in the City of Winnipeg and a number of wholesale and retail merchants. The employees called as a witness an employee of the Manitoba Cartage Company.

The dispute between the parties consists of some proposed amendments to the existing schedule agreement of working conditions, and an increase in wages of \$25.00 per month for teamsters, and a somewhat similar increase for chauffeurs, which would make their monthly rates \$140.00 and \$155.00 per month respectively. The chief points of dispute in the proposed amendments to the rules was a reduction of the hours of service from nine hours to eight hours per day; a request for one week's vacation without loss of time after one year's continuous service, and two weeks after two years' continuous service. It appears that the proposed amendments to the working conditions of a minor character had been discussed between the parties and agree-

ments on these had been reached, but no final agreement could be arrived at owing to the failure of the parties to agree upon the differences mentioned above.

The employer strenuously objected to any increase in the rates of pay and to the shortening of the hours, and also desired the existing rate of overtime to be reduced from time and a half to straight time. The grounds of these objections are briefly, that the shippers will not increase the existing tariff of cartage rates, and the Company is unable to increase wages upon the existing tariff. It was urged by the employer that if wages are increased the Company must either go out of business or obtain an increase in the cartage tariff.

On the other hand the employees contended equally as strenuously, that they were unable to live and support their families on the existing rates of pay; that they had received no increase of wages since the year 1918 except an increase which was made in March, 1920, effective from January 1st, amounting to 15 per cent on the then existing wages, and that the cost of living had materially increased from month to month since that time.

It appears that in March last, conferences were had between the cartage companies and the shippers constituting what is known as the transportation section of the Board of Trade, whereat a revision of the former cartage rates was made conceding an aggregate increase of 24 per cent to the cartage companies, but the employees received only a 15 per cent increase, and they were not represented at the conference at which the revised cartage rates were agreed upon. Their negotiations with the management had been in progress upon a demand for an increase of 20 per cent in the rates of pay.

Some discussion was had as to whether or not the existing schedule of working rules and rates of pay had been made for a period of one year, but article 15 thereof reads as follows: "This schedule shall be effective as from March 1st, 1920, and thereafter until thirty days'

notice is given by either party cancelling the same." The Board took the view that this agreement could only be construed as an agreement for thirty days, and the parties were both willing that any new agreement should contain a similar stipulation.

It was also represented that the competitors of this employing Company could not increase the wages of their teamsters and chauffeurs, and that their hours of service were as long, and in some cases longer than those of the Canadian National Transfer Company.

It appears that recently some of the wholesale grocers of the City of Winnipeg, in order to meet competition to their customers at outlying places, adopted the practice of paying the Winnipeg cartage instead of charging it forwarded to the customers, and some have been doing their own cartage to the Railways, using their own delivery wagons, while others have engaged private cartage companies to do this work. The cartage so far as these shippers are concerned appears to be, and may continue to be, an item of overhead expense accruing to them, which they would absorb, and for which they may not be able to obtain a compensating increase in prices from their customers.

The employees on the other hand have shown a somewhat distressing situation so far as married men with families are concerned, and while the last month or two shows a decline in some of the staple commodities, there is no indication of declining prices in the matter of rents and fuel, and in many other articles. As illustrating this, one of the teamsters showed his monthly budget of the necessities of life for himself, his wife and four children, exclusive of rent, fuel and clothing as amounting to \$133.75. But he is a returned soldier, who suffers a partial physical disability by reason of which he and the members of his family receive a total pension of \$60.00 per month. But it was represented that other employees with families were not fortunate enough to be in the possession of a disability which would bring in a

revenue, and that their monthly earnings would not purchase a reasonable living for their families.

The employers apprehend that the increase in wages demanded by these employees, if granted, would compel the Company to close down their business, with the result that these employees would find themselves out of employment or compelled to take employment from private cartage companies at lower rates for longer hours of service.

In considering the various questions involved in the dispute and the representations made to the Board on behalf of the respective parties, I deeply regret to find my views are not in accord with those of my colleagues.

The representative of the employer, Mr. Persse, of Messrs. Teese & Persse, Ltd., whose company have a large business in the wholesale grocery trade, was placed in the peculiar position of deciding the questions in dispute in which his company was more or less directly or indirectly interested. It was represented by the employer that the question of higher wages resolved itself into a necessity of higher cartage rates, and the evidence was that this would directly affect firms engaged in the wholesale grocery business as well as others because higher wages would necessitate higher cartage rates at the expense of these firms. It is indeed to be regretted that any party to a dispute should nominate a person for appointment to a board whose business places him in this embarrassing position. It is not the first time in my experience on conciliation boards that this has occurred, and it would seem to me that the Department might very well direct the attention of the parties to a dispute, to Section 11 of the Act.

It appears to me that if the employees concerned in this dispute, who have had only a 15 per cent increase since 1918 are now to have a deaf ear turned to their urgent necessities simply because there is a slight decline in the cost of living at the present time, and to leave out of consideration the fact that from month to

month during the past two and a half years the cost of living has mounted higher and higher, we need not expect conciliation, arbitration or any other peaceful process to be either an influential or a controlling factor in settling their demands in the future. Sooner or later the reaction will occur. I know of no other means which will more effectually induce the workers to adopt the standard of "might is right".

It cannot be disputed and indeed the employer does not seriously deny that these employees must find it a difficult problem to feed, clothe and care for their families and pay the present rates for the necessities of life on their present incomes. The landlord's rate of rent, the coal merchant's price of coal, and in fact the prices of all other necessities of life are not arrived at by mutual conference or adjusted to conform to the wages received by these employees. Wages that are considered on the basis of a living wage should therefore in all fairness be reasonably sufficient to maintain a decent standard of living, and should be adjusted to conform to the rise in prices, if a decline in prices is to have any bearing.

I confess I am unable to follow the logic, or to find either equity or justice in conditions of employment which compel those employees to meet the increasing cost of living from month to month, and, when at last driven to demand an increase in their incomes to enable them to obtain a decent living, to be told that because there are now indications of a decline in the cost of living their demands are not well founded. On the other hand to say that the demands of these employees are not to receive favourable consideration lest the Company be forced out of business or the shippers required to pay more for the service, is to say that the Canadian National Transfer Company should continue its existence only by the sacrifice of these employees and their families, and that the shippers of Winnipeg must maintain the present cartage rates in the interests of their profits by those sacrifices. Is this what is termed the

progress and best interests of the city of Winnipeg?

Having regard to all matters involved in the dispute I recommend that the Schedule hereunto annexed and marked exhibit "A" to this Report should be adopted by the parties as a basis of settlement at the present time.

With reference to the hours of service, it appears that heretofore the men were required to come on duty at ten minutes to seven o'clock in the morning and do a certain amount of preparatory work about their teams and wagons, so as to be ready to leave the barns at 7.25 a.m. This so called "preparatory work" has never been paid for, or at least reckoned in the daily hours of service. In the evening teams are not required after 4.45 to proceed for loads but may drive to the barn, and some ten or fifteen minutes service, such as unharnessing their teams, takes place after they have unhitched, but the payment of overtime does not commence until after 5.30 p.m.—the actual time on duty being approximately nine and a half hours per day for five days a week and five and a half hours on Saturday, exclusive of the lunch hour.

There can be no justification for men being on duty for any purpose whether it is called "preparatory time" or otherwise, without their time being counted and paid for as part of their day's work.

With reference to the demand of the employees for annual vacation with full pay, the Board were unanimously impressed by the merits of this claim, but I feel that whatever concessions are made should be in the shape of financial benefit, as that is undoubtedly the most urgent need of the employees at this time.

I also recommend that the wages embodied in the attached Schedule should be adopted. An increase amounting approximately to \$15.00 per month is provided for therein, together with pay for all time on duty. It may be that in addition to the \$15.00 a month there will be an obligation to pay one-half hour's

time daily, which time has not heretofore been paid. But as already stated I cannot see the justice of requiring men to be on duty at work for the employer a certain period of time each day without being paid therefor.

All of which is respectfully submitted.

(Sgd.) D. CAMPBELL,
Representing the Employees.

Regina, Sask.,
Dec. 14th, 1920.

EXHIBIT (A).

CANADIAN NATIONAL TRANSFER CO.

AND ITS

EMPLOYEES, ACTING AS TEAMSTERS AND
CHAUFFEURS, WINNIPEG.

ARTICLE 1.—This agreement shall govern all working hours, conditions of service and rates of pay of Teamsters and Motor Truck Drivers (Stablemen not included), and shall supersede agreements previously made, becoming effective September 1st, 1920.

ARTICLE 2.—Employees will not be discriminated against for becoming members of a Union or Brotherhood, nor for serving on Committees Representing Employees.

ARTICLE 3.—Employees off duty on proper leave of absence, or on account of sickness for a reasonable length of time, will not lose their seniority rights, provided such absence does not exceed three (3) months.

ARTICLE 4.—In reducing forces, seniority shall govern; when forces are increased, employees will be returned to the service and positions formerly occupied in their proper order of their seniority, providing services are satisfactory. The rules of seniority do not apply to employees having less than six (6) months service.

ARTICLE 5.—A list showing seniority of all employees governed by this schedule, and the date of their last entry into the service of the Canadian National Transfer Company, will be posted by the Company at all Barns and Garages, within sixty days after the adoption of this schedule, and will be revised and posted in the month of January in each succeeding year in which this schedule remains effective.

ARTICLE 6.—All grievances shall be taken up with the proper officers of the Company. If any man has been wrongfully dismissed and is reinstated in the Company's service, he will be reimbursed for lost time.

ARTICLE 7.—The regular work day shall commence at any time the Company may appoint between seven and eight o'clock in the morning, and shall include all time from the time of reporting at the Barn in the morning until leaving the Barn in the evening.

ARTICLE 8.—Nine and one half hours exclusive of a lunch hour shall constitute a day's work except on Saturday, in which case five and one half hours shall constitute a day.

ARTICLE 9.—All time worked in excess of these hours will be paid for as overtime at the rate of time and one half, except that if required to work on Sunday the time worked shall be paid pro rata to the regular hourly rate. Fractional parts of an hour less than five minutes shall not be counted.

ARTICLE 10.—Full time with pay will be allowed all employees for legal and proclaimed holidays. When necessary for special service on Saturday afternoons and holidays, employees will be paid extra pro rata to their regular wages, minimum call one half day.

ARTICLE 11.—The rate of pay for all Teamsters and for Drivers of motor trucks of less than two ton capacity will be 65 cents per hour, and for Drivers of motor trucks of two ton capacity or more shall be 70 cents per hour.

ARTICLE 12.—All teams loaded north of Watter Street must pass the Cartage Office en route to Barn or Team tracks, and shipping bills must be handed in to the Cartage Office to be stamped until 4.50 p.m.

ARTICLE 13.—Fifteen (15) minutes will be allowed for greasing of Lorries on Company's time.

ARTICLE 14.—A Rest House will be maintained for convenience of Teamsters during lunch hour.

ARTICLE 15.—This schedule shall become effective as from September 1st, 1920, and thereafter shall remain effective until superseded by a new agreement, upon thirty days' notice.

For the Company.

For the Employees]

SETTLEMENT OF DISPUTE IN CONNECTION WITH COAL MINING OPERATIONS IN NOVA SCOTIA

DURING the month of November an agreement was reached in Montreal between representatives of the Dominion Coal Company, the Nova Scotia Steel and Coal Company and the Acadia Coal Company respectively, and representatives of District 26 of the United Mine Workers of America for the settlement of a dispute affecting wages and working conditions in the coal mines controlled by those companies in Nova Scotia. The terms of the agreement reached in Montreal have since been ratified by a referendum vote of the members of the United Mine Workers of America in District 26, comprising all the coal fields of Nova Scotia and New Brunswick. The dispute thus terminated was one which had been in existence since the preceding spring.

The conference in Montreal, at which a settlement was reached, was summoned by the Department of Labour of Canada and continued from October 20 to October 21 and from November 3 to November 8.

Those present at the conference in Montreal were as follows: Messrs. R.

M. Wolvin, President, E. P. Merrill, General Manager, and H. J. McCann, Assistant General Manager, of the Dominion Coal Company, Limited; D. H. McDougall, President, and A. S. McNeill, Superintendent of Mines, of the Nova Scotia Steel and Coal Company, Limited; D. H. McDougall, Vice-President of the Acadia Coal Company, Limited; Robert Baxter, President, and J. B. McLachlan, Secretary-Treasurer, of District No. 26, United Mine Workers of America, and John P. White, of Cleveland, Ohio, former President of the United Mine Workers of America, who attended on behalf of the international headquarters. The Department of Labour was represented by Mr. Gerald H. Brown, Assistant Deputy Minister. Mr. E. McG. Quirk, chairman of the Royal Commission appointed to investigate coal mining operations in Nova Scotia and New Brunswick, also attended on invitation.

The Montreal agreement, so called, was first considered by the employees concerned at a district conference in Truro, when it was ordered that the

whole matter should be referred to the local unions of District 26, and that the district officers should visit the locals for the purpose of explaining the situation. Messrs. Baxter and McLachlan, who had attended the meetings in Montreal, visited the various mining districts in the interval which elapsed between the conclusion of the Truro conference on November 18 and December 14 when the referendum vote of the district membership was taken.

The international headquarters, which had participated through Mr. John P. White in the meetings at Montreal, was also represented by several of its organizers in District 26 during the discussion of the proposed terms of settlement.

After the ratifications of the agreement by the members of District 26 the terms of settlement were communicated by the district officers to all of the coal mining companies in Nova Scotia and New Brunswick. On January 10, when the present article was written, the agreement had been signed with the Dominion Coal Company, the Nova Scotia Steel and Coal Company and the Acadia Coal Company respectively, and information furnished on the employees' behalf was to the effect that other companies were expected to sign up during the ensuing week.

Reference was made in the September number of the LABOUR GAZETTE (see pages 1166 to 1184) to the report of the Royal Commission which had investigated the coal mining operations in Nova Scotia and New Brunswick during the past summer in connection with the present dispute. Reference was also made in the July number of the LABOUR GAZETTE to the report of a Board of Conciliation and Investigation established under the Industrial Disputes Investigation Act, which had recommended the appointment of a Royal Commission with full power to deal with the whole coal mining industry of Nova Scotia with a view to making such recommendations and findings as in its judgment would tend to stabilize the

industry and to best conserve the interests of the miners, operators, and the public (see LABOUR GAZETTE, July 1920, pages 831 to 833).

The findings of the Royal Commission were not accepted in their entirety by the employees concerned, but were used as a basis of discussion during the conference in Montreal between the parties concerned. In the interval between the report of the Royal Commission and the conference, which was convened by the Department of Labour in Montreal, it was understood that a strike vote had been taken of the members of District 26 of the United Mine Workers of America, and that the same indicated the probability of a strike in case a settlement was not otherwise arrived at.

The terms of settlement of the above mentioned dispute which were reached in Montreal on November 8 are as follows:—

Montreal, November 5th, 1920.

Robert Baxter, Esq., President,
J. B. McLachlan, Esq., Secretary-Treasurer,
District No. 26, United Mine Workers of America.

Dear Sirs:

Pursuant to the understanding arrived at in the negotiations which have been carried on during the past few days, we hereby make an offer on behalf of each of the following companies covering rates and conditions in each of such companies as embodied in the attached memorandum of even date which has been initialled by all parties concerned.

Yours truly,

For Dominion Coal Company, Limited,

(Sgd.) R. M. WOLVIN,
President.

For Nova Scotia Steel and Coal Co., Ltd.,

(Sgd.) D. H. McDougall,
President.

For Acadia Coal Company, Limited,

(Sgd.) D. H. McDougall,
Vice-President.

UNITED MINE WORKERS OF AMERICA, DISTRICT
No. 26.

At Montreal, November 5th, 1920.

R. M. Wolvin, Esq.,
President, Dominion Coal Company, Limited,
D. H. McDougall, Esq.,
President, Nova Scotia Steel and Coal Co.,
Limited.
D. H. McDougall, Esq.,
Vice-President, Acadia Coal Company, Ltd.

Gentlemen,

Replying to your letter of even date with enclosed memo looking toward a wage agreement covering the period from November 1st, 1920, to November 30, 1921, beg to state that we accept the provisions of the proposed agreement as a settlement, subject to the approval of the members of District No. 26, U.M.W. of A.

We are respectfully yours,

On behalf of District No. 26, U.M.W. of A.

ROBERT BAXTER,
President.

J. B. McLACHLAN,
Secretary.

On behalf of the International Union
U.M.W. of A.

JOHN P. WHITE.

MEMO RE CONFERENCE BETWEEN CERTAIN
COLLIERY OPERATORS IN NOVA SCOTIA AND
REPRESENTATIVES OF THEIR EMPLOYEES.

Montreal, Can., Nov., 8th, 1920.

On invitation of the Department of Labour of Canada, representatives of the Dominion Coal Company, Limited, Nova Scotia Steel and Coal Company, Limited, and the Acadia Coal Company, Limited, met representatives of the United Mine Workers of America, District No. 26, at Montreal on October 20th and 21st for the purpose of considering means of overcoming wages and labour difficulties which had developed in that district and which had previously been made the subject of investigation and report by a Royal Commission during the months of July, August and September preceding. Those present at the conference were as follows: R. M. Wolvin, President, E. P. Merrill, General Manager, and H. J. McCann, Assistant General Manager, of the

Dominion Coal Company, Limited, D. H. McDougall, President, and A. S. McNeil, Superintendent of Mines, of the Nova Scotia Steel and Coal Company Limited, D. H. McDougall, Vice President of the Acadia Coal Company, Limited, Robert Baxter, President, and J. B. McLachlan, Secretary-Treasurer, of District No. 26, United Mine Workers of America. The Department of Labour was represented by Mr. Gerald N. Brown, Assistant Deputy Minister. Mr. E. McG. Quirk, Chairman of the Royal Commission, also attended on invitation.

The meetings on October 20th and 21st were without definite result, it being the desire of the labour representatives that an adjournment should be made to permit of the attendance of a representative of the international headquarters of their labour organization. The conference was accordingly adjourned till November 3rd when the discussions were resumed, Mr. John P. White, of Cleveland, Ohio, former president of the United Mine Workers of America, attending on behalf of the international headquarters. The conference was continued until November 8th. Discussions showed that both sides concerned were unwilling to accept the findings of the Royal Commission. After canvassing the situation from every angle, recognising the importance of industrial peace in the coal fields at this time and with a full knowledge on both sides that the agreement of January 1920 was still in effect, it was deemed expedient in the interests of peace and harmony that something should be done to improve the existing labour situation. The representatives of the Dominion Coal Company, Limited, Nova Scotia Steel & Coal Company, Limited, Acadia Coal Company, Limited, each submitted the following as its final offer:—

Tonnage rates to be increased 10c. per ton over present schedules.

All datal hands to be advanced 55c. per day above present schedule rates.

All local contract rates to be advanced 12½ per cent, over those in existence at the present time.

This agreement when approved by the members of District 26, United Mine Workers of America, to become effective from the first of November 1920, to November 30th, 1921, both sides to agree to meet in Halifax twenty days before the expiration of this agreement for the purpose of arranging a new understanding.

The following provisions were also agreed to by the representatives of the companies and the men for inclusion in the new agreement which is to supersede the existing agreements, namely:—

MANAGEMENT OF MINES.

The right to hire and discharge, the management of the mine and the direction of the working forces are vested exclusively in the company, and the United Mine Workers of America shall not abridge this right. However, the company agrees not to discharge employees or refuse work to applicants on account of, or because of, their affiliation with the United Mine Workers of America.

Employees shall perform such work as the management may direct.

HOURS OF LABOUR.

Hours of labour to be in accordance with the provisions of the agreement of February 21st, 1919, in this respect, as follows:—

The collieries will commence to hoist coal at 7 a.m. at which time all the men must be in the mine.

The day's work will cease at 3 o'clock, when all arrangements will be available for conveying the men to the surface.

The surface men around the bankhead and screens associated with the handling of coal are to be on duty between the hours of 7 a.m. and 3 p.m. and for a short time after, if necessary, for the purpose of attending to such duties as will facilitate their own work, such time not to exceed a half hour.

The standard of other surface labour around the collieries to be from 7 a.m. to 4 p.m., with half an hour for dinner.

Where continuous attendance is required the shifts will be eight hours instead of twelve both surface and underground.

NO STOPPAGE OF WORK.

No stoppage of work shall take place owing to any dispute arising at any mine under the jurisdiction of District No. 26, except for refusal of employers to pay wages on the regular pay-day without satisfactory explanation, or danger to life and limb.

It is distinctly understood that no other grievance shall be considered where men suspend work to enforce adjustment and employees striking in violation of contract shall not be sustained in such course. The international organization and District No. 26 officials guarantee the fulfillment of this agreement and pledge their co-operation and support in every legitimate way to maintain and encourage increased output.

DUTIES AND LIMITATIONS OF MINE COMMITTEE.

The duties of the mine committee shall be confined to the adjustment of disputes between the mine official and any of the members of the United Mine Workers of America working in and around the mines arising out of this agreement or any local agreement made in connection therewith where the mine official and said miner or mine labourer have failed to agree. Therefore, the matter in dispute shall be referred to the district executive of the U. M. W. of A. and the District Superintendent of the company and the higher officials. In the event of their failure to settle the matter it shall be referred to arbitration and the majority decision shall be final and binding upon all concerned. If within ten days the representatives of the operators and miners fail to agree upon an arbitrator then the selection of an arbitrator shall be made by the Prime Minister of Nova Scotia who shall make such selection within ten days and such selection shall be final, miners to continue to work from the inception until the final adjustment.

FUNERALS.

It is recommended that the operators' and miners' executive draft a suitable rule to govern the operation of the mines in the event of fatal accidents and funerals.

HOUSING.

Housing and rentals are not a part of this contract. However, we recognize the necessity of improving the housing conditions in the mining centres but would respectfully refer the subject back to the management and those who may be affected and recommend that in looking toward betterments in improved housing conditions that where substantial improvements and extensive repairs are requested by the occupants and the

same are made that such rental charges covering such substantial improvements and extensive repairs be mutually agreed to between the officials of the company and the parties affected.

PRICE OF MINERS' COAL

It is recognized that the price charged the miners for house coal has not been in keeping With the cost of production and it is felt that in future the price to the miner for his own use must be considerably advanced and for this reason the price where it is less is fixed at \$2.25 per ton at the mine or coal yard. Where it is necessary to transport the coal from the mining centres over a railway in order to make delivery the cost of said transportation shall be added to the above price.

STRIKES AND LOCKOUTS IN CANADA DURING DECEMBER, 1920

THREE strikes, involving 725 employees were reported as having commenced during December. There were in existence at some time or other during the month 10 strikes, involving about 1,554 workpeople. The total time loss on account of industrial disputes was estimated at 14,654 working days, as compared with 23,442 in November, 1920, and 51,853 in December, 1919. The time loss occasioned by the three strikes which began in December was 3,000 working days, while

a loss of 11,654 is charged to the seven strikes that commenced prior to December. Termination was reported in the case of 3 strikes which commenced prior to December. The three strikes commencing during December terminated during the month, leaving the following four strikes affecting 379 workpeople on record on December 31:—loggers, Jackson Bay; plumbers and shoe workers, Montreal, and railway employees at Sydney.

Disputes by Industries

The following is a review of the disputes by industries in the order in which they appear in the statistical table. A brief summary is given of the more important strikes.

MINES, SMELTERS, QUARRIES, CLAY PRODUCTS, ETC.—The strike of coal miners in the Edmonton district terminated on December 6, the miners resuming work pending the award of a Con-

ciliation Board, appointed by the Department. About 500 employees in seven different companies were involved in this strike which commenced on November 22.

METALS, MACHINERY AND CONVEYANCES.—The strike of railway employees at Sydney, for increased wages, remained unterminated at the end of the month.

CLOTHING.—One Company in Montreal was involved in a strike of about a week's duration. Its employees, numbering 200, struck against a reduction in wages. Work was resumed on December 15.

TEXTILES.—A dispute over working on a religious holiday resulted in a time-loss to about 500 employees at Three Rivers. The affair has been characterized as a "misunderstanding" and was adjusted in three days.

STRIKES AND LOCKOUTS DURING DECEMBER, 1920

Industry or Occupation.	Particulars.	No. of employees affected.	Time loss in working days.
Strikes commencing prior to December, 1920			
LUMBERING— Loggers, Jackson Bay, B. C.	Commenced November 14. Men objected to being put on piece-work. Unterminated.	60	1,560
MINES, SMELTERS, QUARRIES, CLAY PRODUCTS, ETC.— Coal miners, Edmonton, Alta.	Commenced November 20. For increased wages. Men returned to work pending an application for a Board of Conciliation under the Industrial Disputes Investigation Act. Work resumed December 6	450	1,800
BUILDING AND CONSTRUCTION— Plumbers, Montreal, Que.	Commenced October 4. For increased wages. Unterminated.	150	3,900
METALS, MACHINERY AND CONVEYANCES— Moulders, Collingwood, Ont.	Commenced June 2. For increased wages. Information received in the Department indicates employment conditions no longer affected.		
Plumbers, steamfitters and sheet metal workers Vancouver, B.C.	Commenced October 4. For increased wages. Information received in the Department indicates employment conditions no longer affected.		
Railway employees, Sydney, N.S.	Commenced November 22. For increased wages and improved working conditions. Unterminated.	150	3,900
CLOTHING— Shoe workers, Montreal, Que.	Commenced November 8. Against reduction in wages. Unterminated.	19	494
Strikes commencing during December, 1920			
PRINTING AND PUBLISHING— Lithographers, Ottawa, Ont.	Locked out December 6. Demanded an increased bonus. Settled by negotiations; work resumed December 20.	25	300
CLOTHING— Clothing workers, Montreal, Que.	Commenced December 8. Against a decrease in wages. Settled by arbitration; work resumed December 15.	200	1,200
TEXTILES— Textile workers, Three Rivers, Que.	Commenced December 9. Objection to working on religious holiday. Work resumed December 13. The affair has been characterized as a "misunderstanding".	500	1,500

STRIKES AND LOCKOUTS IN THE UNITED KINGDOM DURING NOVEMBER, 1920

THE following details with regard to strikes and lockouts in the United Kingdom during November, 1920, based on returns from employers and workpeople, are taken from the December issue of the British *Labour Gazette*.

NUMBER, MAGNITUDE AND DURATION.—The number of trade disputes, involving a stoppage of work, reported to the Department as beginning in November was 60, as compared with 71 in the previous month, and 48 in November, 1919. In these new disputes nearly 15,000 workpeople were directly involved and about 1,000 indirectly involved (i.e., thrown out of work at the establishments where the disputes occurred, though not parties to the disputes).

The dispute involving about 1,100,000 coal miners, etc., throughout Great Britain, which began in October, continued during the first few days of November. Particulars of this dispute were given in the November issue of the *LABOUR GAZETTE*. In addition, about 22,000 workpeople were involved, either directly or indirectly, in 75 other disputes which began before November and were still in progress at the beginning of that month. The total number of disputes in progress in November was thus 136, involving about 1,138,000 workpeople, as compared with 1,200,000 workpeople involved in disputes in progress in October, 1920, and 98,000 in November, 1919.

CAUSES.—Of the 60 new disputes, 31, directly involving over 8,000 workpeople, arose on demands for advances in wages; 11, directly involving nearly 3,000 workpeople, on other wages questions; 10, directly involving nearly 3,000 workpeople, on questions respecting the employment of particular classes or persons; and 8, directly involving over 1,000 workpeople, on other questions.

RESULTS.—Of the disputes in progress in November, settlements have been effected in the case of 27 new disputes, directly involving nearly 9,000 work-

people, and 23 old disputes, directly involving over 13,000 workpeople. Of these disputes, 8, directly involving about 1,000 workpeople, were settled in favour of the workpeople; 19, directly involving about 8,000 workpeople, in favour of the employers; and 23, directly involving about 13,000 workpeople, were compromised. In the case of 16 disputes, directly involving nearly 3,000 workpeople, work was resumed pending negotiations.

The following table classifies the disputes by groups of trades:—

Groups of Trades	Number of Disputes			Number of Workpeople involved in all disputes in November.	Aggregate loss of working days during November.
	Started before November 1st.	Started in November	Total		
Building.....	14	5	19	5,000	88,000
Mining and Quarrying.....	10	6	16	1,106,000	3,327,000
Metal Engineering and Shipbuilding.....	18	14	32	6,000	72,000
Textile.....	10	4	14	2,000	20,000
Transport.....	4	10	14	14,000	79,000
Other Trades.....	16	15	31	3,000	35,000
Local Authority Service.....	4	6	10	2,000	10,000
Total, Nov., 1920...	76	60	136	1,138,000	3,631,000
Total, Oct., 1920...	93	71	164	1,200,000	13,474,000
Total, Nov., 1919...	65	48	113	† 98,000	* 1,907,000

* Revised figures.

† Exclusive of the coal strike.

Of the 3,631,000 working days lost in November by all disputes in progress about 3,545,000 were lost by disputes which began before November and were still in progress at the beginning of the month, and about 86,000 by disputes which began in the month.

CANADA'S PROGRAMME FOR MEETING UNEMPLOYMENT

(a) Address by Minister of Labour delivered before Members of the American Association for Labour Legislation. (b) Letter from Minister of Labour to Hon. Walter Rollo, Minister of Labour for Ontario.

THE Honourable G. D. Robertson received early in December a request from Dr. J. B. Andrews, Secretary of the American Association for Labour Legislation, to address the members of that body at its annual meeting to be held in New York, December 29-30, on the subject "Canada's Programme for

Meeting Unemployment", and the Minister promised compliance with this request. The meeting of the Association took place in the Astor Hotel, New York, on the dates indicated. Senator Robertson's address was delivered on the afternoon of December 30, and was as follows:—

Canada's Programme for Meeting Unemployment

The Secretary has allotted to me the task of addressing this Association upon the subject of "Canada's programme for meeting unemployment."

If what we have tried to do in Canada indicates to you poor management, I will, as Minister of Labour for Canada, be in the embarrassing position of having to assume the responsibility for having failed to properly cope with the situation. If, on the other hand, some of the steps taken and results obtained seem to merit commendation, let it be clearly understood that it is due to the admirable spirit of co-operation displayed and practised by all of our citizens in dealing with an important problem of national concern.

The population of the United States is approximately twelve times that of Canada, therefore our plans and accomplishments in Canada may seem insignificant to this audience, unless the difference in population is borne in mind.

Our Federal Government gave serious attention to the question of organizing to cope with unemployment early in 1918, knowing that when the European war ended the re-establishment of our soldiers and civilian war workers would be a gigantic task. In June, 1918, every person over sixteen years of age resident in Canada was required to register,

showing their age, nationality, occupation, etc. The male population over sixteen in Canada at that time was 2,656,549. About 200,000 men and 60,000 women were engaged in war work in Canada, in addition to 350,000 men overseas under arms and in hospitals in various stages of convalescence.

These facts give one an idea of the task confronting us when it came to re-establishing in civil life over half a million men in a country where the total male population, including those to be absorbed, was less than three and one-quarter million.

In 1918, legislation was passed by the Federal Parliament empowering the Federal Department of Labour to organize and carry on a Government employment service, in co-operation with the Provincial authorities. Regulations were drafted applicable to the needs and the service was established. The Provincial Governments opened offices where necessary, adopted the Federal Government's general regulations, and both shared equally in the cost of maintenance. Some 90 free employment offices were established throughout Canada, in all cities, beginning in March, 1919. During the first 15 months of their existence over 600,000 persons

we placed in positions, without cost to the employer or workman, and at a cost to the Government of less than one-half the amount per person that was formerly paid by the individual as commission to the private employment agent. Five Provinces have, by legislation, abolished private employment agencies and others have substantially reduced the number of licences issued. Another Province purposes shortly to abolish private employment offices altogether. Offices in each Province report to a Provincial Superintendent and a telegraph synopsis of labour supply and requirements is wired daily to the Federal clearing house. By this clearing house system a surplus supply of labour in one locality or Province can readily be transferred to another where it is in demand. Without this connecting link, unemployed labour would exist in one locality and a demand for labour in another, without either the unemployed workman or the employer desiring labour knowing where their needs could be met. Special rates were arranged and are still in effect whereby a workman sent to employment over a hundred miles distant travels at reduced rates on railways, on presentation of a certificate from a Government employment office, showing destination and indicating that the bearer is sent by the employment office. More than 30,000 men have been placed in employment at distant points who could not have been provided with employment within the territory served by an individual office. Neither does this include the annual harvest excursion from Eastern Canada to the Western prairies.

Another good service worthy of mention is that much skilled labour of a particular kind which employers have asked to import from Europe or elsewhere, has been located in Canada and supplied locally through our clearing house service. During 1920 applications to import some five thousand skilled workers of various sorts, under contract, were received by our Immigration Department from employers, who could not obtain the labour required locally.

The Immigration Department first refers such requests to the Department of Labour, and importation is authorized only when requirements cannot be filled in Canada. As a result, only in 770 cases was it necessary to go outside of Canada to fill the requirements. Our present unemployment problem is, therefore, easier than it would have been had these precautions not been taken.

The Employment Service also served a useful purpose during the winter of 1919-1920 when the Federal Government rendered aid by way of cash gratuities to unemployed returned soldiers. Each was required to register at one of the 90 employment offices and was only entitled to aid on presentation of a certificate that employment was unobtainable. It was estimated that 45 million dollars would be necessary to meet this situation, but, largely owing to this precautionary measure against abuse, the amount actually disbursed was less than five million.

During the summer of 1920, every man in Canada willing to work had employment. In October indications of serious contraction in business appeared; not until December, however, was there any substantial amount of unemployment in Canada. To-day there is less than on the same date of 1913-1914.

The Federal Government is carrying on works of various sorts to aid in providing employment, appropriations for this work aggregating a substantial number of millions. Provincial and municipal authorities are also doing considerable in the same direction. Private employers have been urged and many have adopted the policy of reducing hours of work or the number of days per week, rather than reduce the staff.

Finally, the Government has said that whenever emergency relief is necessary, to care for people who cannot be employed, the necessity for and extent of relief must be determined by municipal authorities, and that the Federal Government will pay one-third of the money so disbursed, provided

relief is given only on presentation of a certificate from our employment service indicating that the bearer has applied for but could not be given employment.

An appropriate form of certificate was last week furnished to each of the 90 employment offices in Canada, which certificate will be given to applicants for whom employment cannot be obtained; they will present this certificate to the proper municipal authorities, who are to be the sole judges as to the necessity for and extent of relief. The municipal authorities will endorse on the reverse side of the certificate the amount disbursed, which the applicant also acknowledges receipt of; the certificate is then returned to our employment offices and becomes a voucher, showing the amount disbursed by the municipality and the amount received by the applicant, thereby amply protecting the Federal Government and the public funds.

If ever a system of unemployment insurance is adopted in Canada, the employment service will undoubtedly be the instrument used in administration.

Our Purchasing Commission, which supervises the buying of Government supplies, is kept posted by our Director of Employment Service when a particular industry is slack so that orders can be placed where employment is most needed.

Our population and industries are of course small indeed as compared with this great country, but this fact only seemed to intensify the need of a Government employment service, because of the great distances and comparatively limited opportunities for employment in many localities.

In May, 1919, the Federal Parlia-

ment imposed an excise tax on luxuries purchased in Canada, with a view to restricting extravagance. The result was that our people confined purchases largely to range of prices below the taxable limit. Prices immediately began to decline; retailers curtailed purchases of fancy goods as demand fell off and are now in an infinitely better position to re-stock at reasonable prices instead of being loaded up with goods purchased at prices existing a few months ago. The luxury tax, having served the purpose intended, was abolished on December 20th, 1920, except on liquors and a few other things. Already business is showing an improvement. Manufacturers are increasing output which, in turn, is absorbing labour and will substantially aid in reducing the number of unemployed in the country.

There is sure to be a big demand for skilled and unskilled labour in the building trades this coming year if not strangled by further increased wage demands. Building cannot, however, go on extensively if construction costs are to be further increased. Much, therefore, depends on the successful adjustment of wage rates for the new year.

A number of our Provinces have enacted legislation fixing minimum wage rates for women; others are contemplating similar action. Ontario has recently, by legislation, provided pensions for mothers with dependents, and the law is in operation.

It would be manifestly improper for me to suggest to this Association as to legislation desirable or applicable to United States conditions, therefore have tried to relate, in simple words, what we have done in Canada in dealing with labour problems there. Should our experience suggest anything to you that would seem useful, I shall feel both honoured and pleased with having had the opportunity of presenting them.

Letter of Minister of Labour to Hon. Walter Rollo, Minister of Labour for Ontario.

THE policy of the Dominion Government with regard to unemployment was announced on December 14 by the Honourable G. D. Robertson, Minister of Labour, in the following letter addressed to the Honourable Walter Rollo, Minister of Labour for Ontario.

Ottawa, December 14, 1920.

Dear Mr. Rollo:

I beg to refer to our conversation of last week respecting unemployment. The views I then expressed have been since submitted to my colleagues of the Federal Government and have been approved. I communicate with you for the purpose of placing them in written form.

The situation should be met to the utmost possible extent by the provision of work instead of the provision of relief. In this respect the Federal Government is doing and will continue to do the utmost within its power consistent with the authority granted it by Parliament. As respects Toronto as to which our conversation had special reference, the Government will complete the two Government ships at the Dominion shipyards, proceeding with the work forthwith. The contract for the engines for these vessels has also been placed in that city. This will give employment to something like four hundred men, who, so far as practicable, shall be taken from the city. It has also been decided to continue the Welland Canal construction work throughout the winter. The furtherance of other projects as well is under consideration.

The Government has taken up with large employers of labour the great desirability of doing everything within their power to aid, and I am glad to see evidences of the success of our efforts. The manufacturers in Toronto have, I believe, adopted as a general policy the practice of reducing working time instead of reducing staffs. I feel sure the

provincial and municipal authorities will join in to provide a substantial amount of employment and in this way the situation should be materially relieved. Every possible effort should be made to avoid the necessity of any other form of relief.

Should, however, the emergency relief measures become necessary by reason of utterly unavoidable shortage of employment, the Federal Government is willing to co-operate on the following basis:

The organization for determining where relief must go and for distributing the same shall be provided by the municipal authorities, and in each case before relief is given and as relief is continued a certificate must be obtained from the Government employment service, showing that the applicant cannot be given employment. The general system and details and the safeguards adopted must be approved by or on behalf of the Federal Government. If this is done the Federal Government is willing to contribute, in places where relief on any substantial scale appears to be necessary, one-third of the amount actually disbursed on this relief provided the other two-thirds is either paid by the municipality or paid by the municipality and the province jointly.

In this connection I may again emphasize what I stated to you personally, that in normal times these problems are dealt with wholly locally. The Government of Canada, however, under present circumstances, feels justified in co-operating to the extent set out above. It is in some degree correct that the numbers of the unemployed at the present time are increased by reason of the general contraction in industrial activity following upon a period of abnormal prices during the war.

Under extraordinary circumstances the Federal Government has co-operated as well at other times in the provision of relief, notably in respect

of those in need on account of drought conditions in portions of Western Canada. In such cases of course the local authorities have joined in the sharing of the burden.

The above is, necessarily, as you can understand, a statement of general policy.

Yours faithfully,

(Signed) G. D. ROBERTSON,
Minister of Labour.

Action being taken

Following the receipt of the above communication, the Ontario Government indicated its eagerness to co-operate on the proposed programme, and in Toronto and Hamilton the necessary organization for granting relief has already been completed. Steps have also been taken by the Government to secure the co-operation of other provinces and municipalities.

EMPLOYMENT SERVICE COUNCIL OF CANADA

A MEETING of the Executive of the Employment Service Council of Canada was held at Ottawa on December 27-29 last. The following members were present: Messrs. W. B. MacCoy, K.C., chairman, J. A. Bowman, vice chairman; Arthur Martel, representing the Trades and Labour Congress of Canada; E. Blake Robertson, representing the Canadian Manufacturers' Association; and Bryce M. Stewart, of the Department of Labour, secretary. There were also present various other members of the Council including Frank Hawkins, representing the Canadian Lumbermen's Association; H. C. Hudson, representing the Province of Ontario; T. A. Stevenson, representing the Department of Soldiers' Civil Re-establishment; C. C. MacNeill, representing the Great War Veterans' Association.

At the request of the Chairman those present indicated employment conditions as they had found them. Mr. Howard, of the Department of Labour, stated that there was considerable unemployment at Halifax, St. John and Sydney in the Maritime provinces. The municipality of St. John had drafted a programme of public works to relieve the situation. He reported that the number of unemployed in Prince Edward Island was growing daily, and workers were leaving the island to seek work on the mainland. He was advised by Mr. Ainey, of the Quebec Employment Ser-

vice, that although the situation was considered to be very bad, particularly in Montreal, charitable organizations in that city reported fewer applications for relief than might be expected under the circumstances. Mr. Hudson estimated there were about 17,000 unemployed in Toronto. At a meeting of citizens presided over by the Mayor of Toronto a committee had been appointed which was co-operating with the Toronto offices of the Employment Service and functioning to some extent as an Advisory council although not officially recognized as such. Mr. Stevenson stated that conditions in British Columbia were serious. Practically all the logging camps and saw mills were closed, and other industries were reducing staffs and cutting wages. He estimated that between 6,000 and 8,000 men were out of work in Vancouver. The City Council had voted \$100,000 for relief work, and the Provincial Government had appropriated a like sum for public works. He said that unemployment was not at all serious in Alberta. The building trades were quiet in Edmonton and Calgary, but on the whole employment in that province was no worse than in previous winters. In Saskatchewan conditions were much the same as in Alberta. In Manitoba there was a good deal of unemployment particularly in Winnipeg, due largely to the cessation of operations in the lumber camps of

Northern Ontario and Manitoba. Mr. Hawkins stated that in the lumbering industry most firms were continuing logging operations on as large a scale as possible, but the prospects were not good. The future was uncertain and credit was hard to obtain. Some firms had already been obliged to cease operations for the year. It had been reported that some firms had reduced wages, but in some cases it was necessary to do so, or cease operations altogether.

Various resolutions on unemployment passed at the last session of the Employment Service Council were read and discussed. These appeared in the October issue of the LABOUR GAZETTE, on page 1356. The first resolution expressed approval of an agreement made between the Governments of Canada and of the United Kingdom with regard to immigrant labour and recommended that the agreement be made more effective by providing that labour could only be recruited from the United Kingdom for employment in Canada only under the supervision of the British Ministry of Labour. Mr. Robertson stated that the recent order-in-council raising the money qualification of immigrants was quite in keeping with this resolution. The second resolution approved the principles of restriction of overtime and reduction of hours of labour in slack periods, rather than reduction of permanent working forces. Mr. Robertson reported that the terms of this resolution had been brought to the attention of members of the Canadian Manufacturers' Association, and that in nearly every instance where it was necessary to curtail output manufacturers were reducing working hours before considering reductions in working forces. These resolutions were submitted to the Minister of Labour on December 28. The Minister's attention was drawn particularly to the recommendations in the resolutions with reference to: (1) making more effective the agreement between the Governments of Canada and the United Kingdom concerning the recruiting of labour; (2) approving the prin-

ciples of restriction of overtime and reduction of hours in slack periods, and (3) the adoption of a plan of unemployment insurance. With reference to the last recommendation the Minister stated that the question of unemployment insurance had been the subject of inquiry in the Department of Labour and a good deal of information had been collected which would be available for the next National Industrial Conference. A board for the investigation of unemployment insurance, which had been requested, had not been appointed in view of the fact that moneys were not available for it. With reference to the recommendation urging reservation of government work of a non-urgent character for periods of depression the Minister stated that something had already been done. A recommendation in favour of the establishment of advisory councils or committees in connection with the employment offices was approved by the Minister. It was pointed out that in the agreement between the Dominion and Provincial Governments under the Employment Offices Co-ordination Act, the Department of Labour had made it a condition that these councils should be established in cities of 25,000 population or over. With reference to the recommendation that commercial employment agencies be abolished, the Committee outlined the progress that had been made in their elimination and referred to the fact that some provinces hesitated to bring legislation for this purpose into effect because adjacent provinces were not likely to do so. With reference to establishing a special employment service for handicapped workers, the Minister expressed the view that special facilities for this class should be established in localities where the volume of work was such as to justify this step. He also expressed the same view with regard to the establishment of employment offices for teachers and other professional workers. A recommendation approving an extensive study of the harvest labour problem was discussed, and there was a general agreement that

such a step might lead to more satisfactory methods of supplying harvest labour demands. The other recommendations of the Council were formally presented without comment, not having any direct bearing on the problem of unemployment.

After the interview with the Minister of Labour the Committee discussed the details of the programme which they had submitted. The following statement suggesting the duties of Provincial Advisory Councils for submission to the provincial authorities was prepared:

1. To make recommendations to the Minister of the province with regard to general policy in such matters as the number and type of offices to be established, the location, premises and equipment of such offices, qualifications for positions in the provincial employment service, training of personnel, zoning of the province and publicity.

2. To advise on the organization of the provincial employment service including appointments of the persons in charge of local offices, changes in such appointments, and generally to promote efficiency in its administration.

3. To advise on the bringing into or sending out of the province by the provincial employment service any considerable body of labour.

4. To secure the co-operation of provincial organizations of employers and employees in the use of the employment Service.

5. To consider methods and devise plans for preventing and alleviating unemployment in the province and to enlist the co-operation of provincial organizations of employers, employees, the provincial authorities and other interested persons and organizations in the promotion of such plans.

The following suggested statement of duties for local Advisory Councils was also proposed:

1. To make recommendations with regard to location, premises, alterations, and equipment of the local employment office and with regard to the establishment of new divisions.

2. To advise on the organization of the local offices including appointments and changes in staff, the business hours, and in general to promote efficiency in its administration.

3. To advise on the bringing into or sending out of the locality by the local employment office of any considerable body of labour.

4. To secure the co-operation of employers and employees in the use of the local office, and to investigate complaints.

5. To recommend plans for advertising the work of the local office.

6. To appoint sub-committees for junior, handicap, and professional and business work and for such other matters as may be deemed advisable.

7. To consider methods and devise plans for the prevention and alleviation of unemployment in the locality, and to enlist the co-operation of employers and employees, the municipal authorities and other interested persons or organizations in the promotion of such plans.

A resolution was adopted that private employers and government departments, municipal, provincial and federal, be requested to spread available employment among the normal staff by short time rather than by releasing employees, and by the elimination of all overtime. A resolution was also carried that the various bodies represented urge the Ontario and Quebec Governments to abolish private employment agencies.

With regard to special sections of the employment service for handicapped workers and professional and business employees it was agreed that the Executive Committee should request the Minister to urge upon provincial governments the establishment of divisions for these classes in cities where the volume of business warranted such a step.

Discussions were held with officers of various departments of the Government with reference to special aspects of the problem of unemployment and measures for relieving the situation. The questions of immigration from Great Britain and employment on public works received especial consideration. A sub-committee of the Executive was authorized to take up with the Public Works and other Government Departments the matter of public works for the relief of the present unemployment. A resolution was passed that, when possible, disabled returned soldiers should be given preference in connection with vacancies in the Civil Service notified to the Employment Service by the Civil Service Commission.

TRADES AND LABOUR CONGRESS OF CANADA ON UNEMPLOYMENT

ON January 3 the Executive Council of the Trades and Labour Congress of Canada issued a circular to its affiliated unions on the unemployment situation. It is stated in the circular that whether the volume of unemployment is greater or not than in 1914 and preceding years the distress is more serious owing to the fact that wages generally have a lower purchasing power than in previous years and in most cases are completely absorbed in maintaining ordinary standards of living during periods of employment, causing distress in an ever increasing number of cases immediately employment ceases.

The unemployment problem is considered under three phases: (1) temporary relief; (2) provision of work to eliminate the present unemployment; (3) measures to cope effectually with future unemployment. With regard to the first, the policy of the Government as to relief measures as set forth by the Minister of Labour in the preceding article is outlined, and the members of the affiliated unions are asked to co-operate in the efficient carrying out of these measures.

With regard to the provision of work to eliminate the present unemployment, the Executive Council urge the members: (a) to impress upon all employers in their respective districts the absolute necessity of retaining as many workers as possible in their employment by a reduction of hours, and to make public the actions of employers who use this period of depression to lengthen the hours of work and decrease the wages accordingly; (b) in co-operation with other associations and societies to bring pressure to bear locally for the immediate commencement of sewers, public buildings and other municipal works; (c) to forward to their local member of the Provincial House and to

the Premier of the Province resolutions urging upon the Provincial Government to undertake road work, the clearing of bush land, construction of public buildings, etc.; (d) to take similar action with the Dominion Government. Stress was laid on the necessity of urging all public authorities to limit the hours of work on undertakings started to relieve unemployment to not more than eight per day.

The members of trade unions are also advised: (a) to register at the nearest employment office immediately they are out of work so that the actual state of unemployment might be known; (b) not to leave their home town for employment in another district unless a position really awaits them and unless they would not displace workers already there; (c) to press for the immediate formation of advisory councils to the employment offices as provided for in the Employment Offices Co-ordination Act.

With regard to measures for the prevention of future unemployment, the Executive Council announces that they will prepare recommendations to submit to the Dominion Government and other authorities. As the basis for future action the following suggestions are made: (a) Creation of a state employment insurance fund by assessments on industries similar to the methods adopted with provincial compensation funds, this to be administered under the authority of the Dominion Government. Payments from this fund to be made to those unemployed and those under-employed. Without entering into further details Provincial and Dominion Governments should contribute towards this fund at least the cost of its administration; (b) the completion of the machinery of Dominion, Provincial

and local Employment Councils on Employment and Unemployment; (c) the collection of statistics as to projected work and needed supplies by all public authorities in order that this might be carried out on the advice of

these councils when private enterprise fails to provide work; (d) alterations to the immigration and alien labour laws so as to prevent the flooding of Canada by workers induced to come here, often under misrepresentation.

THE TECHNICAL EDUCATION ACT IN OPERATION

THE enactment of the Technical Education Act by the Dominion Parliament in July, 1919, has given a decided impetus to educational work in all provinces and the next few years should witness a decided development. Every province has now made a good start, but it is realized that if Canada is to keep up in the commercial race the technical school accommodation must be increased in the next ten years at least to equality with the present high school accommodation. The following general outline of the main purposes of the Act will be of interest.

Purpose of the Act

"Technical Education," as defined in the Act, "means and includes any form of vocational technical or industrial education or instruction approved by agreement between the Minister of Labour and the Government of any province as being necessary or desirable to aid in promoting industry and the mechanical trades, and to increase the earning capacity, efficiency and productive power of those employed therein." According to this definition, technical education may include any form of education or training which will fit a boy or girl for useful employment in any chosen vocation. The chosen vocation may be in the field of manufacturing, engineering, commerce, trade, fisheries, agriculture, home-making, professions, etc. "Technical" and "industrial" are thus included in "vocational" education. The latter term, being the most comprehensive and the one generally used in the United States, will in

future be used to include all work to be promoted under the provisions of the Act.

While the above definition of technical education is very broad and comprehensive, it was clearly not intended that the Act should provide assistance for work already organized or established. Consequently the work to be promoted under the provisions of the Act has been limited to vocational education which has not been provided for except in a minor degree. The vocations for which education and training have been established are: (1) the professions (involving a degree), (2) teaching (elementary and high school), (3) agriculture—a federal grant has been given for this work. In accordance with the above, all work of college grade (courses leading to a degree), the training of nurses, the training of teachers for elementary and high schools, and agricultural education have been excluded from the benefits of the Act. The work of the elementary schools and the academic courses in high schools, including manual training, are excluded because they are not vocational, and secondly because they have been long established and provided for.

With the above noted classes of education work eliminated, the field for vocational training is fairly well defined.

Character of the Training

The Act does not provide for any specific kind of education or training. The character of the work is to be determined by federal-provincial agreement.

In view of the fact that the Act was fundamentally based on the recommendations of the Royal Commission appointed in 1910, the report of the Commission was looked to for guidance on this question. According to the recommendations of the Commission "the aims of industrial training and technical education" should be:—

1. The preservation of health and the vigour of life.
2. The formation of good habits.
3. The development of the sense of duty and responsibility.
4. The preparation of the body, mind and spirit for following some useful occupation.
5. The cultivation of the mental powers, the acquisition of knowledge and the development of the scientific spirit with reference to the occupation.
6. The promotion of goodwill, and desire and ability to co-operate with others.
7. The maintenance of standards and ideals.

There are those who would restrict the work of technical education to such instruction or training as would improve the efficiency of the boy or girl as a productive machine. The adoption of such a policy would create an army of slaves instead of an army of happy, industrious citizens. It has, therefore, been decided that the aims of vocational education in Canada shall, as far as possible, be those laid down by the Commission. On this basis the dominant purpose of any course of vocational education shall be to train for citizenship, the fitting for useful employment being regarded as the crowning element in the educational system. Before starting on a definite course of vocational training, the pupil should be aided and encouraged in finding his own aptitudes and in selecting a vocation for which his native ability is best suited. In accordance with the aims set forth above, emphasis should be placed on the development of character and ability to

co-operate with others. This involves the development in the individual of goodwill toward others, loyalty to the community, and a definite sense of responsibility for the maintenance and improvement of organized society.

Provisions of Federal-Provincial Agreements under the Act

The Act provides that each province taking advantage of its provisions must enter into an agreement with the Minister of Labour defining the conditions under which the Federal Government agrees to share dollar for dollar in the expense of promoting technical or vocational education. Agreements for the present year have been completed with all the provinces. The terms of the agreements differ only in minor details and embody the following provisions:—

1. Technical education is limited to vocational education or instruction which is supplementary to and distinct from the general educational system of the province. Vocational day classes are only for persons fourteen years of age and over and evening classes for those over fifteen.

2. Religious or privately owned schools do not benefit under the Act nor do agricultural schools for which a special grant is provided by the Dominion Government.

3. The only expenditures on vocational education which the Federal Government will share with the provinces are:—

- (a) Purchase of rental of lands, buildings, furnishings and equipment.

- (b) Travelling expenses and salaries of administrative staff and expenses incidental to administration.

- (c) Teachers' salaries and expenses of teacher-training.

4. Each province shall furnish the Minister with a monthly statement of the work done, and a half yearly financial statement showing the expenditures under the agreement.

5. The approval of the Minister is necessary before grants can be made in connection with the purchase or erection of buildings, extensions and equipment.
6. The Minister or his appointee has the right to inspect any work coming within the terms of the agreement and he

- may withhold payment of the grant if the work is not satisfactory.
7. The Province shall provide for adequate teacher-training, as soon as possible, and shall furnish such others officers as may be necessary to carry out the provisions of the Act.
8. Agreements are to be renewed each year dating from April first.

THE PROGRESS OF VOCATIONAL EDUCATION IN CANADA

THE extent of the progress that has already been made in vocational education in Canada up to June of last year, is indicated by the accompanying table showing the number of vocational schools, teachers and pupils, in each province.

The size of the schools is indicated by the fact that the average number of pupils for each is 436 and the average number of teachers 13. This gives an average of 33 pupils for each teacher, but must not be taken as indicating the size of the average class. Some of the

evening classes consisted of only three or four pupils, while others were so large that they were divided into two and three groups or sections attending on different evenings.

British Columbia and Alberta are the only provinces providing instruction by correspondence and these classes are confined to those engaged in mining. Nova Scotia formerly conducted correspondence courses for miners but these were discontinued during the war.

The facts that the evening schools outnumber the day schools by three to

VOCATIONAL SCHOOLS, TEACHERS AND PUPILS IN CANADA.

one and the attendance of the former is over six times that of the latter, seems to indicate that the demand is for classes for adults and those who have discontinued their education in order to take up remunerative employment; but when the fact is considered that only about ten per cent of the public school children enter high schools, the only conclusion to be arrived at is that there is an urgent need for more day schools to prevent this flooding of the labour market with unskilled juvenile workers who must take advantage of evening classes in order to complete their elementary education and qualify themselves for semi-skilled employment.

Recent Important Advances

Since June of last year further important advances have been made in the development of technical education in Canada, particularly in the provinces of Prince Edward Island and British Columbia. The scope of the work of the Toronto Technical School has also been extended and a system of vocational guidance for pupils of the public schools of Toronto has been inaugurated.

FIRST VOCATIONAL SCHOOL FOR PRINCE EDWARD ISLAND.

The opening on December 3 at Charlottetown, P. E. I., of the Provincial Agricultural and Technical School marked the inauguration of a new departure in the educational system of Prince Edward Island. The school was officially opened by His Honour Lieut.-Governor McKinnon. Principal Vernon Crockett occupied the chair, and short addresses were given by Premier Bell, Prof. L. W. Gill, Director of Technical Education for the Dominion, Hon. W. M. Lea, Commissioner of Agriculture, and Mr. R. H. Rogers, Chief Superintendent of Education for Prince Edward Island. This new school, recently organized by the province in conjunction with the Technical Education Branch of the Department of Labour, is primarily for the education of farmers' sons over

fourteen who have some inclination to remain on the farm, but is suitable for farmers of any age. The course covers two winter periods of twenty weeks each and has been formulated to reach the following objectives: (1) To give the largest amount of information and training in practical farming in the shortest possible time; (2) to train the farmer how to solve his own problems and increase his net returns; (3) to unfold to him the many opportunities on the farm and the possibilities of rural life; (4) to stimulate him for the filling of a more useful place in the social and economic life of the community. The subjects to be taken up are as follows:

Day Classes: Farm Animals, Crops and Fertilizers, Farm Machinery and Engineering, Commercial English, Dairying, Farm Management, Civics, Horticulture, Poultry, Commercial Arithmetic, Farm Economics, Woodworking and Blacksmithing.

Evening Classes: Motor Mechanics, Mechanical Drawing, Wireless Telegraphy, English and Arithmetic.

Already the school has a day enrolment of thirty and a total in the evening classes of sixty-two. The hours are from 8.30 a.m. till 4 p.m., and each evening from 7.30 till 9.30. The staff consists of the following qualified instructors: Principal and instructor in English, Arithmetic and commercial subjects, Vernon Crockett; Animal Husbandry, Wm. Reid, B.S.A.; Field Husbandry, A. F. Hansuld, B.S.A.; Dairying, F. T. Morrow, Farm carpenter and engineer; Motor Mechanics, Henry Whitlock; Wireless Telegraphy, Capt. K. S. Rogers.

Although the only existing course not directly connected with farming is Wireless Telegraphy, it is hoped that the school will develop into a general agricultural and technical institution, and ample provision has been made for expansion. The number of courses is limited only by the demand for training and the available funds for expansion. The school is located in the Rena

Maclean Hospital Building, and provision has been made for a dormitory system to accommodate seventy-five students. If the school continues to meet with the success it has enjoyed at the outset, it is felt that Prince Edward Island will soon have a Technical School which will compare very favourably with any in the Dominion.

FIRST TECHNICAL SCHOOL FOR BRITISH COLUMBIA.

New Westminster has the distinction of being the first city in British Columbia to establish a technical school devoted entirely to vocational education. The T. J. Trapp Technical School, which is in the building that was formerly the New Westminster jail, was officially opened by Mr. Trapp, the veteran chairman of the school board, on December 17, and some 200 students have already been enrolled.

The principal, Mr. L. Lambert, is supported by an efficient staff of teachers, and instruction is provided in such subjects as architecture, designing, chemistry, machine shop practice, steam fitting, electricity, commercial subjects, English, mathematics, civics, household science, cooking and sewing. The school is a thoroughly modern, up-to-date technical school and reflects great credit on those men whose courage and unselfish public service have made it possible. It stands on five acres of well cultivated land, providing accommodation for agricultural work and good playgrounds.

Although this is the first purely technical school to be opened in British Columbia, it is not the only one providing instruction in technical and industrial subjects. The King Edward High School of Vancouver provides a four-year technical course for boys and a three-year household science course for girls. Evening industrial classes have been established in Victoria, Vancouver, North and South Vancouver, Chilliwack, Nanaimo, Fernie, Ocean Falls and Coal Creek, and approximately 1,900 students were in attendance at the close of the past school year. Correspondence courses

provide instruction for those engaged in mining, and commercial schools established in eight separate centres have an average attendance of nearly 700 pupils. British Columbia has for some time been fully alive to the need for vocational training and the opening of the new school shows that she intends to keep up with the demand.

RECENT TORONTO APPOINTMENTS.

Mr. T. Bengough has recently been appointed director of vocational guidance for public schools in Toronto. His appointment is evidence of the fact that Ontario is awake to the necessity of improving the existing elementary educational system. Mr. Bengough was formerly on the staff of the Canadian Senate, and was also secretary of the Royal Commission on Industrial Training and Technical Education which spent over two years investigating and reporting on technical education in Canada, United States, Great Britain, France, Germany, Denmark and Switzerland.

The duties of the position as outlined by the Management Committee of the Board of Education are as follows:— (1) Collect and distribute information regarding available occupations and employments; (2) offer such counsel to the pupils of the Public schools as will enable them to plan intelligently for their vocational advancement and assist in placing them in occupations and employments; (3) secure and arrange for collections and exhibitions, illustrative of the occupations and employments open to pupils of the schools; (4) superintend trade talks and vocational visits; (5) keep the citizens informed of the objects and activities of the vocational department; (6) perform such other duties as may be assigned to him from time to time by the Board. The Director of Vocational Guidance is under the direction of the Management Committee. This appointment should do much to assist in administering the Adolescent Act by retaining the active interest of the pupils in school work and

by guiding all part-time students into the proper courses of study.

The addition of Mr. Frederick S. Challenger, one of Canada's most distinguished artists, and Mr. Alfred

Howells, one of the younger of the recognized English sculptors, to the staff of the Central Technical School at Toronto should add to that institution's reputation as one of the leading schools of its kind on the continent.

STATISTICS OF MANUFACTURING INDUSTRIES IN CANADA IN 1918

THE Dominion Bureau of Statistics has prepared a general review of the statistics of the manufacturing industries in the Dominion for the calendar year 1918, covering the operations of 35,797 establishments, located by provinces as follows: Ontario, 15,365, Quebec 10,540, Nova Scotia 2,125, British Columbia 1,786, Manitoba 1,444, Saskatchewan 1,422, New Brunswick

1,364, Alberta 1,252, Prince Edward Island 484, and the Yukon 15.

Principal Statistics of Industry

A table showing comparative statistics of industry for the years 1917 and 1918, and also the increases between the years mentioned, is given below:

Statistics	1918	1917	Increase over 1917
Capital investment.....	\$ 3,034,301,915	\$ 2,786,649,727	\$ 247,652,185
Employees on salaries.....	75,198	73,605	1,593
Salaries.....	107,462,484	94,992,246	12,470,238
Employees on wages.....	602,589	601,305	1,284
Wages.....	521,998,379	455,199,823	66,798,556
Cost of materials.....	1,900,252,314	1,605,730,640	294,521,674
Value of products.....	3,458,036,975	3,015,577,940	442,459,035

Employees, Salaries and Wages, 1918, by Provinces

salaries and on wages is presented below by provinces, in order of the amount of employment and wages paid:

The number of persons employed on

Provinces	Employees on Salaries		Employees on wages	
	Number	Salaries	Number	Wages
		\$		\$
Ontario.....	39,212	56,802,691	294,724	264,357,523
Quebec.....	20,835	29,667,542	186,678	146,132,433
British Columbia.....	4,588	6,902,901	39,451	43,519,262

Yukon.....	20	40,021	41	64,488

Statistics of thirty leading industries

The following table gives statistics of the thirty principal industries of the country for 1918, showing in each case the capital invested, the number of employees, the amount paid out in salaries and wages and the value of the products.

The capital invested in the thirty industries was 68.4 per cent of the total for the whole Dominion; employees, 62.3 per cent; salaries and wages, 65.5 per cent; and the value of products, 66.8 per cent. The industries are given in order of the number of employees engaged (which does not necessarily correspond with the wages paid):

Industries	Capital	Em- ployees	Salaries and Wages	Value of Products
	\$	No.	\$	\$
Lumber, lath and shingles.....	182,254,740	60,868	49,786,122	146,333,192

THE PULP AND PAPER INDUSTRY IN CANADA DURING 1918

Report of the Dominion Bureau of Statistics, with preliminary figures for 1919

THE Dominion Bureau of Statistics has issued a report on the pulp and paper industry in Canada during 1918. The report was prepared in collaboration with the Dominion Forestry Branch, the Department of Crown Lands of Nova Scotia, the Department of Lands and Mines of New Brunswick, the Department of Lands and Forests of Quebec and the Department of Lands of British Columbia. In addition to various other statistics relating to the industry the report gives by provinces the number of workers employed, the hours of labour, and the rates of wages paid in pulp mills, pulp and paper mills, and paper mills during 1918, with comparative figures for 1917.

The report shows a continued growth in the industry, the number of mills in operation having increased from 83 in 1917 to 94 in 1918 with an increase in the volume of production from \$96,340,327 to \$119,309,434. Salaries and wages rose from \$20,358,019 in 1917 to \$26,974,225 in the following year, an increase of 32.5 per cent, and the average number of salaried employees and wage earners increased from 22,075 to 24,712 or 12.62 per cent.

The total capital invested in the industry including land, buildings, machinery, stocks on hand and working capital amounted to \$241,344,704 as compared with \$186,787,407 in 1917. From these figures it will be seen that the salaries and wages paid amounted to about 11 per cent of the capital invested and nearly 23 per cent of the value produced.

Comparison of Weekly Wages

Of the 21,699 employees on wages in 1917, the number receiving less than \$10 per week was 1,546, or 7.1 per cent of the total, whereas in 1918 the number receiving less than \$10 per week was

1,173 or 5 per cent. Those receiving \$10 but less than \$15 per week numbered 6,999 in 1917, or 32.2 per cent, as compared with 3,062 in 1918, or 13.1 per cent. In the class receiving \$15 per week but less than \$20 the number was 8,130 in 1917, or 37.5 per cent as against 7,499 in 1918, or 32.2 per cent. In the class receiving \$20 but less than \$25 per week the number was 3,119 in 1917, or 14.4 per cent, as against 6,318 in 1918, or 27.1 per cent. In the class receiving more than \$25 per week the number in 1917 was 1,905 or 8.8 per cent, as against 5,259 in 1918, or 22.6 per cent. The following table indicates the number of wage earners in all the mills classified according to their weekly wages during 1918, with a comparative table for 1917.

COMPARATIVE TABLE OF CLASSIFIED WEEKLY WAGES

	1918				1917			
	Male	Female	Under 10 years	Total	Male	Female	Under 10 years	Total
Under \$4.....	5	4	24	33	38	8	2	48
\$4 but under \$5.	3	16	17	36	24	17	9	50
\$5 but under \$6.	3	5	26	34	44	84	13	141
\$6 but under \$7.	39	65	29	133	72	141	27	240
\$7 but under \$8.	87	87	50	224	114	112	19	245
\$8 but under \$9.	122	210	29	361	122	95	3	220
\$9 but under \$10.	216	111	25	352	477	108	17	602
\$10 but under \$12.	371	148	23	542	1,331	50	9	1,390
\$12 but under \$15.	2,402	102	16	2,520	5,595	14	...	5,609
\$15 but under \$20.	7,420	22	57	7,499	8,117	6	7	8,130
\$20 but under \$25.	6,308	9	1	6,318	3,119	3,119
\$25 and over.....	5,258	1	...	5,259	1,904	1	...	1,905
Totals.....	22,234	780	297	23,311	20,957	636	106	21,699

The average weekly wages of all employees irrespective of age or sex was \$1,576 in 1917 and \$1,920 in 1918, or an average increase of 21.83 per cent.

Employment

The following table gives by months employment in the different classes of mills. The greatest amount of employment was in the combined pulp and paper

mills, which averaged for the year 61.8 per cent of the total employment in the industry.

EMPLOYMENT BY MONTHS FOR CLASSES OF MILLS.

	Pulp Mills.		Pulp and Paper Mills		Paper Mills		All Mills	
	Male	Female	Male	Female	Male	Female	Male	Female
January.....	6,000	27	14,811	302	1,497	454	22,407	783
February.....	6,307	27	14,674	281	1,509	461	22,490	769
March.....	6,272	29	14,469	307	1,555	484	22,296	820
April.....	6,413	27	13,800	327	1,536	490	21,749	844
May.....	6,821	36	14,819	319	1,578	493	23,218	848
June.....	7,131	41	14,990	335	1,596	501	23,717	877
July.....	7,643	35	14,983	345	1,682	502	24,313	883

November.....	7,024	36	14,171	331	1,660	480	22,855	847
December.....	6,656	39	14,221	330	1,740	516	22,617	885
Average for the year.....	6,790	34	14,444	326	1,611	492	23,086	807

Average Working Time

The following table shows the average working time per year, per week and per shift, for each class of mills for all Canada. It will be seen that the combined pulp and paper mills operated the greatest number of days in the year, namely, 290.8. The hours both per week and per shift were greatest in pulpmills.

AVERAGE WORKING TIME BY CLASSES OF MILLS

	Pulp Mills	Pulp and Paper Mills	Paper Mills	All Mills
Days on full time.....	245.7	290.8	257.5	264.7
Days on $\frac{3}{4}$ time.....	8.6	2	2	4.2
Days on $\frac{1}{2}$ time.....	3.2	2.1	0.7	4
Days on less than $\frac{1}{2}$ time...	1.6	.36
Days idle.....	44.9	8.8	37.8	30.5
Hours worked per shift.....	11.2	9.3	9.8	10.1
Hours worked per week.....	70.3	55.3	63.2	62.9

Preliminary Report on the Pulp and Paper Industry of Canada during 1919

The Dominion Bureau of Statistics has issued a preliminary report on the pulp and paper industry of Canada in 1919. The report covers 99 plants representing a total capital of \$264,581,300. The amount paid in salaries and wages for the year totalled \$32,323,789 distributed among 25,491 male and 1,274 female employees. The largest number of employees were in combined pulp and paper mills, which had 15,335 male and 555 female workers. In pulp mills there were 7,853 male and 94 female employees, and in paper mills 2,303 male and 625 female employees. The value of wood pulp produced during the year was estimated at \$48,562,088, and of paper \$91,362,913.

MINING OPERATIONS IN ONTARIO IN 1919

THE 29th annual report of the Ontario Department of Mines for the year 1919 records a decline of 26.7 per cent in the mineral production of the Province from that of the previous year, the aggregate value of all mines and quarries, metallic and non-metallic, being \$58,883,916, as compared with \$80,308,972 in 1918. This decline was due to the cessation of the abnormal demand during

the war period for certain products required for military purposes, such as nickel, copper and iron pyrites, the production of these minerals being further stimulated by the high level of prices obtained during the war.

The report tabulates for each metallic and non-metallic mineral the quantity produced during the year, the value of the products, the number of

employees and the amount of wages paid. The following is a summary of these statistics.

Products.	Quantity	Em- ploy- ees	Wages
Metallic.			
Gold.....oz.	505,964	2,188	\$ 3,050,221
Silver....."	11,363,252	2,121	2,876,660

Other products..	2,409	3,489,764
Total metallic.	9,254	12,798,799
Non-metallic.			
Clay products, (brick and tiles).....	1,904	1,405,132
Cement, Port- land, bbls....	2,022,575	647	722,029
Natural gas, M. cu. ft.....	11,085,819	506	444,678
Petroleum, crude imp. gal....	7,703,515	1,580	2,045,072
Stone, building, granite, etc....	688	556,162
Other products..	2,674	2,506,963
Total non-met- allic.....	7,974	7,680,036
Grand total....	17,228	20,478,845

In gold production Ontario led the other provinces with 66 per cent of the total amount produced in Canada, and only California among the American States exceeded the output of the Province during the year. This record was established in spite of the fact that the

industry was hampered by a shortage of labour, industrial disputes, and other causes. A great impetus was given to silver mining in Cobalt and Gowganda by the high prices which ruled throughout the year, the average New York price being 111.122 cents per fine ounce. High prices permitted the mining of low grade ore, led to the reopening of abandoned slopes, and made profitable the re-treatment of dumps having a low silver content. The production of nickel and copper, greatly curtailed on the close of the war, showed a marked revival before the end of the year. The quantity of iron ore marketed in 1919 fell a little short of the level of 1918; a large proportion of the mine shipments going to the blast furnaces at Sault Ste. Marie. Pig iron also showed a decline from the previous year's level; ten blast furnaces were in operation during the year, but only one of them was worked steadily, the remainder having slack periods, or occasionally shutting down. With the exception of 54,000 pounds of lead recovered from the Ontario silver and gold ores refined in the United States, the entire output of lead came from the mine at Galetta on the Ottawa River. The output of clay products was valued at \$3,776,562 as compared with \$2,018,450 in 1918 and \$4,105,597 in 1914. Labour and fuel scarcity are stated to have kept down production while builders refrained from large scale house construction owing to high costs and unsettled labour conditions.

An account of the mining accidents mentioned in this Report appeared in the LABOUR GAZETTE for May, 1920, on page 617.

EFFECTS OF THE BRITISH COAL STRIKE ON EMPLOYMENT IN OTHER INDUSTRIES

THE effects of the recent strike of British mine workers upon employment in other industries have been estimated by means of records collected by the Employment Exchanges in Great Britain under direction of the Ministry of Labour. It is explained, however, in

an article in the *British Labour Gazette*, that these records are not to be taken as an exact measure of the effects of the coal strike on employment, since there was already a considerable amount of unemployment due to slackness in various trades, particularly in the cotton,

lace, hosiery and clothing trades, while some unemployment also resulted from other strikes, shortage of materials, and other causes. Again, the returns obtained relate only to plants which came under the observation of the Exchanges. The coal miners' strike began on October 18, and the numbers unemployed on subsequent selected days were as follows:—

	Discharged owing to entire closing of plants.	Suspended owing to reductions in staffs.	On short time.
October 19.....	29,000	82,000	Large number.
October 26.....	82,000	128,000	250,000
November 3.....	95,000	148,000	348,000

The industries mainly affected by the coal strike were iron and steel manufacture; engineering and shipbuilding; textiles (of short time workers nearly one half were in the latter industry); tin mining; potteries; dock labour (especially coal trimmers, coal tippers and coal porters); seamen, and the fishing industry. The working of short time was to some extent a voluntary measure on the part of employers, who took this means of alleviating the hardships caused by the strike either on the

suggestion of the Government and of certain of the Employers' Associations, or else as the result of orders by the Board of Trade limiting the quantity of coal, gas and electricity consumed in factories (with certain exceptions) to 50 per cent of the average quantities consumed. The position of railway workers was exceptional. Freight traffic was reduced and passenger services were drastically curtailed, thus reducing the amount of employment available; but the "guaranteed week" was maintained and earnings were thus not greatly affected by these reductions.

The figures of unemployment given in the foregoing table probably fall far short of the total number of persons out of work in consequence of the strike, which is estimated by the British *Labour Gazette* at not less than 350,000 and probably many more, since the percentage unemployed among members of trade unions (mainly of skilled workmen) excluding coal miners, rose from 2.5 per cent at the beginning of October to 5.3 per cent at the beginning of November. The extent of the increase in the number of persons working on short time is shown from the statement that while the number of workpeople employed in certain industries decreased in the period of the strike by 4.6 per cent, the total wages paid in the industries showed a decline in the same period of 20.4 per cent.

APPRENTICESHIP IN THE BUILDING TRADES IN GREAT BRITAIN

Scheme of Adult Apprenticeship for Increasing Present Supply of Labour

DURING the months of August, September and October last, negotiations were proceeding between the British Government and the Resettlement Committee of the Industrial Council for the Building Industry for the purpose of increasing the supply of labour for housing schemes and for maintaining an increasing output on these schemes. The proposals discussed

in these negotiations as reported in the British *Labour Gazette*, included changes in the apprenticeship system with a view to admission to the trades of ex-service men. The final scheme proposed by the Government was adopted by the Resettlement Committee on September 3, and on October 20 the Committee approved a draft letter to be sent to the constituent bodies of the Council re-

commending that in return for the Government's concessions regarding time loss on housing work owing to stress of weather, the employers and operatives should support the scheme for adult apprenticeship. The scheme provides that in every section of the building industry firms may accept as apprentices suitable young men, including labourers, between the ages of 19 and 26 years. In places where the industry is sufficiently organized, all applications shall be referred to, and approved by, a small Joint Committee of employers and operatives which shall be set up in such places for this purpose. The intending apprentice will first serve a probationary period of three months without indenture at the same rate of wages as for the first six months of indentured apprenticeship. Following on the probation, there shall be an indentured period of service, to the particular trade, of (a) three years for men apprentices who enter between the ages of 23 and 26, and (b) four years for those entering between the ages of 19 and 23. All ex-service men will, however, be admitted to the elder category, and will serve a three-year period.

The scheme provides a scale of minimum wages to be paid for each six months' period of apprenticeship. Those adult apprentices who are serving a three year term will receive 50 per cent of the district rate, applicable to journeymen of the particular trade, for the first period of six months, 55 per cent for the second period, 60 per cent for the third period, 70 per cent for the fourth period, 80 per cent for the fifth period, and 90 per cent for the last period. Those apprentices serving a four-year term will receive 33 1-3 per cent for their first period and 40 per cent for their second six months period. Thereafter they will receive an additional 10 per cent in each successive period except in the seventh and last periods, when they receive 85 per cent, and 90 per cent, respectively, of the district journeymen's rate applicable.

The wages received by the adult apprentices shall be subject to review by the foreman under whose supervision the

adult apprentice is working, and shall be raised when in the foreman's judgment the skill and ability of the apprentice so deserve; provided that such increase shall not be made at intervals of less than four months, and that the men apprentices shall not attain the full journeymen's rate except during the last six months of indenture. The necessary tools shall be provided by the employer at the commencement of the term of apprenticeship, and shall be paid for by the apprentice during the last 12 months of his indenture by weekly instalments to be deducted from his wages. The local Joint Committee shall arrange for periodical trade tests, and at such tests may decide whether the rate of wages should be increased beyond the schedule rate, the eligibility of the apprentices for membership of the operatives' unions, and whether the employers have fulfilled their undertaking that these apprentices should obtain proper variety in their training.

The operatives in all trades shall definitely co-operate and assist in the teaching of apprentices under this scheme in order that they may speedily become efficient. The duties of employers in relation to this scheme are that all employers should offer to employ some adult apprentices, that they should give them proper variety in training, and should pay the fees of any evening classes at approved technical schools, attendance at which the local Joint Committee may deem a necessary condition of indenture.

The maximum number of apprentices who may enter the industry under this scheme shall be the number of suitable and approved candidates offering for each trade, provided that the total number of apprentices taken under the scheme for any one trade by an employer, together with any boy apprentice he may have in the same trade, shall not exceed the total number of apprentices allowed for that trade under any existing regulations governing the number of apprentices. In those trades where no such regulations exist, the admission

of apprentices under the scheme shall be subject as to numbers to an agreement being entered into between the employers and the executive of the Trade Union concerned.

The above scheme shall continue in operation until December 21, 1923, and

provision is made for its review and renewal, if advisable, by the Industrial Council. Intending apprentices over the age of 22 will be accepted under the scheme only until December 31, 1921, and others must enter before December 31, 1922.

ARBITRATION IN BUILDING TRADES DISPUTES IN THE UNITED STATES

Work of National Board for Jurisdictional Awards

THE work of the National Board for Jurisdictional Awards in the Building Industry in the United States is the subject of an article by W. C. Roberts in *The National Civic Federation Review* (New York). This organization was formed over a year ago after twelve years of effort, mainly by the Building Trades Department of the American Federation of Labour, represented by its secretary Wm. J. Spencer, and is now beginning to show results in more peaceful conditions in the industry. The need for a better understanding in matters of jurisdiction is evident from the fact, stated by John Donlin, president of the Building Trades Department, that 95 per cent of the strikes in the building industry have hitherto been caused by the mutual encroachment of the various trades. The new means for arbitrating disputes arising in these twilight zones between trades was approved both by the workers through their unions and by the contractors, architects and engineers through their associations, and was further encouraged by the Federal Department of Labour.

The preamble to the constitution of the board refers to the new era of arbitration and conciliation on the close of the war and proceeds: "The Building Industry recognizes the equity of this principle and agrees to unite its efforts for the purpose of adjusting, in a conciliatory and co-operative spirit,

such differences of opinion as now exist or may arise in the future. The immediate object is to settle disputes as to jurisdiction over work that is claimed by more than one building trade."

The National Board consists of eight members, three of whom are chosen by the Building Trades Department, two by the Associated General Contractors of America, and one each by the American Institute of Architects, the Engineering Council, and the National Association of Building Trades Employers. Its duties are to hear claims for jurisdiction over work performed by building trades and to determine by which trade the work in contention shall be performed; at least a two-thirds majority of the voting members of the full Board is required to render an award in all cases. Should the Board fail to reach an agreement an umpire may be agreed upon whose findings shall be final, and if the Board should be unable by a two-thirds majority to agree upon an umpire, the Secretary of the United States Department of Labour shall be called upon to name an umpire. Each signatory to the agreement undertakes that the members of his organization shall not take part in sympathetic strikes in any case of jurisdictional dispute. The labour organizations included in the agreement likewise undertake to secure the compliance of their members with the awards of the Board on pain of suspension from their International or-

ganization. A similar penalty is attached to the failure of architects, engineers or employers in respect of their respective organizations. The Board further recommends that in order to avoid jurisdictional strife, new materials, specialties and methods of application be passed upon by the Board before being specified or used, provided six members of the Board agree that the subject has not been previously covered. No member representing the Building Trades Department may vote on an award in a dispute in which his own craft is involved.

Commenting upon the establishment of the Board, W. C. Roberts says: "The fact that the union officials were the first to advocate the elimination of these

disputes by conciliation and arbitration proves conclusively that whatever improvements in industrial conditions the country may enjoy must originate in and be fought for by organized labour. The contractors, architects and engineers are forced to follow."

The members of the National Board are E. J. Russell, chairman, American Institute of Architects; R. P. Miller, Engineering Council; Col. J. R. Wiggins and F. J. C. Dresser, Associated General Contractors of America; E. M. Craig, National Association of Building Trades Employers; Wm. Dobson, W. L. Hucheson and J. J. Hynes, Building Trades Department, American Federation of Labour; Wm. J. Spencer, secretary.

SOVIET PROPAGANDA

"Ambassador" Martens deported from the United States.—Lenine and the World Revolution

IN the pamphlet issued by the Department of Labour in August, 1920, entitled "Information Respecting the Russian Soviet System and its Propaganda in North America", reference was made to the report of the inquiry of the Committee of the United States Senate which had been charged with the task of investigating the activities in the United States of one Ludwig C. A. K. Martens, the so-called "Ambassador" of Soviet Russia to the United States, and some extracts from the Committee's report were included in the departmental pamphlet. It will be of interest to note the further developments with respect to the official attitude of the United States Government to Mr. Martens. The deportation of Mr. Martens having been ordered by Mr. W. B. Wilson, Secretary for Labour in President Wilson's Cabinet, a letter was received by Secretary Wilson from Mr. Charles Retch, counsel for Mr. Martens, protesting against deportation. Secre-

tary Wilson's reply is of special interest as an expression of the deportation policy of the Department of Labour of the United States. The text of the letter is as follows:

I am in receipt of your letter of December 26, 1920, relative to the return of Mr. Martens to Russia. I have authorized Mr. Hampton, acting Commissioner-General of Immigration, to complete the arrangements for the departure of Mr. Martens and the other persons he desires to go with him.

I am glad to know that some one in Russia has at last awakened to realization of the friendship that has existed between the American people and the Russian people. So far as the American Government and the American people are concerned, that friendship for the Russian people still continues.

In dealing with the question of deportation of aliens, the Department of Labor is not concerned with the form of government adopted by or imposed upon the people of Russia, except in so far as our sympathies go out to those who are oppressed. In the evidence presented to me in the Martens case, it was clearly shown that a group of men calling themselves Communists had

set up a military dictatorship in Russia; that they had camouflaged it under the name of a dictatorship of the proletariat, seeking to convey the impression that it was a dictatorship by the proletariat; that it had by force of arms introduced compulsory labor, in other words, slavery, into Russia; that the proletariat were compelled to work at occupations selected for them at meager wages and long hours imposed under the direction of the military masters. Naturally the sympathy of the Administration and of the American people, including the workers goes out to the Russian people under such circumstances, just as our sympathies go out to the oppressed of all lands, no matter who or what the oppressor may be.

REAL CAUSE OF COMPLAINT

But these things did not bring Mr. Martens within the jurisdiction of the Department of Labor. The evidence was cumulative and conclusive that the military dictatorship of Russia calling itself the Soviet Government, was appropriating large sums of money to stir up insurrection by force of arms against the United States Government. It is a novel principle in international law and one that is not likely to be generally accepted that a newly established military dictatorship in one country may capitalize the traditional friendship of another country for its people by making a pretense of wanting to establish friendly relations with the government at the same time that it is seeking to destroy it by stirring up insurrection. As long as that attitude is maintained by any group in Russia, whether it temporarily dominates that country by force of arms or not, members of its organization residents in, but alien to, the United States will be subject to the deportation laws administered by the Department of Labour.

Our government is a peoples' government. Its basic law can be changed whenever the people desire it to be changed, by peaceful parliamentary processes. It can be made as radical as anyone may desire, whenever a sufficient number of our people are convinced that radicalism is the kind of government we need, and by the same process it can respond to the needs of conservatism. Yet this is the government that the Soviet group in Russia seek to overthrow through the fighting force of an aggressive minority which they hope to pit against a passive majority.

INTERFERENCE RESENTED

I have taken pains on various occasions to point out that there is nothing in our immigration law that requires the deportation of any alien because he believes in, teaches or advocates Socialism, Communism, Syndicalism, a Soviet form of government, a dictatorship of the proletariat, abolition of property rights, or any other change in our political or social structure, provided he seeks to bring about the change by the parliamentary process of convincing the people that his political and economic philosophy is right. But, having established a government

with universal suffrage, and consequently the most perfect democracy on earth, we will not permit a military despotism in Russia, re-imposed upon a people but recently relieved from bondage, to stir up insurrection among our alien residents to whom we have extended hospitality and opened the doors of hope, even though their efforts in that direction are so futile that they cause us but slight annoyance.

The insulting intimation that profitable trade with Russia is so important in the American mind that we would permit our own institutions to be undermined and destroyed and our liberties submerged if we can but have access to that trade, only reflects the brutal materialistic conceptions of the dominant group in Russia. We have given several illustrations to the world, among them our entrance into the recent war, that while we love comfort we hate oppression and have a passion for human liberty.

For these reasons Congress has directed that every alien who is a member of an organization that proposes to use force to overthrow the United States shall be expelled. The traditional friendship between the American and Russian peoples will continue, and when a government exists in Russia that seeks to work out Russian destiny in the Russian way, and leaves us to work out our destiny in our way, there will be no desire on the part of the American Government to deport its officers and members as such.

The Soviet Premier's Latest Declaration

The step taken by the United States Government with respect to the Soviet "Ambassador" takes on additional importance in view of the declaration of policy on the part of the Soviet Government as appearing in the official Bolshevik "Krasnaia Gazetta" (Red Gazette) of November 23, 1920, and as contained in a speech stated to have been delivered by Lenine at the Moscow Convention of the Communist Party. The extract is reprinted from the Bulletin of the Russian Information Bureau in the United States. The text of Lenine's speech is as follows:

After splendid victories in the summer, coming after tremendous defeats, after the preliminary peace with Poland which enabled us to make short work of Wrangel, the imperialistic papers have begun to state definitely that Poland has made peace against the wishes of France. The plan of the Powers who insisted upon the continuation of the War has collapsed. We have obtained a breathing spell that is more substantial than any during the past three years. The world revolution, by whose aid alone we can win, does not mature at the speed which we hoped for in the beginning.

We are fighting for such conditions as would give us the possibility and strength to await the arrival of the revolution. The bourgeois countries have emerged from the War as bourgeois countries. They have succeeded in averting the revolutionary storm. Still, after a period of three years, the Imperialists are compelled to give up their struggle against Russia which has, in comparison with their own military resources, practically none.

For three years their armies were attacking us in Archangel, Odessa, and the Crimea, but these armies became demoralized. A new campaign against us is possible. But we have obtained not merely a breathing spell, but the possibility of existing amidst bourgeois countries. This means that the revolution has already matured within those countries. If there exists now a country that has been able to fight the Imperialists for three years, even though it be in a Bolshevik manner, then such a country is inevitably an international factor.

Our granting of concessions to the American millionaires will serve to make relations between Japan and America more strained. There is already talk in Japan that Russia is driving it to war with America. We shall utilize their conflict for our own interests. By signing concession agreements with the bourgeoisie, we gain a moral as well as material victory. Our foes, burning with desire to crush us by armed force, are now compelled to conclude agreements with us, and to contribute to our consolidation and strengthening. To condemn us for signing the concessions would be right only if we were able

to overthrow capitalism throughout the world with the effort of one country.

In the Caucasus conditions are arising which might force us into war. But that peril is insignificant to us. It may be that we will end it in peace, but if it is to be war, it will be at a distant border and with an overwhelming balance of power in our favour.

(Speaking of the economic situation, Lenin dwelt upon the isolation of the central authority from the life of the country, but emphasized that there was nevertheless some improvement noticeable.)

We have overthrown the bourgeoisie, we have won the power, and we have been able to maintain it, but that is still little. We must obtain the possibility of ruling the country and its economic life. We must show an example of constructive work, demonstrating that the proletariat is a real power, capable not only of defending itself, but also building. If we won't be able to do that, no military successes can save us, and we shall suffer relapse.

We must show the peasantry that the new order is more advantageous for it. For the establishment of order, a single plan is indispensable, and that requires the creation of some technical preliminary conditions.

Technical experience shows that one such condition is—electrification. This will require a complete revolution of our economic life, with a tremendous expenditure of effort. We say: "Communism, Soviet Rule, Electrification!"

THE JOINT MARITIME COMMISSION, INTERNATIONAL LABOUR ORGANIZATION

IN conformity with a decision of the Governing Body of the International Labour Office of the League of Nations, five shipowners and five seamen were appointed to a Joint Maritime Commission by the International Seamen's Conference which met at Genoa in June last. The Commission was completed subsequently by the Governing Body which appointed two of its members to act on it. The members of the Commission were Mr. Deckers (Belgium), Mr. Hori (Japan), Mr. Cuthbert Lewis (Great Britain), Mr. Nordborg (Sweden), and Mr. Robb (Canada) representing the shipowners; Mr. Doring (Germany), Captain Guiliotti (Italy), Mr. Nilson (Norway), Mr. Rivelli (France), and Mr. Havelock

Wilson (Great Britain), representing the seamen, and Mr. Robert Pirot, French representative of the employers, and Mr. Oudegeest, Dutch representative of the workers, members of the Governing Body.

The first meeting of the Joint Maritime Commission was held at Geneva on November 8, with Mr. Arthur Fontaine (France) as Chairman. The Agenda submitted for discussion comprised the following items: (1) The constitution of the Commission; (2) the Report of the Director of the International Labour Office; (3) questions bearing upon the establishment of an international maritime code, and (4) various decisions of the Genoa Confer-

ence requiring action by the Joint Maritime Commission.

At the opening session the Chairman reminded the Commission that it was in some sort a consultative Committee to which the International Labour Office would appeal when considering technical maritime questions.

The Commission instructed the International Labour Office to enquire as to how the recommendations regarding the regulation of the hours of work could be applied to the fishing industry; to approach the International Waterways Commission of the United States and Canada with regard to the application of the recommendation relating to inland navigation; to prepare detailed information on the application of the eight-hour day law in the Marine Service in France.

The Director's Report contained a full account of the work which had already been undertaken by the International Labour Office with a view to the establishment of an International Seamen's Code. In his report the Director of the International Labour Office gave the following list of general subjects which might be covered by the Office in its work on the Code.

1. Facilities for finding employment for seamen.
2. Articles of agreement and their control by public authorities.
3. The obligations of the seamen to the shipowners, and the regulation of work on board ship. (Hours of work, weekly rest, etc.).
4. Wages, their mode of payment, suspensions and retentions of wages, seizures and assignment.
5. The feeding and accommodation of seamen on board ship, and generally measures concerning the health of seamen.
6. Rules relating to safety on board ship.
7. Sickness and injuries to seamen.
8. Repatriation of seamen discharged in foreign ports.
9. The conditions of expiration of articles of agreement, and particularly the right of the seaman to terminate his agreement in certain ports and under certain conditions.
10. The rules relating to conciliation and where necessary, judgments on individual disputes arising between a shipowner or master and a seaman. (Rules as to the competence of tribunals and rules of procedure).

11. Fixing of a minimum age for admission to maritime work.

11a. Fixing of a minimum age for admission of workers to the engine room.

12. Composition of effectives on board ship, and regulation of the employment of foreign labour on board ship.

13. Insurance of seamen against incapacity or sickness, old age insurance or retiring pensions, insurance against unemployment through shipwreck or for other causes.

14. The service of inspection of maritime work, charged with the control of the application of conventions, laws and regulations relating to the hygiene and safety of maritime work.

15. Discipline on board ship.

16. Rules relating to the solution by means of conciliation and arbitration of collective disputes as to maritime work; establishment of regulations with regard to wages, with uniform determination in all countries of the considerations to be taken into account in the establishment of these regulations.

17. The granting of international reciprocity as regards seamen, especially in the matter of the remitting of wages due to foreign seamen; the evolution of the estates of seamen deceased in foreign countries or on board foreign vessels; assistance to seamen in case of sickness, injury, shipwreck, etc.

The preparatory work for the elaboration of an International Seamen's Code was outlined as follows:

1. Collection of materials, information and documents; classification and digesting of materials assembled, and constant completion of them; distribution of results among Governments and people interested; correspondence with Governments and with organizations of shipowners and seamen.
2. Study and use of materials collected and classified under (1); preparation of questionnaires for distribution to Governments and organizations of shipowners and seamen; preparation of drafts and proposals for the International Code.
3. Criticism of drafts by competent legal experts, representing points of view of various countries and various interests.
4. More general criticisms and checking of work of legal experts by non-legal representatives of interests affected.
5. Communications to Ministries of various Governments for opinions of Government officials.
6. Final consideration of proposed drafts of an International Code.

The Commission took action upon this Report as follows:

1. It approved the general method of procedure proposed therein for the elaboration of the International Seamen's Code.

2. It asked the International Labour Office to ascertain from the Governments the measures taken or contemplated by them, for the establishment of national codes required by the Genoa Conference.

3. It further instructed the Office to send to the Governments and also to the national owners' and seamen's organizations, for their observations, a memorandum on the methods adopted for the construction of an international code.

4. It proposed that as a preliminary measure the drafting of an international code of seamen's articles of agreement should be taken in hand.

With regard to unemployment insurance for seamen the Commission decided

that the consideration of this question should be postponed for the next session, in the course of which a report should be submitted on the operation of the scheme in Great Britain and on similar measures taken in other countries.

The Commission instructed the International Labour Office to institute an inquiry among doctors who had specialized in questions regarding the health of seamen, and to approach the Governments and shipowners, with a view to securing the introduction of effective measures and in particular the establishment of institutions to provide seamen with healthy recreation in ports. The Office was further instructed to make inquiries into seamen's technical education, and it was felt that this question could not be considered apart from seamen's recreation. It was proposed to hold a conference of representatives of shipowners and seamen in the third week of January to consider the question of regulation of hours of work on board ship.

CONGRESS OF INTERNATIONAL FEDERATION OF TRADE UNIONS

THE International Federation of Trade Unions met in London, England, on November 22-27, with about one hundred delegates, representing over twenty-four million organized workers in attendance. The delegates came from Austria, Belgium, Canada, Czechoslovakia, Denmark, France, Germany, Great Britain, Holland, Hungary, Italy, Luxemburg, Norway, Peru, Poland, Spain, Sweden and Switzerland. Fraternal delegates and the secretariats of 17 International Trade Union Federations were also present. The Canadian delegate was Mr. J. H. Halford, representing the Trades and Labour Congress of Canada. The British delegates present were Messrs. J. H. Thomas, Harry Gosling, W. B. Swales, E. L. Pulton, R. B. Walker and Miss Margaret Bondfield (representing the Parliamentary Committee of the Trades Union Congress), and Messrs. Alfred

Short, T. Mallalieu and J. Cross (General Federation of Trade Unions)

Vice-president Jouhaux, in his opening address welcomed the congress as a proof of international solidarity in spite of the reaction that surrounded them everywhere. International fraternity could only be realized, he claimed, by the breaking down of the capitalist system and by the socialization of the means of production and distribution. Mr. J. H. Thomas, who was unanimously elected president in succession to Mr. W. A. Appleton, who resigned from that position, referred to the attacks upon their federation by the Russian communist leaders. "We are looked upon as 'Yellow Trade Unionists'," he said, "but we desire a world free, we want liberty and justice for our class, not by a bloody upheaval, but by the

scientific application of our minds to those problems."

Mr. Edo Fimmen, secretary of the Federation, stated no official intimation had been received from the American Federation of Labour as to whether they would be represented at the conference; but that the relations between the American Federation and the International Federation had become strained since the conference at Amsterdam.

A resolution was passed by 21,906,000 to 2,710,000 votes that "the trade union movement should resort to general withdrawal of labour and to international boycott as a stern and effectual weapon in the fight against reaction and for progress." The resolution made an appeal for co-operation "to impress on the working classes the necessity for international mass action in the assault on reaction, in declaring war against war, and for the realization of a new social system."

The minority against the adoption of the foregoing resolution was composed of the delegates from Canada, Italy and Sweden. Mr. Halford, the Canadian delegate, pointed out that the Trades and Labour Congress of Canada existed as a body concerned only with the industrial welfare of its constituents. On the other hand the International Federation appeared to him to be a frankly revolutionary organization which was attempting to achieve political aims altogether at variance with the Canadian viewpoint. He said he had perused carefully the various resolutions to be brought before the Congress and was dismayed to find that each contained some distinctly revolutionary principle to which he could not commit the Trades and Labour Congress of Canada, and he felt he must vote against them all.

The Federation demanded full recognition and enforcement by the various governments of the recommendations of the Washington Conference in regard to an eight-hour day and 48-hour week, and imposed on affiliated organizations the obligation "to frustrate by all

available means the attempts to shelve the convention at Washington."

On the question of the control of raw materials a resolution was carried favouring the establishment by the International Labour Office of an international council, representative of all nations, for the distribution of raw materials; the workers' organizations, further, were asked to use their influence "to immediately control and distribute all raw materials." Mr. Halford, the Canadian delegate, stood alone in opposition to the resolution on the distribution of raw materials, taking the same line as the Canadian Government representative at the League of Nations Assembly at Geneva. He declared that Canada would never consent to outside interference with their raw materials and would never surrender the right to sell materials in the best market. The revolutionary motion must, he declared, inevitably lead to further encroachments on the domestic policy of producing nations. He voted against the resolution because he considered that the question of raw materials was one which must be left to the decision of the nations possessing them. The delegates of Italy and Norway, opposed all resolutions tending to strengthen the League of Nations, considering it to be a capitalist organization. The socialization of land and other means of production was also recommended and the Bureau of the International will be asked to open negotiations with the Internationals of miners, seafarers, transport workers, etc., as a beginning in the socialization of the transport industry. A resolution in favour of "the mutual cancellation of international war debts as a means of counteracting the effects of the crisis in the money exchange", was carried by the conference. Canada and Belgium voted against this resolution, Great Britain remaining neutral.

The conference further recommended the establishment of an International Loan on the security of the wealth and resources of all nations. This resolution was opposed by the delegates from Canada, Norway and Italy.

In reply to a manifesto by the Moscow International in which the Bolshevik leaders threatened to "destroy the yellow Amsterdam International," the Federation expressed the view that such attacks did not emanate from the Russian proletariat, but were proof of ignorance or evidence of bad faith arising out of the unwholesome desire to destroy the worker's organizations in every country, and sent a greeting "to all workers who have been misled as to the aims of the Trade Union International". A resolution to this effect was carried by an overwhelming majority of the delegates, only Norway opposing it, and Italy remaining neutral. A further resolution declared it to be "inadmissible that chiefs of government, even communists, should at the same time be leaders in the workmen's international movement".

In the report of a delegation which investigated conditions in the Ruhr

basin of Germany an extremely grave state of affairs was described, population being overcrowded, cost of living bearing no relation to wages rates, and food being very scarce. The Congress declared that "the organized workers are prepared to use all and every means to oppose and to prevent a dictatorship over the workers in the Ruhr district".

The speeches and voting on the various resolutions, according to press despatches, revealed three distinct schools of trade union thought as being represented in the Congress: the Left group, comprising Italy, Norway, Sweden and Switzerland, were communistic trade unionists; Great Britain, France, Germany and other European countries were represented by centre socialist trade unionists, while on the right, J. H. Halford, the Canadian delegate, declared himself on every occasion to be simply a trade unionist without any political label.

ANNUAL CONVENTION OF THE CANADIAN BROTHERHOOD OF STATIONARY ENGINEERS, FIREMEN AND HELPERS

THE first annual convention of the Canadian Brotherhood of Stationary Engineers, Firemen and Helpers met at Calgary, Alberta, on December 4. Delegates attended from Edmonton, Calgary, Lethbridge, Medicine Hat, Crow's Nest Pass, Drumheller, Wayne, and other points. The organizer for Alberta presented a statement which showed the Brotherhood to be highly organized in the province. He stated it was his intention at an early date to visit other provinces with a view to organizing for the Brotherhood. It was agreed that the Brotherhood should take steps to obtain a Dominion Grand Lodge charter, and to appoint a Grand Lodge and elect officers pending the obtaining of the charter. Resolutions were passed dealing with the following subjects, among others: in favour of the abolition of the Permit System; against interchangeable

certificates; in favour of mine owners being compelled to have certificated engineers on all steam operated and hoisting machinery; that the Mine Schedule be put in abeyance for the present and the United Mine Workers' of America Schedule be adopted; that the Grand Lodge take up with the Minister of Public Works the question of Boiler Inspectors' salary; that no strike be called unless sanctioned by the Grand Lodge; that all plants of 100 h. p. or over have two men on duty at one time when in operation; that all plants have licensed men irrespective of motive power; against the requirements that first-class engineers must have machine shop experience; in favour of a second-class man, who has had direct charge for two years and second-class experience for four more years being entitled to sit for first-

class license; that ammonia compression rooms have ample light and ventilation and at least two exits; that no boiler or engine be allowed to work over 25 per cent over-load, as rated by the Inspectors' Department. Some discussion took place with regard to the "check-off" system, and the Executive was instructed to take up the matter with the Attorney-General's Department.

It was decided that the 1921 convention should be held at Calgary, and that the Grand Lodge should be located at Edmonton. Mr. Charles Baker, of Edmonton, was elected president, Mr. H. Wight, of Drumheller, vice-president, Mr. James Adair, Box 837, North Edmonton, secretary, and Mr. Robert Haysey, Edmonton, organizer.

REPORT OF THE EMPLOYMENT SERVICE OF CANADA FOR THE FOUR WEEK PERIOD OF NOVEMBER 8 TO DECEMBER 4, 1920

REPORTS from Employment Offices to the Dominion Headquarters of the Employment Service of Canada, Department of Labour, for the four weeks period of November 8 to December 4 show a decrease in the number of placements as compared with the preceding period. The Offices reported that 22,718 placements were effected during the period as compared with 28,854 reported during the previous four weeks, a decrease of 6,136.

During the period under review regular placements by weeks were reported

as follows: Week ended November 13—6,432; week ended November 20—6,227; week ended November 27—5,122; week ended December 4—4,937. In addition 4,934 casual jobs (employment of a duration of less than one week) were supplied and were reported by weeks as follows: Week ended November 13—1,450; week ended November 20—1,410; week ended November 27—1,121; week ended December 4—953. Placements in casual work during the preceding period totalled 6,679, representing a decrease during the present period of 1,745.

The accompanying chart shows gra-

phically the number of applications, vacancies and placements effected by weeks since the beginning of April, 1919. The chart indicates that during the period November 8 to December 4 a downward tendency was shown by the curves for applications and placements. The curve for vacancies indicates that there was a decrease in the number of vacancies reported to the offices for the first two weeks of the period and a slight increase during the latter part of the period. This recovery is probably an indication of the demand for workers for the holiday trade. It will be noted, however, that the supply of labour (applications) is still greatly in excess of the demand (vacancies). Placements showed a steady falling off throughout the period.

The accompanying table presents in some detail the work of the offices for the four weeks period ended December 4. It will be observed that at the beginning of the period on November 8, there were 7,257 applicants unplaced. This

compares with 12,840 unplaced applicants on December 4, after allowance had been made for cancellations and placements. The number of vacancies remaining unfilled on November 8 totalled 9,974 as compared with 5,620 vacancies unfilled at the end of the four weeks period, after making allowance for vacancies filled and cancelled. In comparing the above with the corresponding week of last year it may be of interest to note that the total number of applicants unplaced on December 8, 1919, was 8,362 and the number of vacancies unfilled was 13,107 as against 12,840 applicants and 5,620 unfilled vacancies on December 4, 1920.

During the present period under review the number of applicants registered at the offices totalled 40,969 while the number of vacancies notified by employers to the Service was 27,248. When compared with the report of the preceding period this represents a decrease in registration of 1,419 applicants and a decrease in vacancies notified of 4,908.

UNEMPLOYMENT IN TRADE UNIONS AT THE CLOSE OF NOVEMBER, 1920, AS REPORTED BY UNIONS MAKING RETURNS

THE present article on unemployment among the members of local trade unions deals with unemployment as at the end of November, 1920, and is based on returns received from 1,498 labour organizations with a total membership of 216,285. For all occupations reporting, 10.0 per cent of the members were unemployed as compared with 5.99 per cent at the end of October, 1920, and with 3.58 per cent at the close of November, 1919. Unemployment, as used here, has reference to involuntary idleness due to economic causes. Persons occupied in work other than their own trades, or who are idle because of sickness or as a direct result of strikes or lockouts, are not considered as unemployed. As the number of unions making returns varies from month to month

with consequent variation in membership upon which the percentage of unemployment is based, it should be understood that the percentage of unemployment figures have reference only to those unions reporting.

That the percentage out of work at the end of November was larger than in both October, 1920 and November, 1919, was due to there having been less employment in the manufacturing and mechanical industries, particularly among metal, machinery and conveyance workers, and in the building and construction group. There was also a marked increase in the number out of work in lumbering and logging.

Table I on next page summarizes the returns by provinces. There were in-

creases in unemployment in every province, both as compared with the figures for the preceding month and, also for the corresponding month in 1919, the increases in British Columbia, Quebec and Ontario being especially pronounced.

TABLE 1.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

Nov. 1920....	2.21	1.98	13.83	6.38	4.32	4.13	3.63	24.44	10.01

The percentages reported unemployed in the different groups of industries are indicated in table II on page 76.

Unemployment in the manufacturing and mechanical industries, as indicated by returns received from 386 organizations with a combined membership of 55,273 persons, was considerably more prevalent than in both months used in this article for comparative purposes, 15.6 per cent of the members having been out of work as compared with percentages of 11.9 and 3.2 in October, 1920, and November, 1919, respectively. Workers in metals, machinery and conveyances and clothing were especially slack, but there was

also considerable idleness among workers in the food, tobacco and liquor, textiles, cordage and carpets, printing, publishing and paper goods and jewelry divisions. In pulp, paper and fibre the percentage of unemployment was smaller than in October, 1920, and November, 1919. Tradesmen in the leather, boots, shoes and rubber, wood working and furniture and glass bottle sub-groups were more fully employed than in the preceding month, but the percentages out of work were larger than in November, 1919.

In metals, machinery and conveyances, the unemployment was reported largely in Quebec, occurring to a considerable extent in shipyards, and also in Ontario and British Columbia. In food, tobacco and liquors, the most pronounced loss in employment was reported in abattoirs in Saskatchewan. A considerable percentage of the unemployment in the clothing sub-group occurred in Montreal, but it may be noted that garment workers' unions in Toronto, another large centre in the clothing industry, are not fully represented in this report.

In addition to the members reported unemployed, a large amount of short-time was registered by unions of moulders, boiler makers, pattern makers, metal polishers, buffers and platers, machinists, iron, steel and tin workers, meat cutters and butcher workmen, cigar makers, textile workers, tailors, garment workers, cloth, hat and cap makers, paper makers, compositors, pressmen, bookbinders, engravers, piano, action and key, boot, shoe and leather, and jewelry workers.

Reports from 602 organizations of transportation workers, having a combined membership of 81,552 persons, indicated that 2.61 per cent of the members were out of work as compared with .91 per cent in October, 1920 and 3.87 per cent in November, 1919. Employment for steam railway employees (whose returns constitute about 71 per cent of the entire group membership reporting) showed less activity

than in both months used in this article for comparative purposes, 2.86 per cent of the members being unemployed as compared with .53 per cent in the preceding month and with 1.17 per cent in November 1919. While this increase in unemployment was general throughout the country, the numbers out of work in Ontario and Quebec were the largest. The percentage unemployed among street and electric railway employees was slightly more pronounced than in October, 1919 and November, 1920. On the contrary, the number idle in the navigation sub-group was smaller than in both months. Teamsters and chauffeurs, as registered by 22 unions, were not quite as fully engaged as in October, but the percentage out of work was somewhat smaller than that recorded in November, 1919. Considerable short time was reported by unions of conductors, engineers, firemen, carmen, trainmen, maintenance of way employees, longshoremen and teamsters and chauffeurs.

In the mine, quarrying and refining of ores group, returns were tabulated from 35 unions with combined membership of 11,164 persons, showing that .58 per cent of the members were out of work as compared with percentages of .11 in October, 1920 and 1.14 in November, 1919. Employment for miners was not as brisk as in the preceding month, but the percentage of idleness was less than in the corresponding period in 1919. Some unions of mine workers reported that not all their members were working full time. Mill and smeltermen, as indicated by two organizations, continued to be fully employed.

The percentage out of work in the building and construction group, as registered by 261 organizations having an aggregate membership of 30,318 persons, was 12.44, as compared with 3.70 per cent in October, 1920, and with 5.82 per cent in November, 1919. While all provinces participated in the increase in unemployment in this group, Ontario with 1,897 tradesmen unemployed, reported the largest number idle, but the percentage of 44.4 in Manitoba

was the most pronounced. Bricklayers, masons and plasterers, carpenters and joiners, electrical workers, painters, decorators and paper hangers, tile layers, lathers and roofers, steam shovel and dredgemen, hod carriers and building labourers reported less activity than in both months used for comparison. The percentages out of work among granite and stone cutters, plumbers and steam-fitters, and bridge and structural iron workers were larger than in October, 1920, but they showed declines from the proportion of idleness in November, 1919. Some unions of bricklayers, masons and plasterers, carpenters and joiners, electrical workers, granite and stone cutters, painters, decorators and paper hangers, steam shovel and dredgemen, wood, wire and metal lathers recorded considerable short time.

In the public employment group, as indicated by returns received from 72 organizations with a total membership of 6,927 persons, there was more unemployment than in October, 1920, and November, 1919, 3.07 per cent of the members being out of work as compared with .01 per cent in the former month and with .47 per cent in the latter. The decrease in activity in this group occurred among civic employees and was partly seasonal in character. There was, moreover, some short time reported in this sub-group.

The percentage out of work among lumber and logging workers, as reported by five unions with a combined membership of 14,790 persons, was 42.60, as compared with 25.39 per cent in the preceding month. Employment in these organizations in Ontario and British Columbia, in which provinces most of the members were located, was considerably less brisk than in the preceding month, partly as a result of the continued closing of sawmills for the winter. Figures for comparison with November, 1920, are not available.

Unemployment in the group of miscellaneous trades, as indicated by 132 unions with an aggregate membership of 14,030 persons was less prevalent than in both months here used for com-

TABLE III.—UNEMPLOYMENT ON NOVEMBER 30, 1920

parative purposes, 3.09 per cent of the members having been out of work as compared with 4.44 per cent in October, 1920, and with 3.24 per cent in November, 1919.

Retail clerks, as reported by six unions showed no unemployment as compared with a small percentage of idleness in the preceding months. Musicians and theatre employees and stationary engineers and firemen were more fully employed than in October, 1920, and November, 1919. The reverse

however, is true for hotel and restaurant employees and barbers. The percentage out of work among unclassified workers was considerably smaller than in October, but it was somewhat larger than in November, 1919. Some unions of hotel and restaurant employees, barbers, musicians and unclassified workers reported a considerable amount of short time.

The tabular statement on pages 78-79 presents the returns in some detail.

EMPLOYMENT CONDITIONS IN CANADA DURING THE PERIOD NOVEMBER 27 TO DECEMBER 18 AS REPORTED BY EMPLOYERS

WEEKLY reports from employers to the Dominion Headquarters of the Employment Service of Canada, Department of Labour, during the four weeks from November 27 to December 18 inclusive, show continued declines in the volume of employment afforded by these employers during each of the weeks under review.

The change reported for each week as compared with the preceding week is as follows:

Week ending November 27, a decrease of 8,768 persons or 1.2 per cent.

Week ending December 4, a decrease of 10,378 persons or 1.5 per cent.

Week ending December 11, a decrease of 9,714 persons or 1.4 per cent.

Week ending December 18, a decrease of 12,411 persons or 1.9 per cent.

During the four weeks under review, employment conditions in the different parts of Canada were substantially the same, decreases being registered in every province during the period as

a whole. In the Maritime Provinces, however, conditions were slightly better than elsewhere, due to the re-opening of the winter ports. Increases in employment in this district were shown during the weeks of December 4 and 11, but the declines in the first and last weeks of the period under review were somewhat larger. Within the section, firms in New Brunswick registered additions to their payrolls during the last three weeks of the period, while in Nova Scotia there were increases during the weeks of December 4 and 11. The contractions in payrolls in Ontario were most pronounced, aggregating in the four weeks, 18,478 persons. In Quebec, the Prairie Provinces and British Columbia, however, the decreases were also substantial. It may be noted that employment in the Maritime and Prairie provinces was still considerably above the level of that afforded by the same firms on January 17, while losses in this comparison occurred during the last two weeks of the period in Quebec and during all four weeks in Ontario and British Co-

lumbia. It may be noted also, that during the same period in 1919 employment showed steady declines, from week to week, though the shrinkages in payrolls were not as pronounced as during the weeks under review.

A summary of the returns by industrial groups shows that firms in Retail Trade, only, registered increases in employment during all four weeks of the period, the additions to staffs in this group aggregating 2,571 persons. These gains may be attributed to activity attendant upon the Christmas Season in stores. In Coal Mining and Logging there were net increases with declines during one or more weeks of the period. The expansion in these groups is due to seasonal activity, but the decrease which occurred during the week of December 18 in the former, may be attributed to the mild weather prevailing, while that in Logging was caused mainly by men leaving lumber camps for the holidays. There was also an increase in Leather Products during the period as a whole, with slight decreases during the last two weeks. In Clay, Glass and Stone Products, Mineral Products, n.e.s., Non-Metallic Minerals other than coal (quarrying), Personal Services (chiefly laundries), Local, Railway and Water Transportation there were declines in employment, taking the period as a whole, with increases during one or more of the weeks. Firms in Building and Railway Construction, Edible Animal Products, Lumber and its Products, Edible Plant Products, Iron and Steel, Non-ferrous Metal Products, Pulp and Paper, Rubber Goods, Textiles, Wood Distillates, Miscellaneous Manufacturing Industries (chiefly Chemicals and Tobacco), Metallic Ores, Hotels and Restaurants, Telegraph and Telephone

Operation and Wholesale Trade recorded contractions in payrolls during all four weeks of the period under review.

The decreases in employment in Iron and Steel Products, which amounted to 7,770 persons, were the most pronounced registered during the period and occurred in the Railway Car, Steel Shipbuilding and Crude, Rolled and Forged divisions. While practically all the provinces participated in these declines, those which were reported in Ontario and Quebec were the largest. There were marked declines of a seasonal character during the four weeks under review in Building and Railway Construction, Lumber and its Products and, in a less pronounced degree, in the Transportation groups. The losses in Textiles, which were also decided, occurred largely in the Garment, Thread, Yarn and Cloth and Hosiery and Knit Goods Branches, mostly in Ontario and Quebec. The contractions in payrolls in Pulp and Paper Products were partly seasonal and partly attributable to the continued shortage of power and water. Inactivity in Musical Instrument, Chemical, Tobacco and Electric Current plants resulted in the losses in Miscellaneous Manufacturing Industries. In Telephone Operation, the declines were widespread in application, most of the individual losses being small. The decreases in Water Transportation were largely caused by the closing of the summer ports.

The accompanying chart shows the weekly percentage of change in the number of persons on payrolls since the base week (January 17, 1920) as reported by those employers making returns, the number averaging over 4,800 firms a week. The returns for the week of January 17, 1920, are being taken as base figures. It had

been the intention to take the week of January 1, but this was found impracticable because of the abnormal situation at that time, due to the annual inventory and holiday period, and the consequent reductions in staffs. The week of January 17 coincides fairly closely with the termination of this season and accordingly reflects more normal conditions. The curve indicates a steady downward tendency since September. During the first two weeks of the period being reviewed, employment was still at a

higher level than at the middle of January, but the firms reporting for the weeks of December 11 and 18 showed reduction in payroll as compared with their base figures. The highest point reached by the curve during this period was on November 27, when the employers making returns showed increases aggregating 11,469 persons or 1.7 per cent over their January returns. On December 18, however, the figures dropped to 15,764 persons, or 2.4 per cent below the base.

EMPLOYMENT IN THE BUILDING TRADES DURING NOVEMBER, 1920, AS INDICATED BY BUILDING PERMITS

EMPLOYMENT in the building trades, as indicated by the value of building permits issued in 56 cities, showed a decrease during November as compared with the preceding month, the total value of building permits falling from \$9,660,538 in October to \$5,289,321 in November, a decrease of \$4,371,217, or 45.3 per cent. Prince Edward Island and British Columbia were the only provinces to register increases in this comparison, while of the declines recorded in the remaining provinces, that of \$3,094,706, or 51 per cent in Ontario was the largest.

As compared with the figures for the corresponding month in 1919, there was a decrease of \$2,443,942 or 31.6 per cent, the value for November, 1919, having been \$7,733,263. In this comparison all provinces showed declines, that in Ontario of \$1,704,786, or 36.5 per cent, being the most pronounced.

All the larger cities, Montreal, Toronto, Winnipeg, Edmonton, and Vancouver, reported decreases in the value of the permits issued, both as compared with the figures for October 1920, and November, 1919.

Of the smaller centres, Sherbrooke, Guelph, New Westminster, Point Grey and Victoria registered increases as compared with the previous month and also with the corresponding month in 1919.

The returns from 35 cities formerly used in this report (which are distinguished by asterisks, and which are also tabulated separately for statistical purposes) show that the total value of building permits issued by these cities amounted to \$4,689,201, as compared with \$9,018,593 in October, 1920, and with \$7,004,453 in November, 1919. There was, therefore, a decrease of \$4,329,392, or 48 per cent as compared with the returns for the preceding month, and of \$2,315,252, or 33.1 per cent in comparison with the figures for the corresponding month of last year.

EMPLOYMENT FOR CIVIC EMPLOYEES IN FIFTEEN CITIES, NOVEMBER, 1920

REPORTS from fifteen cities showing the number of employees temporarily engaged and the wages paid these employees during the month of November, 1920, showed a decrease of not quite 4 per cent in the number of employees and of nearly 14 per cent in the amount of wages paid, as compared with the figures for the preceding month. In November, 1920, 10,269 persons were temporarily employed and the wages amounted to \$935,358.74, as compared with 10,671 employees and an aggregate payroll of \$1,085,055.10, in October.

In comparison with returns for the same period in 1919 there was an increase of slightly over 13 per cent in the number of employees and of nearly 38 per cent in the wages paid, there having been 9,059 employees with a total payroll of \$679,097.98 in November, 1919.

Hamilton, London, and Vancouver registered increases in the number of persons temporarily employed on municipal work both as compared with the returns for October, 1920, and November, 1919. Ottawa showed a gain as

EMPLOYMENT (BOTH CONTRACT AND MUNICIPAL WORK) AFFORDED WORKPEOPLE TEMPORARILY EMPLOYED

†Additional contractors.

*Revised figures.

compared with the figures for the preceding month, with a nominal decline in comparison with November, 1919. On the contrary, in Montreal, Toronto, Winnipeg, Brandon and Regina there were decreases in the former and increases in the latter comparison, while at St. John, Moose Jaw, Saskatoon, Calgary, Edmonton, and Victoria there were reductions in both cases.

As to wages, London recorded increases both as compared with the pre-

ceding month and with the corresponding month in 1919. Edmonton showed an increase over the figures for October, with a decline as compared with November, 1919. On the other hand, Montreal, Ottawa, Toronto, Hamilton, Winnipeg, Brandon, Regina, Saskatoon, Calgary, Vancouver and Victoria registered reductions in comparison with October, 1920, and increases over November of the previous year. In St. John, and Moose Jaw there were decreases in both comparisons.

FAIR WAGE CONTRACTS, DECEMBER, 1920

DURING December the Department of Labour received for insertion in the LABOUR GAZETTE the following information relative to eight fair wage contracts, of which seven were awarded by the Department of Public Works, and one by the Department of Railways and Canals. All the contracts contained the usual fair wage clause which provides for the prompt payment of such wages as are current in the district in which the work is to be performed, and for observance on the various works under contract of the prevailing hours of labour, and which otherwise prevents abuses and secures the legitimate rights of the labour employed.

A statement was also received as to supplies ordered by the Post Office Department, subject to the Regulations for the suppression of the Sweating System, the securing of fair wages, etc.

DEPARTMENT OF PUBLIC WORKS.

Repairs to wharf, Royston, B.C. Name of contractor, Wm. Greenlees, Vancouver, B.C. Date of contract, November 26, 1920. Amount of contract, \$4,774.

Removing of old swing bridge and the construction of substructure of single

leaf Strauss Trunnion Bascule Bridge, Burlington Channel, Ont. Name of contractors, The Canadian Engineering and Contracting Co., Ltd., Hamilton, Ont. Date of contract, November 30, 1920. Amount of contract, \$75,053.

Reconstruction of eastern breakwater, St. Martins, N.B. Name of contractors, The Stephen Construction Co., Ltd., St. John, N.B. Date of contract, December 7, 1920. Amount of contract, \$24,651.

Erection of clock tower to Post Office, Pembroke, Ont. Name of contractors, The Estate of Walter Beatty, Pembroke, Ont. Date of contract, October 4, 1920. Amount of contract, \$3,800.

Construction of Horse Stables at Fairmont (Royal Canadian Mounted Police Barracks), Vancouver, B.C. Name of contractor, Robert Moncrieff, Vancouver, B.C. Date of contract, November 30, 1920. Amount of contract, \$44,932.

Construction of Garage, Coal Bin and Vegetable Storage at County Hospital, St. John, N.B. Name of contractors, The Stephen Construction Co., Ltd., St. John, N.B. Date of contract, December 22, 1920. Amount of contract, \$8,637.

Public Floating Wharf, Graham Landing, B.C. Name of contractor, L. H. Rawlings, Nakusp, B.C. Date of contract, December 15, 1920. Amount of contract, \$13,832.

DEPARTMENT OF RAILWAYS AND CANALS.

Construction of alterations on and additions to Coach Paint Shop at Transcona, Man. Name of contractor, J. B. Duncan, Winnipeg, Man. Date of contract, December 17, 1920. Amount of contract, \$22,000.

POST OFFICE DEPARTMENT.

The following is a statement of payments made in December for supplies ordered by the Post Office Department, subject to the Regulations for the Sup-

pression of the Sweating System, the securing of fair wages, and the performance of work under sanitary conditions.

Nature of orders.	Amount of orders.
Making metal dating stamps and type and other hand stamps and brass crown seals.....	\$ 3,717.89
Making and repairing rubber stamps, daters, etc....	124.19
Supplying stamping material, pads, and ink.....	128.00
Supplying mail bag fittings.....	10,493.90
Supplying mail bagging.....	51,345.94
Making up and supplying letter carriers' uniforms, etc.....	49,038.40
Repairing letter boxes, etc.....	1,560.00
Supplying keys, etc., for letter boxes.....	133.00
Supplying mail clerks tin boxes.....	913.50

RECENT INDUSTRIAL AGREEMENTS

THE following is a summary of the more important industrial agreements recently received by the Department. While the conclusion of every industrial agreement implies the acceptance, to a greater or less degree, of the principle of collective bargaining, it should not be overlooked that in a number of cases the agreement was reached only after the employees had been on strike. By verbal agreement is understood a schedule of rates and conditions agreed upon between the employees and the majority of employers, and in effect although not signed. The agreements are arranged by industrial groups.

Metals and Machinery

AMHERST, N.S.—THE ROBB ENGINEERING WORKS, LIMITED, AND THE SHOP COMMITTEE REPRESENTING THE MACHINISTS, SPECIALISTS AND APPRENTICES. Agreement in effect from September 1, 1920, to September 1, 1921.

This agreement was summarized on pages 1641-2 of the December, 1920,

issue of the LABOUR GAZETTE. It was stated that the agreement was between "the Robb Engineering Works, Limited, and the Shop Committee representing the Machinists, Specialists and Apprentices, Amherst Lodge No. 605." The words, "Amherst Lodge No. 605" should have been omitted.

In the same paragraph under the heading of Grievances, the statement that the Company will meet "representatives of the union," should have read "representatives of the shop committee."

SARNIA, ONT.—MASTER TINSMITHS' ASSOCIATION, AND TINNERS' UNION No. 482. Agreement in effect from May 1, 1920, to April 30, 1921.

Hours of labour: January, February and March, eight hours per day; remaining months, ten hours.

Wages: per hour—70 cents. Overtime, 7 p.m. to midnight, time and one-half; thereafter and Sundays and holidays, double time.

KINGSTON, ONT.—CANADIAN LOCOMOTIVE COMPANY, AND AMERICAN FEDERATION OF LABOUR, No. 15959. Agreement in effect from June 15, 1920.

Hours per week, forty-five, in five shifts of nine hours on first five days of week. Saturday rate, time and one-half.

Conditions in former agreement to continue in force.

Wages: per hour, 43 cents.

Clothing

HAMILTON, ONT.—NINE LOCAL FIRMS AND JOURNEYMEN TAILORS' UNION OF AMERICA, No. 149. Agreement in effect from May 17, 1920.

Minimum scale—weekly system: Per week—tailors, \$36; vest makers, pant makers, \$22; pressers, 1st class, \$36; pressers, 2nd class, \$30; operators, \$36; helpers, 1st class, \$25; 2nd class, \$18; bushelmen, 1st class, \$36.90; 2nd class, \$32.

All employees to be good-standing union members. Non-union employees to join union within ten days of employment.

Hours per week, forty-eight. Overtime, time and one-half; holidays, double time. In any week containing a holiday, over eight hours to be overtime in any day.

In any disagreement as to hours, wages, etc., work not to cease until matter is investigated according to constitution of Union.

Work to be as equally divided as possible at all times, especially in slack months. No person to be discharged through scarcity of work during slack season. Shop and equipment to be supplied by employer. Women to be paid same scale as men for same class of work.

Labels to be furnished for distribution by good standing members.

Piece-work scale: Coats, from \$11 to \$17.50; overcoats, from \$13.50 to \$17; extras 60 cents per hour.

Specified time allowances listed for operations under following heads: try-ons, facings, pockets, linings, edges, seams, miscellaneous; all extras not mentioned in this bill of prices to be paid at 60 cents per hour; busheling and alterations, same rate as weekly work.

Pulp and Paper

MERRITTON, ONT.—LINCOLN PAPER MILLS COMPANY, LIMITED, AND INTERNATIONAL BROTHERHOOD OF PULP, SULPHITE AND PAPERMILL WORKERS, THE INTERNATIONAL BROTHERHOOD OF PAPER MAKERS, AND THE INTERNATIONAL BROTHERHOOD OF STATIONARY FIREMEN AND OILERS. Agreement in effect from August 16, 1920 to August 16, 1921.

Printing and Publishing

NEW GLASGOW, N.S.—NEW GLASGOW PRINTERS, AND INTERNATIONAL TYPOGRAPHICAL UNION No. 794. Agreement in effect from March 25, 1920, to May 1, 1921, with thirty days' notice of change.

Employers guaranteed against strikes if agreement is adhered to.

Only union members to be employed in composing room, except in case of present employees.

Wages: Per week of 48 hours—Machine operators, compositors, \$20. This minimum wage was increased 20 per cent on September 23, 1920, all members then receiving over the minimum being granted at least 10 per cent on their wage.

If Saturday be given a half holiday, working hours to be arranged to serve best interests of employer.

Work over eight hours to be overtime, at rate of time and one-half. Sundays and holidays, double time.

No work to be executed by any office which is a party to this agreement when coming from or destined for any printing office in which a strike exists.

Apprenticeship: ratio, one to three journeymen or major portion thereof regularly employed; apprentices to have at least a fair common school education; term of apprenticeship, five years. Wage scale: third year, one-third of journeymen's scale; fourth year, 40 per cent; fifth year, first half, 50 per cent; second half, 60 per cent. All apprentices to be registered with officers of Union.

CALGARY, ALTA.—LOCAL EMPLOYERS, AND STEREOTYPERS AND ELECTROTYPERS No. 109. Agreement in effect from May 26, 1920, to May 25, 1921.

Minimum scale: Per week—days: foremen, \$50; journeymen, \$45; Nights: foremen, \$53; journeymen, \$48.

Apprentice scale: first year, $\frac{1}{4}$ of journeymen's scale; second year, 1-3; third year, $\frac{1}{2}$; fourth year, 2-3; fifth year, $\frac{3}{4}$.

In event of cost of living in October, 1920, showing increase over April, 1920, of ten per cent or more, scale of prices herein set forth to be increased by five per cent for last six months of term of this agreement, cost of living figures to

be those of the Department of Labour at Ottawa for the Province of Alberta.

WINNIPEG, MAN.—EMPLOYING PRINTERS' AND BOOKBINDERS' ASSOCIATION, AND PRINTING PRESSMEN AND ASSISTANTS' UNION No. 87. Agreement in effect from July 1, 1920, to July 1, 1921.

Committee to be appointed from each party to settle disputes. In case of failure of adjustment, question to be referred to an Arbitration Committee of three members, one from each party and a third chosen by them.

Hours of labour, until May 1, 1921, 48 per week, day; 45 per week, night; thereafter, 44 hours per week. Overtime, first three hours, time and one-half; thereafter and Sundays and holidays, double time.

Union to furnish capable help when possible.

Scale of wages: Per week—flat bed cylinder pressmen, \$44; cylinder feeder and assistant, \$31; pressmen in charge of one or two Platen-sized cylinders (Osterlind, Kelly, etc.), \$38; Gordon pressmen in charge of three or more presses, \$38; Gordon pressmen in charge of one or two presses, \$31; pressmen in charge of one roll rotary, not less than \$44; assistant on one roll rotary press, \$31; pressmen on two roll rotary press, not less than \$44; night work, \$3 per week over day scale.

Apprentice scale: Per week—(time not to start till boy starts working steadily on the presses) one month to 6 months, \$11; 6 months to 12 months, \$13; 12 months to 18 months, \$15; 18 months to 24 months, \$17; 24 months to 30 months, \$19; 30 months to 36 months, \$22; 36 months to 42 months, \$26; 42 months to 48 months, \$31. At end of three and one-half years apprentice to secure approval of his foreman before receiving the assistants' scale of wages.

VANCOUVER, B.C.—SUN PUBLISHING COMPANY, AND PRINTING PRESSMEN'S AND ASSISTANTS' UNION No. 69. Agreement in effect from January 28, 1920, to August 31, 1923.

From September 1, 1920, union members of local No. 69 to be employed in press-room department if available. Disputes to be referred to a standing committee of two from each party. If agreement is not reached by committee within ten days questions shall be submitted to arbitration, decisions of arbitration board to be final and binding. If at any time an arbitration agreement shall be concluded between the American Newspaper Publishers' Association and the International Pressmen's and Assistants' Union the agreement shall be accepted by both parties to this contract.

Questions regarding a new contract and scale to be settled by arbitration if conciliation fails.

Union to use efforts to furnish capable men in mechanical department.

Foreman to be judge of competency. Complaints against foreman to be referred to local Joint Standing Committee of Union and Publisher; decision to be final. In case of a tie vote, committee to elect fifth member to render decision.

If better terms or wages are allowed by any Vancouver newspaper during life of this agreement, the same terms shall be granted by the employer to members of this local.

Scale of Wages—Per hour: night work, 90 cents; forty-five hours per week; no payment for holidays if no work done. Day work, 84 3-8 cents; forty-eight hours per week; no payment for holidays when no work done.

Overtime for actual overtime worked, time and one-half. Sundays (except for regular editions) and certain holidays, double time; other holidays, time and one half.

One apprentice for each four journeymen or fraction thereof. Apprentices in third year to receive minimum of one-third of journeymen's wage; in fourth year, one-half; in last year, two-thirds. No apprentice to work overtime except when journeymen are employed.

If extra men are required and cannot be furnished by the Union, employees

to be paid overtime only after eight and one-half hours per day.

Foreman to have right to employ help and discharge for specified reasons, and to be judge of competency of journeymen.

Employer to be protected against walk-outs, strikes or boycotts.

Building and Construction

No members to participate in sympathetic strike except with affiliated organizations directly connected with amusement business, and then only after two weeks' notice in writing.

Grievances to be settled by arbitration by three arbitrators, one appointed by each party and a third by them. This clause to be in effect only if terms of agreement are carried out by employers, and not in event of a call by officers of the Alliance or by the officers of the American Federation of Musicians.

Public Utilities

MOOSE JAW, SASK.—CITY OF MOOSE JAW AND INTERNATIONAL BROTHERHOOD OF ELECTRICAL WORKERS, No. 802. Agreement in effect from February 1, 1920, to February 28, 1921.

All work to be done by or under

supervision of qualified Electrical Workers.

A journeyman to be an employee with at least four years' experience in the trade. An apprentice to have had three months' actual service at some branch.

Hours of labour: eight and one-half per day; five hours on Saturdays. First seven hours thereafter, time and one half; after midnight and Sundays and holidays double time.

Apprentices to serve four years. A journeyman lineman in charge of one to four men to receive $2\frac{1}{2}$ cents per hour above regular scale. If in charge of more than four men, journeymen to receive sub-foreman's wages.

Vacancies to be filled according to seniority of service.

Electrical worker on entering employ of City may be required to pass an examination and will then be classed as first, second, third or fourth year journeyman and be paid accordingly.

Wage schedule: Per month—plant electrician, \$175; assistant plant electrician, \$120; meter tester, \$125. Per hour—meter installer, 70 cents; 1st 6 months, 50 cents; 2nd 6 months, 60 cents; 3rd 6 months, 65 cents; after 18 months, 70 cents; lineman, 85 cents; sub-line foreman, 90 cents; apprentice lineman, 1st year, 50 cents; 2nd year, 60 cents; 3rd year, 70 cents; 4th year, 80 cents.

PRICES RETAIL AND WHOLESALE IN CANADA, DECEMBER, 1920

THE downward movement in prices continued, being most marked in grains, livestock, meats, textiles, metals, and building materials. The only increase of importance was a seasonal change in eggs.

In retail prices the average cost in 60 cities of a list of staple foods for a family of five at the middle of the month was \$14.84 as compared with \$15.32 at the middle of November, \$14.73 in December, 1919, and \$7.96 in December, 1914. The chief decrease was in sugar, but there were important decreases in meats, and slight decreases in nearly all the

other articles. Potatoes averaged slightly higher but eggs advanced considerably, fresh eggs averaging 7c. per dozen higher and storage eggs 3c.

In wholesale prices the departmental index number was down to 290.5 for December as compared with 304.2 for November, 322.7 for December, 1919, and 137.6 for December, 1914. The chief decreases were in grains, livestock, textiles, hides and leather, iron, building materials, and in raw furs. The only increase was in the dairy products group due to advances in eggs.

The accompanying tables and notes give details as to the prices movement during the month and as compared with the same month in previous years.

The table of retail prices gives statistics for some 60 localities in Canada, having a population of approximately 10,000 or over. Quotations are obtained by the correspondents of the LABOUR GAZETTE, resident in each locality, from representative dealers doing a considerable trade with workmen at the middle of the month. All prices are for delivered goods. The exact quality for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The list of commodities includes over one hundred staple foods and groceries, coal, wood and coal oil, the number of articles having been increased twice since January, 1910, when the regular publication of these statistics was begun.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workmen. The first class is of houses in good condition, favourably located in such districts, with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences or with incomplete conveniences.

The weekly family budget calculated in terms of the average prices in the cities for which reports are received includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed in similar calculations by various authorities. For some articles comparatively large quantities are in-

cluded owing to the absence of other important items of the same class. For instance the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. As market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportion of expenditure on the various foods therefore tends to be maintained.* In fuel and lighting the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the difference in quality. It was estimated, when the budget was first published in 1912, that these calculations represented from sixty to eighty per cent of the expenditure of an ordinary family, according to the total income. For the average family of five the expenditure on these items of food, fuel, light, and rent would be perhaps two-thirds or about sixty-five per cent of the total income. While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were designed to afford a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruit, fresh and canned vegetables, etc.; so that the comparative expenditure would be little changed.

The index number of wholesale prices is based on the quotations for 271 commodities, and is the simple average of the percentages of current prices of the several commodities in relation to the average prices for the base period, 1890-

*At times when the price of an article heavily weighted for this purpose rises (or falls) abnormally the increase (or decrease) in food prices so indicated is exaggerated and this should be taken into account in using the budget as an indicator of changes in the cost of living.

**COST PER WEEK OF A FAMILY BUDGET OF STAPLE FOODS, FUEL AND LIGHTING, AND RENT IN TERMS OF
THE AVERAGE PRICES IN SIXTY CITIES IN CANADA.**

*December only.

1899, these being therefore made equal to 100. The quotations for most farm products are obtained weekly and averaged for the month, the quotations for other commodities are taken for the middle of the month. The table of index numbers shows the changes by groups and sub-groups for the previous month and for corresponding months back to 1913.

Retail Prices

The general decline in meats which began in August continued, the decreases being greater and more general than in previous months. The chief declines for the month were in pork following the steep decline in the hog market. Eggs showed considerable advances, strictly fresh eggs averaging 88.8 cents per dozen, as compared with 81.7 for November and 86.6 for January, 1920, while storage eggs averaged 73.9 cents as compared with 70.3 for November and 69.5 for January, 1920. Milk averaged slightly higher, there being increases at New Glasgow, St. John's, and Fernie and decreases at Halifax, Brockville, and Winnipeg. Butter averaged lower, the decreases in dairy butter being somewhat greater than in creamery. There were also some decreases in oleomargarine. Cheese was lower in some of the cities. Bread declined in 34 of the cities. There was a general decrease in the prices of flour and rolled oats. Corn meal, barley, rice, and tapioca were lower. Canned peas, corn, and tomatoes were lower. Beans and onions showed a number of decreases. In potatoes the price increased in 25 cities but declined in 17, averaging slightly higher. There was a general decline in sugar. In anthracite and bituminous coal there were some slight increases but also a number of decreases so that the price averaged fractionally lower. Wood, however, averaged higher. Coal oil also advanced. Rents were steady.

Wholesale Prices

GRAINS AND FODDER.—The grain markets recovered somewhat from the low levels at the end of November but prices were still considerably lower than at the beginning of November. Wheat No. 1, Manitoba Northern, rose at Winnipeg from \$1.87 to \$2.07½ per bushel at the beginning of the month, higher prices being paid to secure stocks at the close of navigation. The price then fell off to \$1.85 but the market improved gradually until at the end of the month the price was up to \$1.93. Ontario winter wheat No. 2 rose from \$1.60-\$1.70 to \$1.85-\$1.90 at the beginning of the month and was steady thereafter. Barley advanced from 93c. to \$1.10 per bushel at Winnipeg but fell to 88c. Oats rose from 56c. to 59c. but fell to 53c. at Winnipeg. American corn advanced from \$1.05 to \$1.15. Flax seed rose from \$2.00 to \$2.14 but fell to \$1.95. Rye advanced from \$1.50 to \$1.53. Hay was \$1.00 per ton easier at Montreal and Toronto. Bran and shorts were slightly higher.

ANIMALS AND MEATS.—Cattle at Winnipeg recovered from the 50c. drop at the end of November, again reaching \$9.00-\$10.00 per hundred pounds, but fell 75c. during the next week and 25c. the following week. Butcher cattle at Toronto were steady at \$10.00-\$11.50 per hundred pounds. Beef hindquarters recovered from the drop at the end of November, reaching 22-25c. per pound, the same price as at the beginning of November. Hogs declined further at the beginning of the month and were down to \$13.75 per hundred pounds, but recovered to \$15.00 by the end of the month. Dressed hogs were 1c. lower at 20-22c. per pound. Bacon fell from 48c. per pound to 44c., rose to 46c., and declined to 45c. Ham had fallen from 38-39c. per pound at the end of November to 36-37c. and early in December fell 3c. more but recovered 2c. at the middle of the month. Lard fell from 28½c. per pound to 25½c. Sheep were lower at \$5.00-\$6.00 per hundred

(*) Including delivery.

† Quotation for floods from Dominion Bureau of Statistics.

* Prices at the beginning of month.

pounds. Fowl fell from 28-33c. to 26-32c. Turkeys were down to 48-52c. but later recovered to 51-55c.

DAIRY PRODUCTS.—Finest creamery butter at Montreal fell from 55c. per pound to 53c. but recovered to 55c. At Toronto creamery butter fell from 57-61c. to 52-60c. Cheese was down to 18c. for fodder grades, but the finest grades of fall make advanced to 24c. per pound. Eggs advanced from 85-90c. to \$1.00-1.10 per dozen. Select storage eggs fell at Toronto from 76-78c. to 74-78c. per dozen.

FISH.—Dried cod was down from 9c. per pound to 8c. and haddock from 6c. to 5c. The export market for dried fish continued quiet owing to financial conditions in the West Indies and South America, and the prices of dried cod were expected to be down to \$7.00-8.00 per quintal, ex-vessel, as compared with \$12.00 a year before. The pack of canned lobsters was larger than in 1919 owing to the better weather conditions during the season. The demand, however, was not strong.

FRUITS AND VEGETABLES.—Winter apples were easier at \$6.00-7.00 per barrel at Toronto. Lemons were easier at \$4.50 per box and oranges at \$5.75-7.25. Evaporated apples were lower at 13½c. per pound and prunes at 14c. per pound. Potatoes were down to \$1.65-1.75 per bag in small lots at Toronto. Onions were easier at \$1.50-2.00 per hundred pounds. Turnips were lower at 50c.-75c. per bag. Canned corn was down to \$1.45 per dozen.

MISCELLANEOUS FOODS.—Bread was down to 7.33c. per pound at Toronto and 8c. per pound at Victoria. There were also declines reported in a number of other cities. Rolled oats declined to \$3.70 per bag. Flour, spring wheat patents, was down to \$11.10 per barrel at Toronto. Sugar fell 5c. per pound to \$10.76 per hundred pounds in barrels at Toronto. Glucose, molasses, and honey declined. Pepper was down to

30c. per pound and cream of tartar to 55-75c.

TEXTILES.—Wool, Ontario unwashed, was down to 11-21c. per pound according to grade. Raw cotton declined at New York to 15.8c. per pound. Coloured cottons declined from 10 per cent to 15 per cent. Raw silk was comparatively steady at New York, Japan silk being slightly higher and Italian slightly lower. Jute, hessians, flax fibre, and tow were lower.

HIDES, LEATHER, BOOTS AND SHOES.—Beef hides and calfskins were down to 7c. per pound at Toronto. Horsehides were down to \$2.00-3.50 each. Leather, Spanish sides, fell to 72-73c., oak sides to 79-80c., and waxed uppers to 50c. per pound.

METALS AND IMPLEMENTS.—Pig iron fell from \$61.80 to \$54.30. Iron bar was down from \$5.75 to \$4.75 per hundred pounds. Black sheets were down from \$10.70 per box to \$8.45 and galvanized sheets from \$12.65 to \$10.55. Wrought iron scrap was down from \$20.00 per ton to \$15.00. Brass was lower at 35c. per pound and copper at 19c. Lead was down to 7¼c. per pound. Quicksilver fell to \$50.00 per flask. Silver was down to 66c. per ounce. Zinc spelter was down to 8c. per pound. Solder was lower at 29c. per pound. Tin fell 1c. to 44-46c. per pound.

FUEL AND LIGHTING.—Coal and coke were steady. Coal oil was down 1½c. per gallon to 28c.

BUILDING MATERIALS.—Spruce deals at St. John, N.B., fell to \$34.00 per M. Hemlock fell \$5.00 per M. at Ottawa to \$40.00-42.00. Spruce was also \$5.00 lower at \$45.00-\$47.00 per M. Oak and birch declined. British Columbia fir at Winnipeg fell \$3.00 per M. Shingles were also lower about 20c. per M. Flooring at Victoria fell \$5.00 per M. Building paper declined from \$1.95 to \$1.70 per roll, for tarred, and from \$1.85 to \$1.65 for plain fibre. Lead pipe was down to

*Preliminary figures. †Nine commodities off the market, fruits, vegetables, etc. One line of spelter was dropped in 1915.

14½c. per pound. Sash cord fell from 86c. per pound to 68c. Copper wire, white lead, turpentine, and paint declined. Glue, window glass, and putty also fell.

HOUSE FURNISHINGS.—Prices of some lines of furniture were lowered at the end of the year.

DRUGS AND CHEMICALS.—Bleaching powder receded slightly from the high level reached during the summer. Alum,

brimstone, caustic soda, and soda ash were lower.

MISCELLANEOUS.—Malt was down to \$1.35 per bushel. In raw furs prices were again lower. In pulp and paper markets, prices were lower. Ground wood pulp fell to \$95.00-120.00 per ton. Bleached sulphite fell to \$175.00 per ton. Rope fell to 29½c. per pound. Crude rubber was down to 18c. per pound.

PRICES DURING 1920 IN CANADA AND IN OTHER COUNTRIES

THE movement of prices in Canada during 1920 was marked by a steady decline after the month of May, all groups showing substantially lower levels by the autumn, except fuel. From March, 1919, to May, 1920, the rise in the general index number had been steady, the previous high point in November, 1918, at 290.9 having been passed in July, 1919, when 294.0 was reached. Both domestic and foreign demand for goods improved materially following the first few weeks of readjustment after hostilities ceased. Toward the end of 1919, however, there were indications that the upward movement was coming to an end. Livestock, meats, hides, leather and some chemicals began to decline, and export markets (which had been the predominating influence in raising prices after the early part of 1919) began to exercise less demand. Somewhat similar conditions existed in the great exporting countries, such as the United States and Great Britain, and these were similarly affected by the unfavourable exchange situation and its detrimental effects on their export trade to Europe. There had been considerable speculation in some articles much in demand for export and the change in conditions led to large stocks of such goods being thrown on the markets. This was first most pronounced in the case of raw silk, and Japan experienced a financial panic

early in 1920. But similar conditions affected other commodities also, raw furs, hides, metals (except iron and steel), wool, jute, later cotton and sugar, beginning to fall steadily until the end of the year, coming down to or near to pre-war levels in many cases. Grain and livestock also fell steeply in the autumn, and the low prices realized so affected the purchasing power of farmers that production of goods in many lines was curtailed. Finally iron began to fall, and lumber with some other building materials receded also toward the end of the year. Pulp and paper markets became much weaker. Coal and coke continued to be a great exception to the general decline, but even these were easy to obtain as compared with earlier in the year, when at times high premiums over regular prices were paid to secure delivery. Trade and industrial conditions connected with the movements of prices were discussed in the monthly letter for December issued by the National City Bank of New York and these conditions, as between the United States and Canada are so similar that the following extracts from the letter in question will throw valuable light also on conditions in the Dominion.

The downward movement of prices, of which the first signs appeared last May, and which became quite evident in October, has become more general and precipitate in the last month. The hopes that had been entertained

that the descent to a lower level would be accomplished so gradually that the losses would be covered by current profits, without serious interruption to business and without unemployment, have proven illusory. Rarely, if ever, has there been so great a decline in commodity prices in so short a time.....

The fall in prices of farm products during the past month has given a more serious aspect to the entire business situation. Following the declines in September and October the cuts again have been very deep, and are of far-reaching influence. When the price recessions occurred in the months following the armistice and a general reaction in business seemed to be imminent, farm products were sustained by a heavy foreign demand, and with the buying power of the farm population sustained, a good general trade over the country was maintained, and the industries that had been disturbed were brought back into line. The expectations of continued prosperity during the coming year have been based upon the assumption that with Russian products still out of the competition the demands from Western Europe would continue to sustain prices for farm products. This expectation has been disappointed. The drop in farm products lets down practically one-half of the industrial organization, and renders it unable to continue purchases of the other half on the same scale, without a general readjustment of the basis on which the exchanges are made.

This slump in business conditions has demonstrated again that the great movements in the business world which make good times or bad times are spontaneous and beyond control. They are due to mass action and mass psychology. The business of the country depends upon the purchases and policies of tens of millions of individuals, and when they become generally possessed of a spirit of confidence, and go ahead with their planning and spending under its influence, we have a period of prosperity. The difference between free spending and careful economy by all the people of this country means a vast difference in the volume of trade and the level of prices.

A state of full prosperity is seldom long maintained because it means a balanced state of industry, and the balance may be disturbed by many influences, originating at home or abroad. The war gave an enormous but unhealthful stimulus to the industries and brought on the rise of wages and prices. Following the war, there was another abnormal period, due to scarcity resulting from the war and the release of demands that had been in restraint. The actual scarcity was exaggerated in many instances, as in the case of clothing and sugar, by an insistent demand which would be supplied at any price. A market in which demand exceeds supply is

commonly called a seller's market, on the theory that the seller names the price, but the prices upon many commodities in the latter part of 1919 and early part of 1920 were made by a scramble of buyers and the bidding of dealers eager to supply them. There was a shortage of cloth and of sugar, but the market was over-stimulated by the action of buyers, who in many instances tried to get more than they really wanted in the expectation that the limited supplies would be allotted, or to provide for the future. Nobody was more deceived than the dealers and producers. The price of raw sugar in Cuba went to 23½ cents per pound, and has since dropped to 4¾ cents. The sugar movement was an extreme one but that in textiles was of the same kind, and both illustrated the swing of mass purchasing power.....

The Spring months were unfavorable to trade, goods did not move normally, the jobbing trade fell off, and with production at a high rate goods were accumulating. Money was tight, middlemen had heavy obligations outstanding and more goods coming, bought for the Fall trade. Then came the flood of cancellations and the cutting of prices. The price structure was top-heavy. As confidence in the future of prices was undermined the attitude of the trade and the public completely changed. Nobody would buy except to meet immediate wants, and goods came out from many quarters. When it developed that the orders for Fall goods cancelled last May were not to be re-instated, and that Fall needs were readily satisfied in the open market at continually falling prices; and when as the fall advanced the usual buying for Spring delivery did not develop, it became evident that confidence would not be restored or prices stabilized until a far-reaching thorough readjustment of costs and prices had been accomplished.

The prices of what the farming population wants to buy must come down to correspond with the prices of what it has to sell. Until then the state of reciprocity which is necessary to the full employment of labour and general prosperity cannot exist. The equilibrium must be restored. There will be no confidence in the situation until the equilibrium is restored. Merchants are not going to buy goods which they know their customers are unable to buy, railroads will not buy equipment to carry goods which will not be bought, construction work will be at a standstill, enterprise will be dead, until a basis of fair exchange for the products of the industries is reached.

This is not a matter of resolution, resentment, or concerted action. It results from the character of trade relations, from the fact that all business consists of an exchange of services. What one class of producers does not get, it cannot spend. With

trade relations out of balance the circulation of goods must be curtailed.

The elements of strength in the situation which we have named heretofore remain, and will become effective when the conditions are right. The main condition is that all along the line costs must come down until confidence in prices is re-established. Confidence will not be re-established in prices that rest upon inflated costs, even though all profits have been eliminated. It will not be re-established in prices that rest upon any artificial support, for all such supports are temporary. Prices may go lower than can be permanently maintained; it is the usual thing in times of reaction that the momentum carries prices too low, just as in times of expansion they are carried too high.

This is pre-eminently a price situation. There is no lack of confidence in the future of business when a basis upon which it can go forward is found. Price fluctuations in recent years have been so wild that the public has become distrustful of all prices. For the moment buyers stand aside and there is little resistance to the downward movement, but of course this is a temporary situation.

The only prices that seem to be really authoritative are those that prevailed before the war, but it cannot be supposed, that in the present state of industry, this level will be generally reached or maintained. Prices that go too low will recover their proper place as the revival spreads.

These elements of strength have been discussed at length by B. M. Anderson, Jr., Ph. D., in the December issue of the *Chase Economic Bulletin* issued by the Chase National Bank of New York.

The present Bulletin is concerned with the ability of the credit system of the United States to meet the shock involved in the rapid decline in commodity prices which has taken place in recent months and which still continues. It is the belief of the writer that the price decline which has already taken place has left the general credit system intact, and that no further price declines which may be reasonably anticipated could possibly endanger it. Individual failures have occurred, and the future, doubtless, holds an even larger number, but the resources of the credit system in absorbing and diffusing losses are so great, and the tangible assets upon which credit in the United States has been extended are so great, that the general system is impregnable.....

The aggregate security is immeasurably greater than the aggregate of credits. Credits, on the average, are impregvably secured. Such difficulties as exist grow out

of the fact that, in certain particular cases, the specific security is less than the average. This fact means that, in certain individual cases, losses from bad debts cannot be avoided by businesses and even banks. None the less, the modern credit methods of all large businesses, and the fact that "receivables" generally consist of a large number of items of moderate size, greatly lessen the prospect of serious loss to any given mercantile creditor.....

The position of most large businesses is exceedingly strong. They have "ploughed under" a very high percentage of the abnormal profits of the past five years..... The most conservative bookkeeping policies have been followed; plant and other fixed assets have been generally estimated at pre-war values while "betterments," and even additions to plant, have often been charged to "cost" rather than entered into capital account. The volume of quick assets of most large businesses was very great when the price decline began, and the surplus of quick assets over quick liabilities was very great...

The decline in prices and the prospective decline in wages mean a great decline in costs. Those industries whose selling prices are fixed consequently find their position greatly improved by a period of falling prices. Notable among these are the railroads, other public utilities, and gold mines, all of which will find their margins of credit greatly increased and their credit correspondingly improved. Not a few public utilities will be saved from bankruptcy by the decline in prices, and not a few now in the hands of receivers will be released from receivership.

Pressure will also be removed by the decline in prices from that large body of people with fixed incomes, widows and orphans and other beneficiaries of trust funds, bondholders in general, university professors and others, who have suffered most as prices have risen.

An immense volume of deferred construction, housing, railroad building, vitally needed improvements in public utilities and the like, is waiting to start up when the tension in the capital market is relaxed and when costs of construction reach reasonable levels. The improved credit condition of the railroads and public utilities makes this all the more important. For perhaps the first time in our history, our railroad will be in good credit at a time when prices are at bottom.....

Wild figures, running high into the billions, of losses sustained in connection with falling prices have recently appeared in the press. One writer estimates the losses of the farmers alone at many billions of dollars through recent declines in farm commodities. A lurid picture has been presented. It is, undoubtedly, true that a sharp and unexpected decline in commodity prices does present a

serious problem, but there is no need to exaggerate it or to regard it as wholly evil. First of all, we must remember that, despite price changes, the actual physical wealth of the country remains. The country still has its railroads and its real estate, its houses and its factories, its hogs, its corn, its cattle, and its cotton.....

Bradstreet's index number shows a decline in wholesale commodity prices of approximately 25 per cent from the peak, on February 1, 1920, to November 1, 1920. Bradstreet's figures show a 35 per cent decline from the peak to December 1, 1920. Dun's index number has moved more slowly, while the Bureau of Labor Statistics' index number has declined still less. On the other hand, the index number of the New York Federal Reserve Bank, which rests on twelve most important basic commodities, shows a decline of about 36 per cent from the middle of May, 1920, to the end of November, 1920. It is possible that Bradstreet's figure has not exaggerated the changes in the markets. Indeed, there is reason to suppose that many of the quotations that have entered into all of the index numbers are higher at the present time than actual cash prices of goods in quantity. It is known that there are a good many markets where the buyer who is willing to buy in quantity for cash can get very substantial concessions from quoted prices. Bradstreet's index number shows that the peak of prices came in February, 1920; most of the others find the peak in May. There is, however, no great disagreement between Bradstreet's and the others on this point, since the decline from February to May in Bradstreet's number was slight, and the great decline has come in Bradstreet's number since the first of May. As a general rule, Bradstreet's index number moves more rapidly than does either Dun's or the Bureau of Labor Statistics' index number. It is a forecaster, as a rule, of the other two. The index number of the New York Federal Reserve Bank is clearly in advance of the average of wholesale prices. Basic commodities usually move first. For the purposes of the present discussion, Bradstreet's index of November 1, 1920, will be taken as representing approximately the facts on December 1. We can safely assume that there has been a decline of 25 per cent in the general average of commodity prices from February 1, 1920, to December 1, 1920.

Canada

The accompanying tables show the movements of prices in Canada and in other countries during 1920 and as compared with previous years.

Until recently the wholesale prices' index number of the Department of Labour has been the only one calculated for Canada. Recently, however, Professor H. Mitchell of McMaster University, Toronto, has calculated an index number of wholesale prices, designed to reflect very sensitively the trend of trade and industrial conditions. This number is based on forty commodities only, twenty foods and twenty materials, mainly semi-manufactured goods. A comparatively remote base period is used, average prices for 1900-1909 being made equal to 100 but it has been calculated only for each month of 1914, 1918, 1919 and 1920. The statistics on which the index number is based are mainly from published records of the Department. It will be seen that the changes in prices from month to month during 1919 and 1920 shown by the index number are more violent than those shown by that of the Department and that Professor Mitchell's index number indicates lower price levels at the end of 1920 than at the beginning of 1918 for the forty commodities included.

United Kingdom

In the United Kingdom the *Labour Gazette*, published by the Ministry of Labour, reported the prices of foods at the beginning of December to be 182 per cent higher than in July, 1914, as compared with a level 191 per cent higher a month before. The chief decrease was in sugar which fell 4d. per pound. Potatoes and flour were also lower, but milk, eggs and fish were higher. Rents were found to be 42 per cent higher than in July, 1914, clothing between 300 and 310 per cent, (a fall from 320 per cent a month before) fuel and light

140 per cent, sundry items at 130 per cent. The average increase in all items since July, 1914, therefore, appeared at about 169 per cent as compared with 176 per cent at the beginning of November (per cent a month before), fuel and light 140 per cent, sundry items 130 per cent. At the end of December the Ministry of Labour reported food had decrease to level 178 per cent above July, 1914, and all items to 165 per cent. In wholesale prices the index number of the *Economist*, London, for the end of December was down to 269.3 as compared with 299.7 at the end of November, and 334.7 at the end of December, 1919. The chief decreases for the month were in cereals and meats and in textiles, but all groups were down.

France

The General Statistical Office of France has reported that its index number of wholesale prices has shown a continuous increase in prices up to October, 1920, the rise in recent months being almost entirely accounted for by the increase in food prices. The general level of the 45 articles included in September had been only 356 per cent, and in July, 1914, whereas in July, 1919, the increase had been only 356 per cent and in July, 1917, 344 per cent.

Italy

Wholesale prices in Italy increased again in August and September as shown by the index number of Professor Bachi following decreases in June and July. Retail prices in Rome in October were reported by the municipal Labour Office to be higher than in September by nearly

5 per cent and 241 per cent higher than in 1914. Food prices in Milan in November also appeared to be 7.4 per cent higher than in October, being 415 per cent higher than in July, 1914. Food prices in Florence were also up 9.1 per cent in November and 378 per cent above 1914 levels.

Belgium

The Belgian Ministry of Labour had published since the cessation of hostilities index numbers showing changes in prices and in the cost of living. An index number including 56 commodities showed a level in January, 1920, 296 per cent higher than in July, 1914, but in October 377 per cent higher.

Switzerland

The Secretary of the Central Association of Workers' Organizations has published figures showing the increase in the cost of living in Switzerland from June 1, 1912, to October 1, 1920. The increase in food, light and heat appeared at 154.5 per cent, clothing 140 per cent, rent 60 per cent, and other expenses 90 per cent. The average increase in all appeared at 121.9 per cent.

United States

The United States Bureau of Labour Statistics has issued figures showing changes in the principal items of household expenditure up to December, 1920, showing averages for eight cities in December as compared with last June and with 1914. In the December issue of the *LABOUR GAZETTE*, p. 1676, a table from the *Monthly Labour Review*, pub-

lished by the Bureau, was reprinted, showing the changes in costs by principal items from December, 1914, to June, 1920, figures for 31 cities being included in the compilation. The following table gives figures for eight cities,

INCREASES PER CENT IN THE COST OF LIVING IN EIGHT UNITED STATES CITIES IN JUNE 1920, AND DECEMBER, 1920, AS COMPARED WITH 1914.

Item	June, 1920	Dec., 1920
Food.....	110.9	75.6
Clothing.....	191.3	159.5
Housing.....	41.6	49.5
Fuel, etc.....	57.6	79.0
Furniture, &c.....	191.8	191.9
	115.1	99.2

the averages for June costs being almost the same as those for the 31 cities in June previously given.

It appears that the substantial declines in food and in clothing have been offset partially by increases in rent and fuel.

The Special Commission on the Necessaries of Life for the Commonwealth of Massachusetts, established in 1919, has issued detailed statistics as to prices and costs of the important commodities and has calculated cost of living index numbers each month from 1910 to 1920. The accompanying table shows the figures for certain months during this period. It will be seen that from 1910 to 1916 the principal changes in prices were in foods but that all groups, except rent, rose steeply toward the end

COST OF LIVING INDEX NUMBERS BY GROUPS FOR MASSACHUSETTS 1910 TO 1920.

Average Costs in 1913 — 100.

of 1916, clothing rising most steeply not only during 1917 but during 1918, 1919, and the early part of 1920, falling steeply and almost continuously thereafter, but especially during the last three months of the year.

In wholesale prices the various index numbers showed the general movement to be upward until May, with considerable declines each month thereafter. Those index numbers which are more sensitive to general trade conditions, owing to the number and nature of the articles

included, as well as the methods of computation, have shown somewhat steeper decreases than the numbers less sensitive. The Federal Reserve Board of the United States has calculated an index number including 90 commodities designed to indicate the trend of business conditions, grouped to show the price movements of exports, imports, raw materials, etc., during 1919 and 1920 as compared with 1913. The accompanying table shows the figures as published in the *Federal Reserve Bulletin*, p. 1217.

INDEX NUMBERS OF WHOLESALE PRICES IN UNITED STATES—FEDERAL RESERVE BOARD

RECENT LEGAL DECISIONS AFFECTING LABOUR

THE three legal decisions which are summarized below have reference respectively to a case of employers' liability in Saskatchewan, the right of seamen to sue for wages in Quebec, and the validity of an Order of the Minimum Wage Board of British Columbia.

An employer must see that guards for machinery are in proper position, and instruct inexperienced employees on dangerous work

In the issue of the LABOUR GAZETTE for February, 1920, a case was reported in which a carpenter failed, in the Court of King's Bench of Saskatchewan, to recover damages against his employer for the loss of four fingers in a wood-working factory. The accident occurred when the plaintiff, who was a bench hand, was working on a shaper with which he was not familiar, the guard of which was not attached at the time. The Court held that both the plaintiff and defendants were at fault, and that under such circumstances the injured person bore all the loss. The plaintiff appealed against this judgment. The Court of Appeal held that the employers were at fault in not properly instructing the plaintiff and in not seeing that the guard was on the machine, and that there was no contributory negligence on the part of the plaintiff. The grounds on which the trial Court found the plaintiff at fault were as follows: (a) Putting the wood up to the knives against the grain of the wood; (b) The way he had his hands on the wood; (c) His omission to attach the template to the piece of wood he was working with; (d) In not using the stud. With regard to these points the Appeal Court held: (a) that it was not established by the evidence that he had put the wood to the knives against the grain; (b) That his failure

to hold the wood in such a way as to minimize the danger was due to the failure of the defendants to show him how it should have been held; (c) That if the template should have been used the obligation of instructing the plaintiff to that effect rested on the defendants, and in the absence of such instructions they could not be heard to complain that it was not used. The defendants' expert testified that he could have done the work the plaintiff was doing quite easily without having the template on; (d) A day or so before the accident when the defendants' superintendent was assisting the plaintiff in cutting a rail they did not use the stud, consequently in the opinion of the Court the plaintiff was justified in concluding that it was not necessary to attach the stud. The defendants' manager testified that he had instructed the superintendent to see before he put a man on the machine that he was capable of using it and understood it. The failure of the superintendent to do so and his failure in not having the machine guarded, in the opinion of the Court, constituted the proximate cause of the accident. The appeal was therefore allowed with costs, and judgment was given for the plaintiff for damages assessed at \$2,000. (*Saskatchewan — Aimer vs. Cushing Bros. Limited.*)

Seamen in Quebec may recover wages under \$200 if employer is bankrupt, and if minors, they may sue for wages in their own names

Actions were brought in the Admiralty Court at Montreal by eight seamen for the recovery of wages amounting to an aggregate sum of \$763.73 owing for work on a lake vessel. With regard to one of the claimants, it was alleged on behalf

of the defence that the action was to recover a sum of only \$50.56, and as under the Canada Shipping Act no proceedings for the recovery of wages under \$200 may be instituted before the Admiralty Court by any seaman or ship's

apprentice, the plaintiff had no right of action in this instance. It was pointed out by the Court that there were four exceptions to the prohibition invoked, and if any one of these were established the Admiralty Court had jurisdiction over cases involving less than \$200. One of these exceptions was insolvency on the part of the owner, and the court found that the defendant was insolvent within the meaning of the Bankruptcy Act. The second was when the ship was under arrest, and as the ship had been arrested by one of the plaintiffs, the claims of the seven others were admitted.

A second objection was raised by the defence on the ground that four of the plaintiffs were minors and were therefore incompetent to sue for their wages. It was submitted that the Admiralty Court administered the Maritime law of England in like manner as if the cause

were being tried in the English Court of Admiralty, and under this law a seaman under twenty-one years of age could not sue in his own name, but must do so through a custodian or guardian. On the other hand it was claimed for the plaintiffs that under Article 304 of the Quebec Civil Code a minor of fourteen years of age may bring action in his own name to recover his wages.

It was held by the Court that Article 6 of the Civil Code provides that an inhabitant of Quebec is governed by the laws of the province respecting the status and capacity of persons, and therefore the four minors had a right of action.

Judgment was therefore given in favour of the plaintiffs and the defendant was condemned to pay the eight claims. (*Quebec—McCullough vs. Ss. Samuel Marshall.*)

Order of Minimum Wage Board declared inoperative owing to insufficient notice being given of its coming into effect

An action was brought against a court stenographer in Victoria, B.C., on the charge of a contravention of an order of the Minimum Wage Board of British Columbia. The case was tried in the City Police Court of Victoria. The prosecution charged that between August 16, 1920, and November 27, 1920, the accused had unlawfully employed a girl under 18 years of age in an office occupation at a wage less than \$12 per week, being the wage specified in an order of the Minimum Wage Board, effective on the 16th day of August, 1919, for girls under 18 years of age in an office occupation during the second six months of their employment. Counsel for the defence attacked the validity of the order of the Minimum Wage Board, and this contention was upheld by the Court. The judgment of the Court was based on the fact that an insufficient time had elapsed between the issuing of the order and the date set for its coming into force. Notice of the order was published in the *British*

Columbia Gazette for July 17, 1919, but the date upon which the order was issued by the Board was not stated in the notice nor was it proved. The notice declared that the order should come into effect on August 16, 1919. It is provided however, in section 8 of the Minimum Wage Act that "such order shall become effective in 60 days from the date thereof, or if the Board shall find that unusual conditions necessitate a longer period then the Board shall fix a later date on which such order shall become effective." The Court declared "it is obvious that the date fixed in the notice is an error and misleading, as under the provisions in the section quoted, the Board, while having the power to fix a later date upon which the order shall become effective, cannot fix an earlier one." The judgment of the Court was that the order in question had never become effective and being therefore inoperative, the charge must be dismissed. (*British Columbia—Rex vs. Albutt.*)

THE LABOUR GAZETTE

Number 2

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

The month in brief

This issue of the LABOUR GAZETTE contains a review of strikes and lockouts in Canada during 1920, a report of the annual conference of the Canadian Association of the Building and Construction Industries, and an account of the formation of an Apprenticeship Council of the Building Trades. A bulletin on Joint Councils in Industry is also issued as a supplement to this number.

At the beginning of January unemployment among trade unions was 13.42 per cent of the total membership as compared with 10.01 per cent at the beginning of December and 4.98 per cent at the beginning of January, 1920. According to returns received from about 5,000 firms, there was a very slight increase in the average amount of employment as compared with the average for the previous month.

The cost of the weekly family budget of staple foods showed a further decline averaging \$14.48 at the beginning of January, as compared with \$14.84 at the middle of December, \$15.30 in January, 1920, and \$7.73 in January, 1914. The index number of wholesale prices also showed a decline, being 281.3 for January, as compared with 290.5 for December, 336.4 for January, 1920, and 136.5 for January, 1914.

The time loss due to industrial disputes was greater during January than during December, but less than in January, 1920. There were in existence during the month 10 strikes and lockouts involving about 964 workpeople and resulting in a time loss of 15,951 working days. At the end of the month there were on record 5 strikes involving about 384 workpeople.

Proceedings under the Industrial Disputes Investigation Act

During January the Department received reports from two Boards of Conciliation and Investigation established to deal with disputes between (1) the British Columbia Electric Railway Company, the Vancouver Power Company, Limited, and the Vancouver Island Power Company, Limited, and certain employees of each of the said companies, being members of Local Unions Nos. 213 and 230, International Brotherhood of Electrical Workers, and (2) the Canadian National Railways, all lines, and its employees, all classes. Three applications were received for the establishment of Boards, and a settlement was reached through mediation of the Department in a dispute for which application for a Board of Conciliation and Investigation had previously been received.

**Canadian
members on
panel Inter-
national
Enquiry Com-
mission**

Articles 411 and 412 of the Treaty of Versailles provide that in the event of a member of the International Labour Conference failing to observe the terms of

a convention, which had been ratified by such member, the Governing Body of the International Labour Conference may apply for the appointment of a Commission of Inquiry to deal with the situation. This Commission is to be drawn from a panel constituted by appointments made on the nomination of the respective members of the International Labour Conference, each member nominating three persons, a representative of employers, a representative of workers and a person of independent standing. The Dominion Government to carry out these provisions, has passed an order-in-council (P.C. 3126) submitting to the International Labour Office the names of the following persons as members of the panel on behalf of the Dominion of Canada: representative of employers, Mr. S. R. Parsons, British American Oil Company, Toronto, Ont., representative of workers, Mr. Joseph Gibbons, business manager of the Amalgamated Association of Street and Electric Railway Employees of America, Toronto Division, Toronto, Ont.; person of independent standing, the Right Honourable Mr. Justice Duff, Ottawa, Ont.

**Labour delega-
tion to Quebec
Government**

A delegation of representatives of the Trades and Labour Congress of Canada and the Montreal Trades and Labour Council waited upon the provincial government of Quebec on January 19, and presented their requests for labour legislation. For the first time the delegation included representatives of the railroad brotherhoods. Some of the requests arose out of recommendations of the International Labour Conference at Washington in 1919, and out of a Federal order-in-council of November 6, 1920, which

defined the powers of the provincial legislatures with respect to these recommendations (LABOUR GAZETTE, November, 1920, p. 1491). The measures asked for were: An industrial accident compensation law based upon the principle of compulsory state insurance; an act limiting the hours of work in industrial and commercial establishments to not more than eight per day and 44 per week, or 48 per week in industries where continuous operation is necessary; an act concerning the employment of women before and after childbirth; a Mothers' Allowance act; an act establishing pension funds for aged and needy persons; an act making it compulsory for all departments of the government, for commissions or other bodies acting under its control, and all works wholly or partially subsidized out of public funds, to include in their contracts and to observe in their works, a clause providing that the rate of wages and the working conditions be the union rates and conditions in force in the district where the contracts are executed be observed, and where there are no union rates to provide that the wages and general conditions in the district be observed; an act adopting the system of proportional representation in provincial elections; an act providing for the two platoon system for firemen; an act to bring municipal employees under the scope of the Industrial Disputes Investigation Act; an act to place cold storage plants under government control; and four acts respecting hygienic measures: (a) rendering compulsory the removal of old wallpaper before putting on new, (b) compelling the denaturing of wood alcohol before being used for painting and varnishing, (c) forbidding the use of spraying machines in painting, and (d) for the examination of barbers and the regulation of barber shops; also an act for free and compulsory education, to compel all children to attend school until 16 years of age, and all employed persons under 21 years of age, who are not able to read or write one of the official languages of this coun-

try, to attend an evening class; an amendment to the law governing the Catholic School Commission of Montreal to abolish the four district school commissions and to transfer their functions to the Central Catholic School Board of Montreal, of which the members should be elected by the Catholic tax payers; and amendments to the law for the fixing of minimum wages for women, and to the law providing for the inspection of scaffolding.

**Proposed
Workmen's
Compensation
Act for Quebec**

In connection with the request made by representatives of the Trades and Labour Congress of Canada to the Quebec

Government for a new Workmen's Compensation act, the Trades and Labour Congress have published in pamphlet form "A Study on Compensation for Industrial Accidents." The main features of the desired measure, which is based on the Ontario law, are outlined as follows: (1) The recognition of the right to compensation, the administration of the funds and the distribution of payments by a Workmen's Compensation Board of three members, the cost of the board to be paid out of the consolidated funds of the province; (2) (a) All the workers coming under the jurisdiction of the Act to be insured under a system of compulsory state insurance administration by this board, (b) the contributions to this insurance fund to be exclusively maintained by the employers. To this end they would be divided into groups of industries according to the risks inherent in each; (3) All the medical, surgical and hospital expenses to be paid from the same fund in all cases of industrial accidents and industrial diseases; (4) The Workmen's Compensation Board to have the power of making rules and regulations for the prevention of accidents, and safety committees composed of employers and employees to be formed in the factories and first-aid appliances to be installed; (5) The following indemnities to be paid in case of death

from accident: (a) Funeral expenses of the victim not exceeding \$125, (b) when the widow or an invalid husband is the sole dependent, a monthly allowance of \$40 during life, (c) when the dependents are a widow or an invalid husband and one or more children, a monthly allowance of \$40 and a supplementary monthly allowance of \$10 for each child under 16 years, (d) when the dependents are children a monthly allowance of \$15. The total of these allowances should not amount to more than two-thirds of the employee's salary, funeral expenses not included. If the widow re-marries the allowance should cease, but then she should have the right to a definite lump sum equivalent to two years' allowances, but even in this case the allowance should continue to be paid to the children entitled to it. (e) when the dependents are other persons than those mentioned above they should receive a reasonable allowance according to their pecuniary loss, the amount to be determined by the board and to be payable for as long a period as the board deems the deceased employee would have contributed to their support had he lived; (6) In case of total permanent incapacity the indemnity should be $66\frac{2}{3}$ per cent of the weekly salary of the employee with a minimum of \$12.50 per week. In case of temporary total incapacity the same amount should be paid, but only during the period of incapacity; (7) In case of permanent partial incapacity the indemnity should be $66\frac{2}{3}$ per cent of the difference between the weekly wages the employee was earning before the accident, and what he could earn after the accident, and a like amount in case of temporary partial incapacity, so long as the incapacity lasts. If the incapacity is not more than 10 per cent the board should have power to fix a lump sum for the indemnity; (8) Payments should be computed after a period of three days from the date of the accident; (9) All employees should come under the law except home workers, domestics, farmers and executive officers.

Various delegations to Alberta Government

On January 9, a delegation from the Alberta Federation of Labour waited on the Alberta government and presented various resolutions adopted during the recent convention at Edmonton, reported elsewhere in this issue. They urged the government to bring into force at once the \$13 minimum wage for women, recommended by the commission on the factory act (p. 1112 September LABOUR GAZETTE), pending the appointment of a minimum wage board; to call at an early date a conference of various interested bodies, including both federal and provincial representatives, with a view to formulating some practicable means of relief for the unemployment situation, and to bring about more co-operation between the local authorities and the working people; to amend the Workmen's Compensation Act to increase the amount of compensation to 90 per cent of a workman's normal wage, to cancel doctors' contracts for medical attendance and substitute a medical aid scheme that will guarantee adequate treatment for all workmen's sickness, the cost of which would be borne by a direct charge upon the workers and which would be supervised by the Workmen's Compensation Board; to introduce an industrial conciliation conditions act, creating a board of five with two representatives from the employees, two from the employers, and one by mutual agreement or by the government; to provide free treatment for tubercular patients in the province; to have barbers licensed, and to pass an act governing sanitation of barber shops; to adopt a fair wage clause in all government contracts; to have weekly payment of wages to all employees in cash or certified cheques; to prohibit air and electric hammers in the cutting of stone; to prevent the use of motion film pictures in bad condition; to have better fire and sanitary inspection in towns and villages in the province within the confines of the national parks; to introduce a maximum working week of 44 hours,

with provision of one day off in seven, and a new mechanics' lien act guaranteeing adequate protection to the wages of all workers.

During January, also, deputations from the Alberta Canadian Manufacturers' Association and Retail Merchants' Association interviewed representatives of the government of Alberta. The principal matters discussed by the manufacturers were the Factories' Act and the Workmen's Compensation Act. The manufacturers favoured the formation of a permanent minimum wage board of five members so that female workers might be assured of a fair wage. They recommended that persons insured under the Workmen's Compensation Act should receive 66⅔ per cent of their net earnings instead of the present flat rate. The Retail Merchants' Association, requested legislation for the removal of retail shops in the province from the jurisdiction of the Factories' Act, in respect to working hours, and for empowering municipal councils to fix opening and closing hours, half-holidays, and such matters relating to local business. They also favoured the formation of a minimum wage board of five members.

Industrial Safety Conference at Halifax

A conference of safety supervisors, called by the Nova Scotia Accident Prevention Association, was held at Halifax, N.S., on January 6, for the purpose of registering the progress made during the past year in industrial safety work and of discussing plans for future operations. Mr. G. D. MacDougall, of the Nova Scotia Steel and Coal Company, Ltd., President of the Association, occupied the chair, while among those attending were representatives of Halifax Shipyards, Ltd., the Nova Scotia Steel and Coal Co., Ltd., the Dominion Steel Corporation, the Dominion Atlantic Railway, the Nova Scotia Tramways and Power Company, Ltd., the Canadian National Railways, the Inverness Railway and Collieries, Ltd., the Acadia

Sugar Refining Co., Ltd., the Eastern Car Co., Ltd., and the Nova Scotia Accident Prevention Association. Many of these representatives described the progress of safety work in their individual plants. One of the largest industries in the Province reported a reduction of over 30 per cent in their accidents during the year, the reduction being attributed largely to the educational campaign carried on by the firm among its employees. Another firm which had only recently initiated special safety work reported a reduction in the number of injuries to workers amounting to 75 per cent of the total of the previous year. The delegates from Street Car and Railway corporations reported that owing to the importance of obtaining the co-operation of the general public in their efforts towards safety, special public instruction was being provided in addition to the work of directly safeguarding their employees. It was stated that the industrial firms in the province were always eager, both on humanitarian and economic grounds, to make any expenditures which might be suggested to them in the interest of safety. Mr. Fraser, field organizer of the Association, presented a report on the recent convention of the National Safety Council at Milwaukee, Wis., at which the most important lessons taught were the necessity of instruction in First Aid work; of safety instruction in public schools; and of public safety organization.

**Adjustment
of disputes on
Pennsylvania
Railroad**

A plan for the adjustment of labour disputes was recently adopted by the management of the Pennsylvania Railroad system after a series of conferences with the representatives of its engine and train crew employees, including enginemen, conductors, firemen, hostlers, trainmen and switch tenders. This plan, which became effective on the first of January last, follows in a measure the lines of the Canadian Railway Board of Adjustment No. 1. A joint reviewing committee composed, on behalf of

the management, of two representatives from each of the four regions of the system, and, on behalf of the employees, of the general chairmen of the men in the engine and train services, has been established as a medium for the settlement of controversial questions. It will meet monthly and will constitute a Court of Review involving grievance, rules and working conditions, including discipline. The votes of all members will be of equal power and not less than a two-thirds vote will be necessary to reach a decision upon any question presented. Details of the plan are announced as follows: "In all matters except individual discipline cases the full committee will vote, and its decisions will constitute precedents which will be binding equally with respect to similar existing or future cases upon the management and the employees in all four regions of the system uniformly. Discipline cases will be handled somewhat differently, as they involve a personal element which must be accorded recognition. It has therefore been decided when such a case comes before the joint reviewing committee the two representatives of the management in the region in which the case arises, together with the representatives of the employees involved, shall not sit as members of the committee during consideration of that particular case, but shall act as counsel for the presentation of their respective claims. The remaining members will hear the case and determine the matter at issue. The work of the joint reviewing committee will be supplemented by an extension of and improvement upon the methods of handling differences and grievances which were in effect prior to the war. Each division superintendent will have a meeting once a month with the local chairman of the engine and train service employees under his jurisdiction at which either side may present matters for consideration. Each general superintendent will have a monthly meeting with the general chairman, and the general manager of each region will also hold monthly meetings with the

general chairmen. Appeals may be taken in the order named, and appeals from the decision of a general manager will be taken to the joint reviewing committee of the system. Thus in final determination of any matter the employees through their representatives upon the joint reviewing committee will have equal power with the officers in determining the issue." Any agreement arrived at between the management and the men at a superintendent's, general superintendent's, or general manager's meeting will be placed in effect at once, but a report will be made immediately to the joint reviewing committee, which will, as soon as possible, either ratify or modify the agreement.

Trade union membership abroad Some interesting statistics respecting trade union membership in Great Britain and some foreign countries have been printed in recent publications of the International Labour Office. The figures for Great Britain show that the number of organized workers now exceeds 8,000,000 distributed among 1,300 unions. The rate of increase during 1919 was the highest ever recorded, almost 21 per cent, compared with 20 per cent from 1917 to 1918, and 19 per cent from 1916 to 1917. The following table shows the standing during the six years from 1914 to 1919, inclusive:

Year	Total Membership.	Males.	Females.
1914.....	4,176,000	3,735,000	441,000
1915.....	4,388,000	3,896,000	492,000
1916.....	4,669,000	4,043,000	626,000
1917.....	5,540,000	4,660,000	880,000
1918.....	6,645,000	5,423,000	1,222,000
1919.....	8,024,000	6,695,000	1,329,000

For the first quarter of 1920 the membership of the German free trade unions stood at 7,698,088—6,003,248 males and

1,694,840 females. The close of the third quarter showed an increase of 229,519, the standing being 7,927,607 composed of 6,254,415 males and 1,672,192 females. The metal workers' unions of Germany show the largest membership, having 1,677,336, of which 198,227 are females.

The membership of the Russian trade unions numbers 5,222,006. The largest group is the general transport workers which has 1,387,974 members. Included in the organized workers are the Soviet Government employees, who number 617,993.

The membership of the Federation of Free and Christian Trade Unions of Belgium at the close of the first quarter of 1920 was 156,631. The estimated membership of the Commission Syndicale du Parti Ouvrier of Belgium in October, 1920, was 720,000. The combined membership of these two bodies, which are representative of the Belgian workers, gives that country a trade union membership of nearly 900,000.

Dissolution of French General Federation of Labour ordered As a sequel to the general strike which took place last May throughout France, the dissolution of the General Federation of Labour was ordered by the Correctional Court of Paris on January 13. Some account of the strike which had for its main object the nationalization of public utilities, was given in the LABOUR GAZETTE for June 1920. It was there stated that the French Government when refusing to accept dictation from organized labour declared that the General Federation, in ordering a strike for political objects, exceeded the limits of the purpose for which it had received its charter in 1884. The Cabinet accordingly ordered that proceedings be taken against the members of the administrative council of the General Federation for alleged violation of the law under which the charter was issued. The labour leaders named in the indictment were MM. Leon Jouhaux, Dumoulin, Laurent, Lapierre and Claveyrac. The prosecution alleged

that whereas the act provided that unions are to concern themselves exclusively with the economic interests of their members, the General Federation pursued such objects as speedier demobilization, general amnesty, cessation of military intervention in Russia, and especially, nationalization of public utilities. The formation of an Economic Labour Council under the auspices of the General Federation, with avowed revolutionary objects, was also alleged in the case against the accused. Hearing of the case was delayed until December. The Federation was charged with having political objects in view instead of merely the defence of the economic interests of its members; and of admitting to membership in the Federation irregularly formed unions such as those of the teachers, and postal and other civil services. The accused were found guilty and were ordered to pay a nominal fine, and the General Federation of Labour was ordered to be dissolved. It is stated, however, that effective dissolution of the Federation is not possible under existing laws. It is understood that there will be an appeal.

Compulsory Labour Law of Bulgaria

An Act providing for universal compulsory labour came into force in Bulgaria last June. The law has for its objects: (1) The increase of production and the hastening of the economic reconstruction of the country; (2) the provision of modern physical and intellectual education for young men and women; (3) the encouragement among the Bulgarian people of an interest in the welfare of the country and the development of a spirit of co-operation and mutual help; and (4) the creation of a new source of profit for the State. All Bulgarian citizens, with certain exceptions, are liable to compulsory labour service, men who have reached 20 years of age serving for twelve months, and girls of sixteen years serving for six months. In the event of great national emergencies all males between 20 and 50 years of age and young persons under 20 years may

be called up by the Council of Ministers for temporary compulsory labour service for not more than four weeks. It is proposed to utilize this labour in the construction of public works, the laying out of villages and towns, forestry, cultivation of public lands, fruit and vegetable growing, fishing, mining, manufacture of cloth, linen and clothing in hospitals, etc. The Act is administered by a general director through a Central Office in the Ministry of Public Works, Communications and Welfare. A Superior Council is also established in connection with the Central Office consisting of the director and the general secretaries of the Ministry. Special district offices, with the communal administrative authorities as executives, will conduct the business of calling up the persons liable for compulsory labour service, their classifications and employment. In connection with each district office there will be a compulsory labour service council consisting of the prefects, the district engineer and various other district officers, which shall decide on all questions respecting the activities of the compulsory labour services in the district. The Central Office shall open such technical and industrial classes, schools and workshops, model farms, etc., as are required to prepare the workers of the different classes for their tasks. Attendance at these schools will be compulsory for the first part of the period of service. Any person who is exempted from service on account of physical unfitness or disease is liable to a special tax proportionate to his income and property.

Mortality in Russia

The following note appears in the November 11, 1920, issue of the journal *Volia Rossii* of Prague, being the leading Socialist newspaper in that district: "Mortality in Russia, 1911 to 1920, has increased from 21 per thousand, to 75; birth rate decreased from 20 per thousand to 13; during August, September and October, 1920, 13,855 persons were shot; there is no free speech; strikes are not permitted; in-

dustrial output is one-fifth of normal." The leading Bolshevik journal, the *Moskovskia Izvestia*, under date of October 17, 1920, reports 1,206 executions during September, of which 481 were for military offences and 335 for political offences. Of the latter number 185 were for treason.

Jottings

The Ontario Minimum Wage Board recently adopted regulations which have been approved by the provincial government. These regulations require all employers of female labour to keep a complete record of the names of workers and of the wages paid, such records to be kept open at all times to inspection by the Board. Provision is also made for the payment by special permission of lower wages than the standard minimum in the case of handicapped workers, part time workers, apprentices, etc. The Board has begun an investigation of women's wages in laundries and dye works in the province.

In order that the allowances made by the Mothers' Allowances Commission of Ontario may be able to provide a comfortable standard of living for the beneficiaries, the Commission has requested each of the 90 local boards throughout the province to furnish detailed information of the cost of living for various sized families in each locality. The details asked for are cost of food, fuel, clothing, rent or taxes and upkeep, fuel and light, recreation, medical attention, education, etc.

A delegation of the Building Trades Council of Toronto interviewed the Ontario government on January 11. They requested that the Factories Act be amended to compel the installation of proper safety devices on all elevators in buildings; that the workmen's compensation scale of payment to injured men be increased from 66 2-3 per cent to 100 per cent; and that the increased compensation allowances provided at

the last session of the legislature be made retroactive to include non-fatal cases prior to July 1. They also suggested that work be commenced at once on the administrative building to be erected in Queen's Park, Toronto, to provide work for the unemployed.

The convention of the United Mine Workers of America, District 26, scheduled to take place at New Glasgow, N.S., on February 15, has been postponed until a later date.

At a convention of Master Mariners, Pilots and Navigators, held at Ottawa in January last, a purely Canadian association was formed from the five or six associations now in existence in Canada. This new association will not affiliate with any labour union or other body. A deputation from the convention waited on the Deputy Minister of Marine and Fisheries, and requested that changes be made in the Merchant Shipping Act to provide for a Plimsoll mark for Canada the same as in Great Britain, for raising the standard of the examination for masters and mates, and for a simplification of the classification, and for allowing only British subjects who have the franchise to hold certificates.

At a convention of the British Columbia Coast Loggers' Association held in January it was decided to withdraw from the One Big Union and to carry on their own industrial organization independently.

A conference was held at Calgary on January 8, between the mayors of the Alberta cities, for the purpose of discussing questions pertaining to the civic service and to arrange a uniform schedule of civic wages. No definite decision was arrived at regarding the wages, but it was decided that Calgary and Edmonton should consult each other in regard to any future increases in wages. The Edmonton authorities wanted a by-law fixing wages. A probable federation of civic unions of the cities of the province was spoken of at the meeting.

The annual output of coal in the province of Alberta during the past five years was as follows: 1916,—4,648,604 tons; 1917,—4,683,414 tons; 1918, 6,148,620 tons; 1919,—5,022,412 tons; 1920,—6,908,507 tons.

Under a profit-sharing scheme adopted a year ago by the John Morrow Screw and Nut Company, Ingersoll, Ontario, the employees of the company during the first eleven months participated in profits to the extent of 22½ per cent of their wages. The distribution at the close of the year is estimated at \$77,000. The scheme was adopted to secure increased production, and to make possible a basis for a fair division of the earnings of the company's plants. It has been decided to continue this scheme during the present year.

A delegation of teachers waited upon the provincial government of New Brunswick on January 5, and requested an increase in the maximum amount of teachers' pensions from \$400 to \$800, and the raising of the minimum from \$125 to \$250, the teachers offering to co-operate in the provision of the increase by contributing four per cent of the annual grant from the government toward their salaries.

On January 31, the Atlantic Underwear Company, of Moncton, N.B., opened a modern apartment house to accommodate one hundred of their female operatives, providing sanitary rooms, good meals, and homelike surroundings at a nominal cost.

According to the annual report of the Chief of the Children's Bureau of the United States Department of Labour, 40 out of the 48 states have now some form of mothers' pensions.

The South African government recently appointed a commission to inquire into the prevalence of unemployment, with special reference to the migration of workers from farms to the

towns, and to the possibility of establishing a system of insurance against unemployment.

At the third annual Congress of the Pan-American Federation of Labour, which met at Mexico City on January 10, a resolution was adopted favouring the establishment of agencies in all Latin-American countries for the collection and dissemination of information regarding labour conditions. Mr. Samuel Gompers was re-elected president of the Congress. The next session of the Congress will be held at Guatemala City.

The United States Steel Corporation reports an expenditure of \$81,162,943 for safety, sanitation and welfare during the period January 1, 1912, to September, 30, 1920.

Silk and ribbon workers of Paterson, N. J., have asked the city to appoint a board of arbitration for the entire industrial community of Paterson, to be composed of two representatives each of the clergy, the merchants, the manufacturers, and organized labour. The resolution mentions the chaotic conditions that existed in 1913, which, the workers assert, could have been averted by an impartial arbitration board.

Two prizes have been awarded in connection with the Economic Essay Contest of 1920, conducted by Messrs. Hart, Schaffner and Marx, a Chicago firm. In Class A a second prize of \$500 was awarded to Frank D. Graham, Ph. D., Assistant Professor of Economics of Dartmouth College for a study on "International Trade of the United States in the Greenback Period." In Class B, the second prize of \$200 was equally divided between two undergraduates—Henry Dunster Costigan, of Harvard University, for a study on "Nationalization of Collective Bargaining in the Men's Clothing Industry," and C. T. Steward, of Indiana University, for a study on the "Causes of the Recent Rise in the Price of Silver."

The Chamber of Labour, Turin, Italy, has passed a resolution asking all industries to diminish their working time 20 per cent, or from eight to six hours, instead of dismissing 20 per cent

of their workmen. The League of Industrials, while they do not think the measure can be applied generally, has declared itself ready to negotiate with representatives of the workmen.

INDUSTRIAL CONDITIONS DURING JANUARY, 1921

I.—General Review

The general decline noted in December in the average volume of employment throughout Canada continued in the first week of January, the losses in the opening days of the month being specially heavy in the province of Quebec. In the second week, however, a fairly strong recovery from the holiday and stocktaking period was evident in all provinces with the exception of Nova Scotia, Prince Edward Island and Alberta, the upward movement continuing on into the third week in Quebec, Ontario, and Manitoba. In the closing week of the month conditions continued fairly steady, though with a slightly downward tendency.

In the Metals, Machinery and Conveyances group of trades some gains over the previous week were recorded in iron and steel fabrication, and in the crude, rolled, forged and sheet metal divisions; in Nova Scotia, however, these industries continued to show losses resulting from local causes; improvement was evident also in employment in the railway car shops and iron shipyards, and in brass, bronze and copper production. In the Food, Drink and Tobacco group some gains were recorded in sugar refining; abattoirs and meat packing plants showed a decline in the eastern provinces, but some gains in the Prairie provinces; confectionery and biscuit makers experienced the

usual reaction following the holiday season, but conditions improved later in the month; the flour milling industry was rather more active in Quebec and Ontario, but cereal factories were generally less active; the tobacco industry made marked gains during the month. Recovery after the holiday season was noted in the Textile and Clothing groups, especially in the thread, yarn, cloth, garment, hosiery and knitted goods factories; the boot and shoe trade showed some losses early in the month in Quebec, but these were offset later by gains. The Pulp and Paper mills in the Maritime Provinces and Quebec showed heavy declines, due largely to the seasonal overhauling of plants, but those of Ontario and British Columbia continued fairly steady. The Printing and Publishing trades experienced a reaction after the holiday season, but recovered somewhat before the close of the month. In the Woodworking industries, the sash, door and planing mills were beginning to show activity in anticipation of the coming building season, but furniture factories were rather quiet. Building construction was generally at a standstill; municipalities gave considerable employment by starting improvements in advance of the usual season. Transportation showed a general slackness in all departments. Declines were also noted in the Mining and Quarrying divisions. Sawmills continued to experience the usual seasonal slackness, but Logging was rather more active except in British Columbia where the industry continued depressed.

The loss of time on account of industrial disputes was greater than during

December, 1920, but less

Strikes

than in January, 1920.

There were in existence at some time or other during the month 10 strikes, involving about 964 workpeople and resulting in a time loss of 15,951 working days, as compared with 10 strikes, 1,554 workpeople and 14,654 working days in December, 1920; and 35 strikes, 2,800 workpeople and 35,535 working days in January, 1920. On January 1, there were on record 4 strikes, affecting 404 workpeople. Six strikes were reported as having commenced during January, as compared with 3 in December, 1920. One of the strikes commencing prior to January and four of the disputes commencing during January were reported terminated, leaving

5 strikes, involving 384 workpeople on record at the end of the month.

The movement in prices continued downward, declines appearing in almost all lines, the most important being in grain and textiles. In fuel

Prices

the only decrease of importance was in furnace and foundry coke. In the retail prices of foods there were decreases in nearly all of the staple lines. The index number of wholesale prices was down to 281.3 for January as compared with 290.5 for December, 336.4 for January, 1920, 286.5 for January, 1919, and 136.5 in January, 1914. In retail prices the average cost of a list of twenty-nine staple foods at the beginning of January was \$14.48 as compared with \$14.84 at the middle of December, \$15.30 in January, 1920, and \$7.73 in January, 1914.

II.—Industries and Trades.

The steel industry of Nova Scotia continued to be very quiet during

Metals and machinery

January owing to the continued strike of the railway employees of the steel companies.

SYDNEY reported the production of the local plants as follows: pig iron 9,700 tons; ingots, 14,300 tons; blooms, 10,000 tons; rods, 1,513 tons; plates 3,575 tons; wire, 100 tons; nails, 1,450 tons; one blast furnace was in operation; the stove and furnace plants were quiet, the foundries being shut down for repairs; metal roofing factories were less active; mechanics in the machine shops at GLACE BAY worked five days a week. No production was reported from the steel and iron works at SYDNEY MINES. At HALIFAX quiet conditions were reported in the factories for bolts, bars, etc., some men being laid off in the skate department; portable steam engine and boiler plants were also rather quiet, though in some there was enough work in hand to em-

ploy staffs for several weeks; the stove foundry was steadily employed in making up stock. The rolling mills at ST. JOHN ran full time, but slackness was noted in the galvanized iron, tin and sheet metal plants. At AMHERST the two rolling mills shut down indefinitely; iron foundries were working from three to five days a week; machine and boiler shops were on four days a week schedule, with probability of shutting down. At CHARLOTTETOWN metal workers had a quiet month. At MONCTON one foundry and machine shop closed down for repairs and stocktaking, only operating the stove department. The machine shops and foundries at FREDERICTON were fairly active. MONTREAL reported quiet conditions in the structural steel and sheet metal plants; engine and boiler shops were also quiet, but the electrical trade was fairly well employed. At QUEBEC very slack conditions were reported in the architectural iron and steel, stationary and portable engine, stove and metal roofing in-

dustries. SHERBROOKE reported that the stationary and portable engine and boiler shops were quiet, but the structural iron and steel works were fairly active. At St. HYACINTHE the iron-working and machine shops were active, with experienced moulders in some demand. A large number of employees were laid off at St. JOHN'S and IBERVILLE at the sewing machine factory, while those employed worked part time; the iron trades were very quiet. At THREE RIVERS the iron foundries were only partly active, about one-fifth of the regular staff being employed. Machinists, pattern makers and moulders at SOREL were idle for most of the month, but electricians and blacksmiths were well employed. At OTTAWA and HULL all foundries and machine shops had a quiet month, though some were kept busy stocktaking; one firm expected to close down shortly. At TORONTO the metal and machinery industries were generally much depressed, with many plants closed down and others working much below capacity. A slight improvement was noted in the metals group at HAMILTON, though machinists continued slack, with a large number out of work, and the stove and furnace industry was quiet; the farm implement, bridge building, structural steel and brass goods plants were fairly active. NIAGARA FALLS reported a marked fall in employment in the metal-working group; the can and chain factories were practically shut down and the plating and cutlery companies laid off some workers. At WELLAND 200 men were laid off at the steel foundries. The metal trades at St. CATHARINES mostly continued quiet, but boiler makers and electrical workers were well employed. At BROCKVILLE the stove and furnace plants were very quiet; the hardware factory began running four days a week before the close of the month. The cutlery plant at KINGSTON closed down for a few weeks, throwing about 20 employees out of work. BELLEVILLE reported fairly active conditions in the portable engine, boiler and lock plants. At PETERBOROUGH the iron foundries were quiet; at one plant about one-

third of the moulders were engaged; machinists were fairly busy, though a number were unemployed, many of them, however, being from points outside the city; the electrical plant was active, with overtime work in the transformer department. At BRANTFORD the engine and machinery factory was very busy; malleable iron and farm implement workers were fairly well employed; electrical machinery plants were fairly active, though running with reduced staffs; the stove and furnace factory which was closed for some time, was preparing to reopen. KITCHENER reported full time work in the electrical fixture and fibre plants; foundries and machine shops were on short time, some working only four days a week; metal workers and tinsmiths were fairly active, but farm implement, thresher and portable and stationary engine factories were quiet; the clock industry was dull; patternmakers and gasoline pump and engine workers had a fair month. At STRATFORD the metal trades had a fairly active month; electrical workers were busy, but farm implements plants were quiet. The foundry at WOODSTOCK ran four days a week, but without reduction in staff, the stove and furnace industry being quieter than usual. At LONDON the rolling mills worked all month at full capacity; the wire, iron, tin and enamel works were also busy, but stationary engine and boiler shops were slack, a number of men being laid off, and others working short time; the stove and furnace factory which had been closed for three weeks reopened at the middle of the month. At St. THOMAS the iron foundries were slack laying off workers, or shortening hours. The metal working industries at GUELPH closed for stocktaking at the new year but reopened about the middle of the month, working mostly three or four days a week; some iron foundries and the gasoline engine factory ran full time. At WINDSOR the stove foundries ran on short time; machine shops were all quieter than during the past year, owing to slackness in the automobile trade; the injector factory was busy on large overseas orders and took on extra help.

The bridge and trussed steel works at WALKERVILLE were increasingly active, nearly all the men laid off for the holiday season being taken back. About 50 men were thrown out of work on the assignment of the twist drill and gas engine company at SANDWICH, but most of them secured employment in the motor industry. At CHATHAM the structural steel industry was active; the farm implement factory started running a four day week. OWEN SOUND reported some slackness in the malleable iron foundries; machinists and stove and furnace workers were fairly active, and the bolt and screw works were busy. At ORILLIA the farm implement, stove and machinery factories retained their normal staffs. SAULT STE. MARIE reported a resumption of activity at the steel plant, the men working at reduced wages pending decision by a conciliation board. WINNIPEG reported the metal trades quiet in all departments. At BRANDON farm implement and machine shops had a very quiet month. Slack conditions also prevailed at REGINA. The iron works at LETHBRIDGE were rather quiet. Foundries and sheet metal works at EDMONTON were fairly active. At VANCOUVER the rolling mills, structural steel, electrical apparatus and fixture, stove and furnace, and sheet metal factories were all slack; stationary and portable engine plants were moderately active. The engineering shops at NEW WESTMINSTER laid off a number of unskilled men; sheet metal and electrical workers were fairly well employed. At VICTORIA iron and stove foundries were active and electrical apparatus and repair workers fairly well employed. Sheet metal and electrical workers at PRINCE RUPERT had a quiet month.

The railway repair shops at SYDNEY were less active in January. At HALIFAX shipyard workers were steadily employed, one ship being under construction, with some repair work on hand. At AMHERST the car shops were active in every department except the rolling mills. CHAR-

LOTTETOWN reported a reduction of working hours in the railway shops on January 22 from 44 to 40. In the locomotive and car repair shops at MONCTON employment was steady with a 40-hour week, but in some departments night shifts were worked. At MONTREAL the shipyards were quiet; railway repair shops were fairly active. At QUEBEC the locomotive and car shops were quiet; the repair shops of the Transcontinental railway at St. Malo reopened on January 3, employing 800 men; boat and shipbuilding and repairing in the Levis docks was very quiet, but work commenced at the Louise Basin on the Federal Government boats, this work being started a month before the usual time in order to relieve unemployment. The railway repair shops at SHERBROOKE were fairly active. At THREE RIVERS the shipbuilding yards were almost idle, a small percentage of the usual staff being employed. OTTAWA and HULL reported considerable activity in the carriage building department of the car shops, several additional carpenters being taken on. At SOREL over 240 men were laid off at the Government shipyard only about 100 being retained. At TORONTO the railway repair shops were quiet and the automobile industry continued slack. HAMILTON reported the car, wheel and parts shops fairly active. At BROCKVILLE the motor car, truck, sleigh and wagon factories ran with reduced staffs; the engine factory was also running, but the motor boat department was quiet. Owing to lack of orders a number of men were laid off at the locomotive works at KINGSTON; at the shipyard much repair work was in progress, and some men who had been laid off were taken back to work. The staff was mostly laid off in the Grand Trunk car repair shops at BROCKVILLE. Automobile and carriage plants at BELLEVILLE were fairly active throughout the month. BRANTFORD reported activity in the carriage and wagon factories. At KITCHENER the auto truck and bicycle industries were slack. The Grand Trunk railway shops at STRATFORD were fairly active. At

Vehicles (land and water)

WOODSTOCK the wagon and sleigh factories were busy, with good prospects for the balance of winter. At LONDON over 120 more men were laid off at the railway car shops; the assembling plant of the Ford Motor factory was again in operation and the new motor truck factory was ready to start work. Further large reductions were made during the month in the railway shops at ST. THOMAS, the lay-offs being said to be the result of orders for general retrenchment; the Père Marquette and Michigan Central shops were practically closed, though there was stated to be plenty of work for shopmen. At WINDSOR the motor industry showed some recovery in the second half of the month; the Ford factory ran 4 days a week, but was expected to run full time shortly; the wheel and axle works reopened after two weeks' lay-off, with three-fourths of their former staff engaged. CHATHAM reported conditions in the automobile industry continuing very quiet; the wheel factory remained closed, and the spring and axle plant was on short time. At ORILLIA the carriage factory was still practically shut down, but in the wagon shop the normal staff was engaged. In the shipyard at PORT ARTHUR the workers were put on a 5-day week of 8 hours a day. At WINNIPEG all railroad shops were placed upon a 40-hour week by arrangement between the various organizations and the companies; automobile repair shops had a quiet month. At VANCOUVER the boat and shipbuilding industry improved about the middle of the month, one yard reopening and starting work on two new steel boats for the Dominion Government; the other iron shipyard worked steadily, but very little work was done in the small wooden boat yards; automobile, carriage and motor engine plants were quiet; railway repair shops were also slack. VICTORIA reported slackness in the wooden shipyards, about 300 men being laid off temporarily, but iron ship builders were active; railway repair shops were fairly busy. About 100 men were taken on during the month at the shipyards at PRINCE RUPERT.

At SYDNEY continued activity was noted during January in all branches of the food group excepting the aerated water industry which everywhere shared in the usual seasonal depression. At HALIFAX abattoirs and meat packing houses were very quiet and bakeries and confectionery plants were below normal; the sugar refinery at WOODSIDE resumed operations after two months' idleness. The milk factory at TRURO closed for a two-month period, but other arrangements were made for the disposal of the milk supply so that the farmers might not suffer. CHARLOTTETOWN reported some slackness in the confectionery trade; abattoirs and meat packing houses were fairly active in the first part of the month; milk factories were adversely affected by the cold weather; flour mills had a good month, and tobacco workers were fairly well employed; during the past year 3,800 men and 890 women were reported to be employed in the fisheries of Prince Edward Island, lobsters being the most valuable of the products. At ST. JOHN the flour and feed mills were busy; the sugar refinery worked with reduced staff; bakers, confectioners and brewery workers were quiet, but creamery and dairy workers were well employed. The staff was reduced in the biscuit factory at MONCTON, about 150 workers being retained, but this number was expected to be increased shortly; bakeries were active, but butter factories were quiet. At FREDERICTON activity was noted in the bakeries, creameries and flour mills. MONTREAL reported quiet conditions in the flour and feed mills, abattoirs and packing houses; bakers, confectionery and brewery workers were fairly active; the tobacco industry showed some recovery after the first week. At QUEBEC abattoirs, packing houses, bakeries, confectionery plants and breweries were all quiet. Fair conditions were reported at SHERBROOKE in the abattoirs, packing houses, breweries, bakeries and confectionery plants; the creameries were quiet. At ST. HYACINTHE the flour mills worked full

time; bakeries were active; cigar and tobacco factories resumed operations. Bakers and confectioners at THREE RIVERS were fairly busy, but less so than a year ago; brewery workers were fairly well employed. At OTTAWA and HULL shipments to abattoirs were meagre owing to market conditions; dairies had an average month, though in some quarters many of the unemployed were obliged to dispense with milk, thus lessening the demand for that product; confectionery plants had a dull month. At TORONTO flour, feed and cereal production was steady; abattoirs and meat packing houses had little work on hand; bakers had plenty of work, but confectioners were less active than in December; biscuit factories were busy in the soda department; fruit canneries were more active after the middle of the month in some departments and took on extra female help; cigar makers had a fair amount of employment. At HAMILTON flour and feed mills, meat packing plants and bakeries were fairly busy and breweries were active. NIAGARA FALLS reported busy conditions at the shredded wheat factory and in the bakeries. The flour, feed and cereal product mills at St. CATHARINES had a good month. At BROCKVILLE the flour and feed mills were more active owing to reduced grain prices; bakers and confectioners were fairly busy, a new plant opening during the month; creameries were some what affected by a shortage of milk supply; cigar makers were moderately busy. The biscuit factory at KINGSTON reopened early in the month after stock-taking; the cigar factory also resumed work taking back all its former employees. At BELLEVILLE the flour and feed mills, bakeries, confectionery plants and creameries had a fairly good month. The flour and feed mills at PETERBOROUGH were very slack; one cereal plant laid off 200 workers in the first week, one-third of this number being girls and boys; the meat packing plant was rather busier than in the preceding month. At BRANTFORD also packers were fairly well employed; bakeries and confectionery plants and

creameries continued steadily; the preserving factory was practically idle. The sugar refinery at KITCHENER continued to run double shifts, the beet supply still continuing; moderately fair conditions prevailed in the flour and feed mills, sausage factories, abattoirs, bakeries and creameries; the candy factories ran four days a week; the cigar industry was dull; the brewery at WATERLOO was rather quiet. The flour and feed mills at STRATFORD shut down towards the end of the month; other trades in the food group were well employed. At LONDON the flour mills were slack; the corn flake factory ran at about half its summer capacity; the candy and biscuit plants which had been closed for two weeks, resumed work, running on short time with reduced staffs; the cigar trade was very quiet. GUELPH reported dullness in the flour mills, but the feed mills were active, bakers and confectioners were fairly well employed. At CHATHAM the flour and feed plants closed down; the sugar refinery concluded its work on the beet crop and also closed down; the abattoirs ran steadily with a full crew; bakers and confectioners had a good season; cigar makers were quiet. Additional help was taken on in the bakery department of the cereal plant at WINDSOR; all bakeries were busy; brewery and distillery workers had steady employment. OWEN SOUND reported normal conditions among mill workers; the cereal factory was specially busy; creameries and tobacco factories were quiet. At WINNIPEG confectioners were very dull, working only about half staffs after the Christmas rush, a number being on short time; bakers also were quiet; brewery and soft drink workers were steadily employed; abattoirs and meat-packing houses were fairly quiet with some improvement evident as the month closed; vegetable canneries were fairly active without change in number of staffs. At BRANDON flour mills and bakeries were busy, but other trades in the food group were dull. The flour mills at LETHBRIDGE worked on short time, lack of orders being the cause; brewery workers were on full time.

CALGARY reported general slackness among workers in the food industries. The biscuit factory at EDMONTON was fairly active. At FERNIE the bakers and confectioners were less active than in the preceding month, dairies were busy and breweries were active though usually quiet at this season. VANCOUVER reported fair activity in the flour feed and cereal product mills and among bakers and confectioners; abattoirs and meat packing houses were rather quiet; fruit and vegetable canners were idle; creameries and breweries had a busy month. At NEW WESTMINSTER abattoirs and packing houses were normally active, and brewery workers were well employed. At VICTORIA the cereal and feed mills, bakeries creameries and breweries were reported active, but fruit and vegetable canneries and cigar factories were quiet.

The rope and twine works at HALIFAX operated only four days a week. The woollen mill at AMHERST remained shut down for repairs. At TRURO the woollen mills worked 6 hours a day owing to lack of orders. Short hours were worked also at ST. JOHN, wages being reduced. At MONCTON the woollen mills operated steadily; the underwear factory ran with reduced staff. The cotton mill at FREDERICTON ran only four days a week. At MONTREAL the woollen and knitting factories were fairly active, but tent and sail workers were quiet. QUEBEC reported the cotton mills working with full staffs, but on short time, owing to shortage of water power. At SHERBROOKE fairly active conditions were reported in the cotton, woollen, hosiery, underwear and knitted goods factories and in the bleaching, dyeing, finishing and printing textile plants. The woollen and cotton, knitting and underwear factories at ST. HYACINTHE worked with reduced staffs in some departments; the cotton factory, which was lately shut down, still remained closed. The cotton factory at THREE RIVERS worked with only half its regular em-

ployees engaged. The textile industries at TORONTO were somewhat unsettled owing, it was said, to price readjustments; the woollen mills were slack, orders coming in slowly; the knitted goods and hosiery trades showed improvement, though conditions varied in the several plants; hosiery factories were fairly active; tent, awning and sail factories were quiet and carpet weavers were on short time. Short time was also worked in the knitting, hosiery and cotton mills at HAMILTON. The tent and awning factories at BROCKVILLE were fairly active. Carpet weavers at PETERBOROUGH were very quiet; the woollen mills employed only sufficient workers to keep the plant running. Similar conditions were noted in the woollen mills at BRANTFORD; hosiery, underwear and silk workers were fairly well employed; the cordage factory was very busy, running to capacity. Fairly good employment was reported at KITCHENER in the knitting and twine factories, but the felt factory was quiet. The cotton and woollen spinning mills at GUELPH ran 4 days a week; hosiery and knitted goods mills were fairly active, but linen mills were quiet; carpet and rug weavers were employed only 4 days a week. At STRATFORD the hosiery and knitting mills closed during the month, but the woollen mills retained their usual staffs. The textile and knitting factories at WOODSTOCK continued running, with female labour in demand in some lines. At LONDON the woollen underwear industry was slack; the hosiery factories after closing for a time resumed running on short hours. At ST. THOMAS, the knitting factory, which employs many women, was fairly busy; shoe factories were fairly active. The woollen mills at CHATHAM closed down during the month; other textile operatives and pad workers were steadily employed. At OWEN SOUND the textile plants which were closed for a time resumed operations during the month. The woollen factory at ORILLIA worked to capacity with full staff. Jute and bag factories at WINNIPEG ran with staffs somewhat reduced; the knitting factory

**Textiles,
cordage and
carpets**

had a quiet month, some workers being laid off; the tent and awning trade was very dull. At VANCOUVER slack conditions were reported in the knitted goods, tent, awning and sail factories. The cordage factory at NEW WESTMINSTER employed about 20 men.

SYDNEY reported continued activity in the steam laundries. Ready made

Clothing, clothing workers at HALIFAX experienced
boots, shoes seasonal slackness; steam
and laundering laundries were less than normally active, but

staffs were not reduced. Boot and shoe workers at AMHERST were on part time, some being laid off. At TRURO owing to lack of orders, the hat, cap and shirt factories worked a 6-hour instead of a 9½ hour shift. CHARLOTTETOWN reported dull conditions among garment makers and tailors; boot and shoe workers were normally active; steam laundries were busy, but dyeing plants were quiet. Laundries at ST. JOHN continued busy in connection with ocean liners. Steam laundries at MONCTON and FREDERICTON were very busy and clothing workers were well employed; at the latter point the shoe and larrigan factory gave little employment. At MONTREAL the ready-made clothing factories were increasingly active; hat, cap and laundry workers had a fair month; the boot and shoe industry was more active, one large factory reopening at the middle of the month with about 400 men and women employed. Ready-made clothing factories at QUEBEC were quiet, several closing down or working short time and only one working steadily; similar slackness was noted in the hat and cap factory; steam laundries were quiet; boot and shoe factories worked full time only two or three days a week, though normally this was their busiest season. At QUEBEC the ready-made clothing factories, steam laundries and dyeing plants were fairly active. Ready-made clothing plants at ST. HYACINTHE worked with reduced staffs, but with prospects of improvement; boot and shoe makers worked only 4 days, or less

in some departments. Steam laundries and cleaning plants at THREE RIVERS were fairly active; boot and shoe factories were closed for the first part of the month, resuming work later with reduced staffs. The shirt, collar and cuff factory at ST. JOHN'S and IBERVILLE reduced the number of its employees during the month; fur workers had a quiet month. The clothing factories at OTTAWA and HULL were slack; laundries were also quiet, one plant working only 35 hours a week; the boot and shoe trade had a dull month. Garment workers at TORONTO were better employed than in the preceding month, working forces being increased in view of the approach of the spring season, with female workers in demand; men's clothing factories continued quiet, many being shut down indefinitely; the glove industry was slack, one firm closing for 3 weeks; laundries and cleaning plants were fairly active; the boot and shoe industry continued quiet. At HAMILTON short time was worked in the ready-made clothing plants; whitewear workers were fairly active. The clothing industries at NIAGARA FALLS were quiet; laundries were busy. Rubber footwear workers in ST. CATHARINES were well employed. At BROCKVILLE the hat factory ran with reduced staff; glove and fur workers were quiet. The textile factory at KINGSTON was again on full time after running a 4-day week during the holidays; 215 workers were employed at this plant. BELLEVILLE reported fair activity in the shirt factory. Boot and shoe workers at PETERBOROUGH were quiet. The dress factory at BRANTFORD operated with about half its regular staff, the overall and shirt factory after having been closed for a month, resumed work with reduced staff; at the shoe factory also the number of workers was reduced. Dull conditions were noted at KITCHENER in the robe and clothing, shirt, collar, button and glove factories; the women's house dress factory resumed operations after a shut-down lasting a month; laundries were fairly active; some boot and shoe factories were fairly

active, but others were very slack; felt shoe, slipper and canvas factories were fairly active; the rubber shoe plants were both very slack. STRATFORD reported considerable unemployment in the clothing factories, but laundries continued busy. Hat makers and women's whitewear workers at GUELPH had a quiet month. Ready-to-wear clothing workers at LONDON were very quiet, many being laid off, and piece rates being reduced; the cap trade was slack, and the fur workers had less employment; dyeing and cleaning plants were not very busy; the shoe factories ran on short time with reduced help. Some additional machine hands were taken on at WINDSOR in the shirt factory; both button factories worked only half-time; laundries worked full time, but dry cleaning plants were nearly all closed for the month. At WINNIPEG steam laundries and cleaning plants continued fairly active with staffs unchanged; ready-to-wear plants were quiet, working half staffs, with hours reduced; shirt factories were very dull; glove factories employed less than half their usual employees. Laundries at CALGARY were normally active. At VANCOUVER slack conditions were noted in the ready-made clothing, and women's whitewear factories, laundries and cleaning plants; boots and shoe workers were fairly busy. VICTORIA reported the shirt and overall factories moderately active; laundries and dyeing plants worked steadily.

The felt and tarred paper industry at HALIFAX was normally active. The pulp and paper industry in the Maritime Provinces showed a marked depression of activity during January. The mills at ST. JOHN continued running steadily, the staff being only slightly reduced, but extensive reductions were reported at LIVERPOOL and MURRAY, in Nova Scotia, and at BATHURST and CHATHAM in New Brunswick. In the Province of Quebec an increase in the number of employees was reported at the pulp mills at CHANDLER and fairly steady

conditions were maintained at WINDSOR MILLS, DONNAcona, LA TUQUE and BAGOTVILLE, but considerable reductions were made in the staffs at THREE RIVERS, HULL, SHAWINIGAN FALLS, CAP MAGDELAINE, CHICOUTIMI, EAST ANGUS and KENOGAMI. In the pulp and paper mills of Ontario increases over the previous month were shown in the numbers employed at OTTAWA, IROQUOIS FALLS, STURGEON FALLS, THOROLD, HAWKESBURY, and SMOOTH ROCK FALLS; staffs at TORONTO and ST. CATHARINES were maintained without much change; while some declines were noted at CORNWALL, SAULT STE. MARIE and ESPANOLA. At the provincial pulp and paper mills at PORT ARTHUR the whole staff was laid off temporarily pending alterations in plant. The roofing plant at BRANTFORD was slack, but the staff was retained for repair work. VANCOUVER reported continued activity in the pulp and paper mills at OCEAN FALLS and POWELL RIVER. At VICTORIA the rubber roofing, felt and tarred paper plants were active, chiefly on foreign orders.

The printing and publishing trades at HALIFAX and TRURO had a quiet month,

**Printing,
publishing
and paper
goods**

but active conditions were reported from AMHERST and CHARLOTTETOWN. The job printing shops and binding plants at ST. JOHN were somewhat slack; the paper box industry showed some revival during the month. MONCTON and FREDERICTON reported steady activity throughout the group. MONTREAL reported fair activity in the printing, book-binding and lithographing trades. At QUEBEC the printing trade was busy on advertising work, while paper box workers were slack. Normal activity was reported in the printing and allied trades at SHERBROOKE, ST. HYACINTHE, and THREE RIVERS. At OTTAWA and HULL printers and publishers had a slack month with little activity in any department. Printers, bookbinders and allied trades at TORONTO were fairly active, but the paper bag and box industry was quiet.

**Pulp, paper
and fibre**

Fair activity was noted at HAMILTON, NIAGARA FALLS, ST. CATHARINES, BROCKVILLE, KINGSTON and BELLEVILLE. At PETERBOROUGH newspaper and job printers were busy. KITCHENER reported slackness in the job printing offices, but fair activity was noted in other departments, including the box factory. Employment was good in the printing and allied trades at GUELPH and STRATFORD. At LONDON the newspapers laid off a number of their employees at the close of the holiday season and did not take them back during January; job plants were slack early in the month, but improved later; the paper box factory shut down for a time, but afterwards restarted with reduced staff. At WINDSOR a morning paper ceased publication in the first week of the month, but all employees were retained for work on the evening edition; job printers and box makers were very quiet. Printing and allied trades were active at OWEN SOUND and ORILLIA. At WINNIPEG all branches of the printing trade experienced a very quiet month, a number of printers being without employment; paper box factories continued with reduced staffs throughout the month; bookbinders were busy with staffs practically unchanged. Printers were fairly active at BRANDON, CALGARY and EDMONTON. At VANCOUVER newspaper printers were fairly busy; job offices were busy except during a two-weeks' industrial dispute; binderies had an active month. At NEW WESTMINSTER printers were busy and at VICTORIA also conditions were good in all branches of printing, but paper box factories were quiet. PRINCE RUPERT reported some slackness among newspaper and job printers.

The sash and door factories and planing mills at SYDNEY continued to run steadily. At HA-

Woodworking and furniture

LIFAX the planing mills, wooden box and cooper-age factories were all quiet. Woodworking factories at AMHERST were still active, but with little fresh demand for their products. The mattress factory at TRURO ran full

time. The sash, door and planing mills at CHARLOTTETOWN had a dull month, but broom makers and coopers were fairly busy. The planing mills and broom and brush factories at ST. JOHN continued active. At MONCTON about 40 workers were still employed at the woodworking plant, these being on reduced hours and wages; the cooperage plant also worked with reduced staffs. The sash, door and planing mills at FREDERICTON continued running on full time. At MONTREAL wooden box, furniture and piano workers had a quiet month. Dullness was noted at QUEBEC in the sash, door and planing mills and in the furniture and broom factories. Similar slackness was reported at SHERBROOKE in the mills and chair factories. At ST. HYACINTHE the sash and door factories continued active without reduction of hours; organ factory workers were busy, with good prospects of future employment. The planing mills at THREE RIVERS were active but not up to the level of the previous year. OTTAWA and HULL reported some improvement in the furniture industry; the piano and washing machine plants were quiet. At TORONTO the furniture, piano and phonograph trades were quiet. HAMILTON reported a considerable proportion of woodworkers out of employment, cabinet and box makers being specially slack. The woodworking trades at NIAGARA FALLS and ST. CATHARINES had a busy month. At BROCKVILLE the planing mills were quiet and the office furniture factory operated with a reduced staff. The piano factory at KINGSTON resumed operations during the month with about 20 employees working 3 days a week; other woodworkers were quiet, some running short time. The sash, door and planing mills at BELLEVILLE were fairly active considering the season, preparing for the spring demand for building purposes. PETERBOROUGH reported quiet conditions in the planing mills and wooden box factories. At BRANTFORD employment was good in the planing mills, but the piano case factory was quiet. KITCHENER reported fair activity in the

mills, cooperage and wooden box factories; some furniture factories were on short time, others shut down for part of the month, while two factories for interior hardwood work ran full time; broom, wooden ware and toy factories were dull; the piano and organ factory ran 4 days a week. At GUELPH the planing mills and sewing machine factory were quiet; piano makers worked 3 days a week. At STRATFORD the planing mills, sash, door and wooden box factories were rather quiet; furniture and chair factories were active. WOODSTOCK reported the furniture factories closed down temporarily; organ and piano plants were also very quiet, but one organ factory retained its staff and ran eight hours a day. At LONDON the planing mills had a busy month; the wooden box and barrel factories were slack, employees in the latter plants being laid off; piano workers were on short time. The sash, door and planing mills at WINDSOR were very busy on preparations for the coming building season; the piano factory ran steadily though with reduced staff. At OWEN SOUND woodworkers had a quiet month, furniture and chair factories practically shutting down, but improved conditions were looked for shortly. ORILLIA reported slackness in the planing mills, but with signs of increased activity; the furniture factory ran steadily with full staff. The sash and door factories at SAULT STE. MARIE showed some signs of increased activity. At WINNIPEG the planing mills and box factories continued quiet with their employees working on short time; sash and door factories were very quiet, though the usual staffs were maintained. The sash, door and planing mills at BRANDON were busy. At CALGARY the mills were very quiet, the largest mill closing down entirely for one week. Similar slackness was reported from FERNIE. At VANCOUVER the planing mills, sash, door and furniture factories had a quiet month. NEW WESTMINSTER reported dullness in the furniture industry. At VICTORIA the planing mills, box, sash and door factories were very quiet.

At HALIFAX the trunk, leather bag, and harness industries were very quiet, but staffs were retained. Trunk and bag workers at AMHERST were steadily employed. The tannery at ST. JOHN continued busy. At MONTREAL fair conditions were reported in the tanneries, trunk, bag, harness and rubber factories. Tanneries and trunk, bag and harness shops at QUEBEC were very quiet. The tannery at ST. HYACINTHE worked with reduced hours in some departments. Workers in leather goods at OTTAWA had a slack month. At TORONTO the trunk, harness and rubber industries continued quiet with a large proportion of former employees out of work. Trunk, leather goods and harness workers at HAMILTON and BROCKVILLE were quiet. The tannery at KINGSTON remained closed during the month. Leather workers at PETERBOROUGH had a quiet month. Tannery and harness workers at STRATFORD were slack. LONDON reported dull conditions among tannery and leather goods workers. The tanneries at OWEN SOUND were very quiet. The tannery at ORILLIA still continued running at full capacity. The tannery at BRANDON was fairly active, but other leather workers were quiet. CALGARY reported slackness in the trunk, bag, harness and horse goods plants.

At HALIFAX the window and plate glass industry was below normal activity, the impetus resulting from the explosion being about exhausted and pre-war conditions resumed.

**Clay, glass,
stone, cement,
etc.**

Marble and granite workers at AMHERST were steadily employed. ST. JOHN reported cut stone and granite work very quiet. The glass factories at MONTREAL operated steadily. At QUEBEC and SHERBROOKE the cut stone and brick industries were slack. At TORONTO the brickyards were being made ready to work at full capacity for the coming building season, one large plant being already in operation; the glass factories were not working. HA-

MILTON reported slackness throughout the group: the brickyards were closed for the season; sewer-pipe workers were fairly active, but many stone workers were unemployed. The glass and moulding factory at KINGSTON, which formerly employed about 80 workers, was still closed, but another moulding plant opened with a staff of eight. The cement plant near BELLEVILLE was very busy, running day and night. The brick and tile yards at STRATFORD had a quiet month. Stone cutters at LONDON continued in employment. Tile, sewer-pipe, cement and plaster workers at WINDSOR were busy in connection with new schools in course of construction.

SYDNEY reported some decline in activity in the chemical works. The oil refinery at HALIFAX took on some additional help for new process work, two new stills being under construction; the paint, oil and varnish trades were rather quiet, no new help being engaged. The paint and varnish industry at MONTREAL was rather quiet; chemical, drug and medicine plants were fairly active. At QUEBEC the cartdrige factory reopened, employing about 300 workers. SHERBROOKE reported dullness in the lubricating oil, grease and gunpowder plants. The paint mills near THREE RIVERS remained closed for most of the month. At TORONTO paint and varnish workers had fair employment. At HAMILTON the various chemical industries were slack. The electro-chemical plants at NIAGARA FALLS were busy, but the abrasive plant was shut down. Paint and varnish workers at BRANTFORD continued fully active. At KITCHENER the oil, grease and glue works were fairly busy. Several employees were laid off at the paint works at WINDSOR; the salt refinery continued running steadily with full staff; pharmaceutical plants ran short hours in order to obviate unemployment. The paint industry at OWEN SOUND was quiet. The chemical plant at TRAIL continued

normally active producing sulphuric and hydrofluorsilic acid. VANCOUVER reported the local oil refinery fairly busy; the paint and varnish industry was quiet. VICTORIA reported the paint and soap factories fairly active and the chemical and explosive plants in Vancouver Island as being moderately busy.

The gross earnings of the Canadian Pacific Railway in December were \$20,604,168, as compared with \$17,025,583 in December, 1919. The **Railway shipping and 'longshore work** gross earnings of the Canadian National Railways in January were \$8,781,839, as compared with \$7,267,562 in the corresponding period of last year. During January the number of persons employed by the Canadian Pacific, Grand Trunk and Canadian National Railways in railway operation including general offices, trainmen and engine crews, station employees, sleeping, dining and parlor-car employees, showed a reduction of about 2,000 persons; the total employees engaged in this capacity at the end of the month being 67,000 as compared with 69,000 at the end of December. This decrease was nearly all accounted for by the reductions in the staffs of the Canadian Pacific Railway.

Somewhat less activity was reported at SYDNEY in steam railways, in navigation and in transfers, but the street railways continued busy. HALIFAX reported railway traffic very light and 'longshore work very quiet. At TRURO trainmen worked five instead of six days a week, no overtime being allowed. CHARLOTTETOWN reported the dulllest month for years, in both freight and passenger traffic. Railwaymen at ST. JOHN had a quiet month, some men being laid off in the freight department of the Canadian National and a number of checkers reduced to the rank of freight handlers; navigation, including 'longshore work, was fairly active, many steamers being in port, but with light outward cargoes; transfers and garages were active. At MONCTON railway

operating crews were reduced owing to the decrease in freight movement. MONTREAL reported a decline in the volume of employment on railways. QUEBEC reported steam railways fairly busy, freight and passenger traffic being still heavy, and the heavy snowstorms tending to increase employment; street railways continued steadily active. Fair conditions were noted at SHERBROOKE in the railway passenger department, but freight was light; street railway and transfer men were fairly well employed. Transport workers at THREE RIVERS were rather quiet, though more active than a year ago. At TORONTO steam railways had a large amount of both freight and passenger traffic, without the customary snow blockade to cause congestion; garages were rather quiet. At HAMILTON the steam railways had no unemployment, but were rather quiet; 'longshoremen were idle during the month. NIAGARA FALLS reported heavy freight traffic on the railways, but the maintenance staff was reduced. At ST. CATHARINES railway workers were well employed in all departments. BROCKVILLE reported railway traffic quiet, but other transport workers were fairly active. The three railways operating round BELLEVILLE were busy in both passenger and freight departments. At BRANTFORD good conditions were reported during the month on steam and electric railways, passenger traffic being heavy. KITCHENER reported fair employment among railway men. Freight and passenger traffic at STRATFORD was said to be lighter than in the preceding month. At LONDON working forces were largely reduced in the Canadian Pacific and Grand Trunk Railways, the reductions including conductors, brakemen, firemen, engineers, section men and other trades; garages also carried fewer employees. At ST. THOMAS locomotive engineers, firemen, conductors, brakemen, yardmen and other regular employees, had a fair month, but spare men had little employment. Increased employment for conductors and motormen at WINDSOR resulted from increased service on the completion of double tracking in one

section of the street railway. At WINNIPEG the street railway continued fairly active without any substantial change in the numbers employed. Employment was reported at BRANDON to be fairly good on both steam and electric railways; transfers and garages were busy. CALGARY reported the railways very quiet and the local freight sheds exceptionally slack; transfers, liveries and garages were also quiet. At VANCOUVER some slackness as compared with previous months was apparent in both steam and electric railways; navigation and 'longshore workers were fairly active, but transfers and garages were rather quiet. At VICTORIA passenger traffic, both by steamer and rail, was light, as usual as the season; 'longshoremen were moderately active; garages were fairly busy. At PRINCE RUPERT 'longshore and railwaymen had a quiet month.

SHERBROOKE reported quiet conditions among chrome iron and copper workers, but the asbestos and quarrying industries were fairly active. At THETFORD MINES a decline in activity was noted during

the month; two mines ceased producing, men being retained only for repair work. At PORT COLBORNE the nickel refinery resumed operations after being shut down for two weeks. At the nickel mining camps of SUDBURY a surplus of labour was reported for the first time in five years. At COBALT nine cars were shipped during the month, containing approximately 665,028 pounds of ore; this compares with 16 cars containing approximately 1,266,934 pounds of ore in the previous month; no bullion shipments were made during the month; operations at the mines were stabilized to meet Hydro-electric requirements. The force of men engaged in the mine at HERB LAKE, Man., was increased, three shifts a day being worked. A general slackening in activity was reported in the mining district round FERNIE. At NELSON the industry was similarly depressed by the low prices ob-

tained for metals, which in some cases was lower than pre-war rates. The mines at ROSSLAND continued fairly active, with the exception of the Josie mine which shut down in December. The smelter at TRAIL had one copper and two lead furnaces in operation; the electrolytic zinc and lead refineries continued steadily, but the copper refinery produced only about one-third its normal amount; alterations under way in the concentrator were expected to increase tonnage. PRINCE RUPERT reported a reduction of activity in the mining camps at ANYOX, STEWART and ALICE ARM.

The Dominion Collieries at SYDNEY produced 250,000 tons of coal in January compared with 285,000 tons in the previous month, the decline being attributed to trade depression; 54,500 tons of coke was produced, with 60 ovens operating. At SYDNEY MINES the production of the Nova Scotia collieries was 54,500 tons of coal, compared with 58,000 tons in the preceding month. The coal mines at MINTO continued running steadily. Quiet conditions were reported in the coal field of the Prairie Provinces. Some miners were laid off at ESTEVAN, the mines running on short time. At DRUMHELLER the mines were closed for a period owing to shortage of orders; some improvement was noted later in the month, but none of the mines worked steadily, some miners working only two shifts a week. LETHBRIDGE reported that all mines were working on short time, averaging 5 days a week, shortage of orders being assigned as the reason; this applies to the larger mines, No. 3 and No. 6 shafts, but the smaller mines were slightly better. CALGARY reported that the mild weather materially affected coal orders, with the result that most of the Alberta mines had a slack month. At FERNIE operations were seriously curtailed in the bituminous coalfield; only 15 days were worked in the mines at COAL CREEK, and about the same period at MICHEL; the reason given was the cancellation of orders; the slackness was greatest in

the third week, when only 2 days were worked. NANAIMO reported conditions in the Vancouver Island mines fair, with moderate demand for coal; the contract from the Canadian Pacific Railway Company for coal for their steamers which was mentioned in last month's report, was cancelled owing to a drop in the price of fuel oil.

The value of the building permits in 56 cities during December amounted to \$4,654,479, as compared with \$5,289,321 in November. During January building was less active

at SYDNEY. At HALIFAX very little building was in progress; the electric power plant was nearing completion, giving considerable employment at French Village; Provincial highway work was temporarily suspended. At TRURO carpenters and painters were very slack. Only inside work was in progress at CHARLOTTETOWN. At St. JOHN building was very dull; dredging continued active at Courtenay Bay; some street work was begun to relieve unemployment. Building was very quiet at MONCTON, FREDERICTON, and BATHURST. At MONTREAL the building trades were fairly active, with good prospects. QUEBEC reported dullness in building construction, but work started on the Quebec-Chibogamon railway. The building trades were reported quiet at SHERBROOKE, THREE RIVERS and SOREL, but at St. HYACINTHE there was some repair work in progress on buildings damaged in a recent fire. At OTTAWA and HULL some excavating was done, but other building operations for the most part ceased. TORONTO reported the building trades very quiet, nearly all the contracts begun last year being completed and the new season's work not commenced, but an early resumption of activity was anticipated. At HAMILTON the building trades were quiet, but considerable city work was in progress on the sewers and roads. NIAGARA FALLS reported that over 4,000 men were employed in the works of the Ontario Hydro-Electric Commission; little municipal work was done. Canal

Building and construction

construction at ST. CATHARINES continued steadily. The building trades were quiet at BROCKVILLE, KINGSTON AND BELLEVILLE. At PETERBOROUGH some industrial and public buildings were under way. At BELLEVILLE the municipality made an early start on waterworks extensions to provide work for the unemployed. KITCHENER reported some industrial and public work in progress, but many carpenters and builders were unemployed; special city work was carried on for the benefit of the unemployed. At GUELPH also the municipality took on additional unskilled help, but the building trades were very quiet. Building operations were at a standstill at STRATFORD, WOODSTOCK and CHATHAM. Very little building was done at LONDON most of the trades being idle; the city provided considerable employment on sewer construction and other work. At WINDSOR the building trades were very quiet; over 630 men were put to work by the municipality, on two shifts of three days each. WINNIPEG reported very little building in progress, many skilled workers being without employment. At BRANDON a number of private and public buildings were in course of construction. Building construction was very quiet at CALGARY, but at EDMONTON the building trades were reported fairly active, though a number of carpenters were laid off. VANCOUVER reported practically no building construction, but some repair work was in progress during the month; a few men were employed on foundation work for the new pier, and on completing the Canadian National Railway terminal. At NEW WESTMINSTER and PRINCE RUPERT the building trades were quiet.

Railway construction employment, including maintenance of way, showed a further reduction during the month of January, the number of persons employed by the Canadian Pacific, Grand Trunk and Canadian National Railways being 28,700 at the end of December. This contraction was almost entirely due to reductions in the Canadian National Railway staffs and occurred for the most part towards the end of the month.

CHARLOTTETOWN reported considerable lumbering in progress during the first period of January, but later the stormy weather hampered operations.

Lumbering

FREDERICTON and BATHURST reported much activity in the woods of New Brunswick, weather conditions being favourable for a heavy cut of logs. QUEBEC also reported conditions good for getting out lumber, but it was anticipated that while the production of pulp wood would be increased that of merchantable lumber would show a decline. SHERBROOKE reported activity in the district camps for railway ties, and telegraph and telephone poles; saw and shingle mills were fairly active. The sawmills and shingle mills at OTTAWA and HULL still remained closed; one company had about 2,200 men at work in the bush; it was anticipated, however, that the cut of logs in the Ottawa Valley would still be considerably below that of pre-war years. At PETERBOROUGH the lumber camps were busy with large staffs employed. The camps round OWEN SOUND were active, but operations were somewhat hampered by the light snowfall. SAULT STE. MARIE reported pulp wood cutting completed for the season, but the woodmen were mostly re-engaged for the saw-log camps; about 3,000 cords of pulpwood was brought in weekly by rail. Over a thousand men were placed by the Employment Offices at FORT WILLIAM and PORT ARTHUR in bush work during January, but the demand for men slackened towards the end of the month. A demand for bushmen was reported for the Hydro-Electric camp at CAMERON FALLS. WINNIPEG reported a demand for loggers for northern Manitoba. Some demand for bushmen was noted in the various employment centres in Saskatchewan and Alberta. LETHBRIDGE reported some revival of activity in the lumber camps towards the close of the month. At FERNIE the lumbering industry still continued slack, although the situation was relieved to some extent by the placing of large tie contracts. Lumbering in the NELSON district was fairly active, but was somewhat

hampered by heavy snow; the pole camps were also active. Only the tie camps were reported active at VERNON and KAMLOOPS. VANCOUVER reported that lumbering was practically at a standstill all through British Columbia; saw and shingle mills were very slack. At NEW WESTMINSTER another large

sawmill shut down during the month, throwing many men out of work; the remaining mills were running but much below capacity. PRINCE RUPERT reported only small crews working in the lumber camps. VICTORIA and NANAIMO reported dullness in all branches of the lumbering industry on Vancouver Island.

INDUSTRIAL DISPUTES INVESTIGATION ACT, 1907

PROCEEDINGS FOR THE MONTH OF JANUARY, 1921, WITH TEXTS OF BOARDS' REPORTS

DURING the month of January the Department received reports from two Boards of Conciliation and Investigation established to deal with disputes between (1) the British Columbia Electric Railway Company, the Vancouver Power Company, Limited, and the Vancouver Island Power Company, Limited, and certain employees of each of the said companies, being members of Local Unions Nos. 213 and 230, International Brotherhood of Electrical Workers, and (2) the Canadian National Railways, all lines, and its employees, all classes. Three applications were received for the establishment of Boards, and a settlement was reached through mediation of the Department in a dispute for which application for a Board of Conciliation and Investigation had previously been received.

Applications received

During the month of January applications for the establishment of Boards were received as follows:

(1) From the employees of the Canadian Express Company, lines in Canada, being wagonmen, porters, clerks and messengers, members of the Canadian Brotherhood of Railroad Employees. A Board was established composed as follows: Mr. U. E. Gillen, Toronto, chairman, appointed by the Minister in the absence of a joint recommendation from

the other two members, Messrs. F. H. McGuigan and Jas. T. Gunn, Toronto, nominees of the company and employees respectively.

(2) From the employees of the Ontario Association of Electrical Contractors, being inside firemen and apprentices, members of the Canadian Electrical Trades Union, Toronto Branch. No Board was established in this case, as, in the Minister's view, the dispute was not one which fell within the scope of the Industrial Disputes Investigation Act.

(3) From the employees of the Dominion Iron and Steel Company, Limited, Sydney Mines, N.S., being steel workers. This application was under consideration at the close of the month.

Other proceedings under the Act

During the month of January a settlement was reached in connection with the dispute between the Cornwall Electric Railway Company and certain of its employees, being members of Division No. 946, Amalgamated Association of Street and Electric Railway Employees of America, for which an application for a Board of Conciliation and Investigation had been received during the month of December. Through the mediation of the Department of Labour negotiations between the disputants were renewed and a signed agreement covering matters in dispute was effected.

Report of Board in Dispute between the British Columbia Electric Railway Company, the Vancouver Power Company, Limited, and the Vancouver Island Power Company, Limited, and certain employees of each of the said companies

A REPORT was received from the Board established to deal with the dispute between the British Columbia Electric Railway Company, the Vancouver Power Company, Limited, and the Vancouver Island Power Company, Limited, and certain employees of each of the said companies, being members of Local Unions Nos. 213 and 230, International Brotherhood of Electrical Workers. The Board was composed as follows: Mr. M. H. McGeough, Vancouver, chairman, appointed on the joint recommendation of the other two members, Messrs. A. G. McCandless and Edmund H. Morrison, Toronto, nominees of the companies and employees respectively. The report of the Board was unanimous and while no recommendations were made as to changes in wages, a schedule of proposed changes in working conditions was submitted.

Report of Board

In the matter of the Industrial Disputes Investigation Act, 1907, and of differences between the British Columbia Railway Company, Limited, the Vancouver Power Company, Limited, the Vancouver Island Power Company, Limited, employers, and Local Unions Nos. 213 and 230 of the International Brotherhood of Electrical Workers, employees.

To the Honourable
G. D. Robertson,
Minister of Labour, Ottawa.

The Board of Conciliation and Investigation constituted in this matter and consisting of Mr. M. H. McGeough, Chairman, appointed by the Minister of Labour, Mr. E. H. Morrison, Representative of the Employees, and Mr. A.

G. McCandless, Representative of the Companies, begs to report as follows:

The Employees were represented before the Board by Mr. W. E. Fletcher of Victoria, B.C., and Mr. Saville, Mr. Murrin, Mr. Newall, Vancouver, and Mr. Tripp of Victoria represented the Companies.

The principal points in dispute being an adjustment of wages and working conditions. The Company produced copious notes and data covering all points covered by the schedule, showing the working conditions of various similar companies in Canada and Western States; the employees also producing schedules of Brotherhood Unions to prove their contentions that the schedule was not too rigid, and that the conditions were enjoyed by other members of their craft particularly in the United States. Various witnesses were also called to give evidence as to local working conditions.

Wages. The employees asked for an increase of approximately \$1.00 per day. The Company asked for a reduction of \$10.00 per month, applicable to operators only, and a modification of a number of clauses in the working conditions, which the Company claimed made the operating of their utilities very costly, while at the same time the working conditions were uncalled for as far as the remuneration and local conditions of the men were concerned. The Company also claimed that the present scale of wages was higher than that paid by any other company in Canada for similar work, while the cost of living in Vancouver was less than in either Winnipeg or Toronto, and submitted numerous exhibits to prove its contention.

In rebuttal the employees submitted a number of exhibits, basing their claim

for an increase in wages on the decrease in value of the purchasing power of money as compared with conditions which existed in former years, claiming the increase in pay did not keep up with the increased cost of living.

When the question of increased wages was first discussed by the men, the cost of living had just about reached the peak and there may have been justification for an increase at this time. At present owing to the unsettled conditions and much unemployment, with slight signs of the cost of living decreasing during the past six weeks or two months, we do not recommend an increase in wages at the present time.

It might appear that the operators are receiving good wages and more money than is paid in most of the other companies' power houses for similar work, but we do not think this is an opportune time to make any reduction in wages, and we therefore recommend that the present wage be maintained, with the exception of the auto drivers, who are to receive one hour's extra pay when acting as groundmen, instead of two hours which has been formerly paid in Vancouver.

Working Conditions.—The greater part of the Board's time was taken up in discussing the working conditions. The Company took strong objection to the majority of the clauses on the ground that they did not exist in other agreements of similar companies, and owing to their rigidity the Company was put to unnecessary expense in conducting its business; this particularly applied to the sub-contracting of work and the building of farmers' lines in rural and thinly populated districts.

After considerable discussion and close investigation into each and every clause and its result, the Board recommends the modification of a number of clauses in the agreement. It has endeavoured to do this, and at the same time has endeavoured to protect the employees from any hardship which may possibly occur from such modification.

The agreement recommended by the

Board between the above mentioned parties is attached hereto.

All of which is respectfully submitted.

(Sgd.) M. H. McGEOUGH,
Chairman.

(Sgd.) A. G. McCANDLESS,
Companies' Representative.

(Sgd.) E. H. MORRISON,
Employees' Representative

AGREEMENT BETWEEN THE BRITISH COLUMBIA
ELECTRIC RAILWAY COMPANY, LIMITED,
VANCOUVER POWER COMPANY, LIMITED,
THE VANCOUVER ISLAND POWER COMPANY,
LIMITED, AND THE INTERNATIONAL BROTHERHOOD OF ELECTRICAL WORKERS.

THIS AGREEMENT made and entered into this day of A.D. 1921, by and between the British Columbia Electric Railway Company, Limited, Vancouver Power Company, Limited, and the Vancouver Island Power Company, Limited, doing business in the Province of British Columbia, or wherever the companies may now or hereafter operate their lines, hereinafter designated and known as the "Employer", the party of the first part; and the International Brotherhood of Electrical Workers, their successors or assigns, the party of the second part:

WITNESSETH: First, that for and in consideration of harmonious relations and settled conditions of employment with financial and personal relations mutually beneficial and the covenants and agreements herein mentioned, the parties hereto do hereby enter into, ordain, establish, and agree to the following wage schedule and conditions of employment, commencing A.D. 1921, which shall continue in full force and effect thereafter or until thirty days' notice in writing be given by either of the parties hereto to the other, whereupon the same may be amended, cancelled, or substituted as may be mutually agreed upon by the parties hereto.

The employer agrees to employ none but members in good standing of the International Brotherhood of Electrical Workers, to perform the various classes of work mentioned in Article 35, and further agrees that any such class of work performed for, or at the instance of the company, by contractors, sub-contractors, or third parties, shall be performed only by members in good standing of the International Brotherhood of Electrical Workers, except that in the case of rural or thinly populated districts outside of cities prospective customers for light and power will be permitted to set poles only to meet the companies' lines to secure light and power for themselves; the total number of poles in no case to exceed twenty poles, provided, however, that such poles be set on the customers' own property and not on the highway. All cross-arm work, stringing wire and making connections to be done by journeymen of the companies' line

department. All erection of such poles to be under the supervision of a journeyman of the companies' line department.

The employer agrees to furnish the representative of the organization a pass through all the employer's shops and stations, also an "all lines" transportation pass, during the life of this agreement.

When necessary to interview the management in connection with any matter affecting this agreement, the representative of the union, or the representative and a committee (if committee be appointed) shall be given an early hearing.

WORKING RULES

GENERAL

These rules shall apply to all employees listed in Article 35, and shall be posted for the information and government of such employees.

CONCESSIONS

Article 1: (a) Any employee covered by this Agreement will be entitled on becoming a consumer, to gas concessions as heretofore, and to purchase electric light from the company for the use of himself and his family only at 4 cents per kilowatt hour as measured by meter, and subject to such regulations for the use of same as the company may issue from time to time; the company to install meters free and charge no rent for same.

(b) Free transportation shall be granted to all employees at all times over all lines within the city in which they are employed, or over the interurban district in which they are employed. Under special circumstances the company may grant, upon request, a pass to an employee covering transportation between the nearest interurban station to his home and the place where he is employed, should he be living in a district where city car accommodation will not adequately cover his needs.

(c) Each employee shall be granted one round trip pass per week for himself, wife and members of his family wholly dependent on him, over Districts 1, 2 and 4, good on any day of such week, and four round trip passes per year over District 3 or Saanich line, good on any day except Saturday, Sunday or public holidays.

(d) Any employee residing on the interurban lines shall be entitled to purchase settlers' tickets not exceeding thirty per month, at half rate for his wife and the members of his family wholly dependent on him, unless this provision is contrary to law, provided that the minimum rate for such tickets shall be six cents.

(e) Any employee making wrongful use of any of the concessions granted by this clause, or transferring them to persons not authorized to receive them, shall be dismissed from the service.

(f) Employees covered by this agreement shall be entitled to the same transportation concessions as they received immediately prior to the date of this Agreement, where such concessions exceeded the concessions provided for in the foregoing subsection.

LAY-OFFS.

Article 2. In cases of lay-off of men through slackness of work, etc., seniority and efficiency shall be taken into account. Men who for one reason or another are laid off for a period not exceeding six months must be given credit for all past services when question of seniority is a factor.

Men having previous service shall be given the preference in engaging men, provided services were satisfactory at time of lay-off. Written instructions to this effect to be given to all officials by the management.

LINEMEN AND WIREMEN.

Article 3. (a) Any employee giving orders and having charge of more than three men shall be a foreman. All foremen shall have at least three years' experience in one or more branches of the trade.

(b) In no case shall a foreman be permitted to handle tools or do that class of work required of a journeyman or helper while employed in the capacity of foreman.

(c) *Sub-foreman:* Any employee giving orders and having charge of three men or less shall be sub-foreman.

(d) Sub-foremen shall not be required to handle tools or do that class of work required of a journeyman or helper when crew is working on high voltage wires or where work is hazardous.

(e) Expenses of board and lodging will be allowed all foremen when sent away from home town.

Article 4. Journeyman: An employee having three or more years' experience in one or all branches of the trade as listed in Article 35.

Article 5. Apprentice: (a) An employee not having three years' experience in one or more branches of the trade. All apprentices must serve three years' actual work in the business before they can be rated as journeymen, except where journeymen cannot be obtained, and the ratio of apprentices shall not exceed one to seven journeymen in each department. Apprentices shall not be required to do journeymen's work, except during the last six months of their apprenticeship and shall be under direct supervision of journeymen.

(b) Groundmen to be given preference when taking on apprentices, merit and ability being equal, and to have an allowance for the time they have worked as groundmen on their apprenticeship; the allowance to be calculated on the basis of one-third of the time worked as groundman, but in no case shall the time allowance exceed one year.

Article 6. Eight hours shall constitute a day's work. Regular working hours 8 a.m. to 12 noon, and 1 p.m. to 5 p.m., except as provided by Article 24.

Article 7. Employees to go to and from the storeroom and from camp to camp in the employer's time. Men detailed on jobs outside the city limits shall be entitled to meals or in lieu thereof 75 cents per meal.

Article 8. (a) Overtime shall be computed on the basis of eight hours per day and at the standard rate the employee is entitled to in Article 35.

(b) Overtime computed at double time of standard rate will be paid for all time worked at other than the employee's regular assigned hours, and when following the regularly assigned hours shall continue until employee is relieved from duty. Relief shall be for at least a period of eight hours.

(c) An employee called for work before 5 a.m. shall be entitled to overtime until relieved from work. After 5 a.m. and before 8 a.m. he shall be entitled to overtime until 8 a.m. After 8 a.m. straight time only will be allowed. Employees called on duty shall receive not less than four hours' pay at standard rate, except when employee is called between 7 and 8 a.m., when overtime rate only shall be allowed.

(d) When called for trouble, such calls shall be bona-fide emergency calls.

(e) All time worked on holidays by other than shift men shall be considered as overtime. Holidays shall be as follows:—Sundays, Saturday afternoons, New Year's Day, Good Friday, Victoria Day, Dominion Day, Labour Day, Thanksgiving Day, Christmas Day, and such other holidays as are generally observed in the Province in which the companies operate, when such holidays are enforced by the companies. Employees entitled to vote will be allowed time off to vote on election day, with pay.

Article 9. (a) All employees affected by this schedule detailed for work away from home town upon a temporary job will be allowed expenses of board and lodging as hereinafter stated:—

(b) For the first twenty-one calendar days, full expenses of board and lodging will be allowed, and for the following nine calendar days \$1.00 per day shall be added to the standard rate of pay as per schedule. Any job exceeding thirty days shall be considered a permanent job for which no board and lodging will be allowed. Employees shall be notified before being sent away from home town whether the work will be classified as temporary or permanent job. If classified as a temporary job and work exceeds thirty calendar days, board and lodging will be allowed until return to home town. If classified as a permanent job and a return to home town (except in case of dismissal or resignation) is made in less than thirty days, board and lodging will be allowed.

Article 10. Employees affected by this schedule resigning or dismissed from work while away from home town, after fourteen days' employment, will receive transportation to home town, where payment will be made.

Article 11. The employer agrees to pay all employees covered by this schedule by cheque four times per month. Pay day to be as follows:—on the 8th for time worked from 23rd up to and including the last day of previous month; on the 15th for time worked from 1st of month up to and including the 8th; on the 23rd for time worked from 8th up to and including the 15th; on the 1st for time worked from 15th up to and including the 23rd., provided that in incorpo-

ated cities the payment shall be made in cash at or before the hour of twelve noon on Saturdays, or before 5 p.m. on other week-days.

Article 12. (a) All cable splicers' helpers shall be journeymen electrical workers.

(b) Expenses of board and lodging will be allowed all lead cable splicers and helpers when sent away from home town.

Article 13. (a) All joining, splicing, testing, bonding and connecting of lead covered cables considered as under the jurisdiction of and belonging to cable splicers, and all this class of work to be done by journeymen cable splicers.

(b) All bonding, racking, repairing and maintenance of cables and electrical equipment used in connection with cables and underground man-holes, pits, tunnels or subways shall be done by journeymen cable splicers.

Article 14. Cable splicers at no time shall be allowed to work on live cables or where work is hazardous unless attended by a helper. Cable splicers shall not work on live cable carrying in excess of 650 volts and shall not work on cables where the difference in potential is more than 300 volts between conductor and ground, it being understood that work on cables set forth in above section shall mean to cut off, splice, wipe joints, repair broken armor by means of hot metal, and bending.

Article 15. All wires carrying a voltage of 650 or over shall be classed as high voltage wires.

Article 16. Where work is being done on high voltage wires, two journeymen must be assigned to the job, and are not allowed to work on two different wires at the same time.

Article 17. In case of trouble on live high voltage wires or where work is hazardous, two or more journeymen must be sent out to repair trouble. One man may be sent out to watch until another man can be obtained.

Article 18. No journeyman shall be allowed to work on a high potential wire carrying a voltage in excess of 2,600 volts.

Article 19 (a) On all lines built or reconstructed after July 1st 1916, all wires of any circuit carrying more than 5,000 volts will be kept not less than four feet away from any other circuit.

(b) On existing lines where adjacent wires of two separate circuits carrying over 5,000 volts are closer than four feet, employees shall not work on one of the two circuits while the other is alive.

Article 20. All installations, repairs and maintenance work on street electroliers shall be under the jurisdiction of and done by journeymen electrical workers.

Article 21. Working on poles, bridges, towers and fixtures at an elevation of 85 feet or over, time to be computed at two times the standard rate as per schedule.

Article 22. Linemen to have jurisdiction over assembling and erecting towers, framing and setting poles.

Article 23. In all gangs erecting poles, towers and fixtures or pulling in cables, at least three journeymen shall be assigned to job, except in isolated districts in case of three poles or less where only two journeymen are available a

third man in the gang may be substituted at journeyman's rate.

Article 24. (a) Troublemens, helpers and drivers on trolley and electric light work, working shift work, will be paid at straight time for any eight consecutive hours out of the twenty-four hours for trouble only. Regular men to work shifts in turn of not longer than two weeks' duration and must take one day off in seven.

(b) Troublemens, helpers and drivers assigned to shift work on regular day off to receive two times standard rate.

(c) Emergency crews to work on trouble only.

(d) There shall be three troublemen in Vancouver, one to relieve the other two and to do any inside as well as outside trouble work when not relieving. All to be combination-men.

(e) In case of sickness, accident, emergency or unusual load conditions, a lineman may be employed as troubleman, provided he has not less than twelve hours' rest before being called.

(f) The company may employ one combination man on the Fraser Valley and one in North Vancouver.

(g) No man to be assigned to shift work for a period of less than thirty days, except as provided by the subsection (e).

Article 25. All blasting shall be done by experienced powder-men.

Article 26. In new buildings employees shall receive the minimum wage of the organization of the I. B. E. W., in whose jurisdiction the work is being done, getting the higher price for that class of work. On all buildings where inside wiring is being done, where the work requires more than four man-hours' time, journeymen shall receive the minimum wage of the organization of the I. B. E. W. in whose jurisdiction the work is being done, getting the higher price for that class of work.

Article 27. Men driving automobiles shall be paid as per wage schedule, except where driving is done by employees in addition to other duties, in which case they shall be paid one hour's extra pay per day or part thereof at standard rate. This shall not apply to troublemen and patrolmen. Employees shall in no case furnish means of transportation.

Article 28. (a) Station wiremen shall have jurisdiction over maintenance of electrical apparatus in substations.

(b) In absence of foreman, a journeyman shall be left in charge, who shall rate as foreman while acting in that capacity.

Article 29. The employer must furnish protective shields for protection of men working on wires carrying voltage in excess of 650 and shall furnish each gang with first aid sets.

Article 30. Suitable covers to be provided for work cars during inclement weather.

STATION OPERATING STAFF.

GENERAL.

Article 31. (a) Journeyman Operator: An employee having not less than three years' experience in electrical work. His duties shall

consist of the operation of station during his shift.

Article 31. (b) Apprentice Operator: An employee having less than three years' experience of electrical work. His duties shall consist of operating stations as enumerated in Article 32 (c).

(c) Ratio of apprentices to journeymen shall not exceed one to seven over system, subject to Article 32 (c).

(d) Relief operators must be journeymen and must be paid not less than six days per week, except where the present relief operators are apprentices, in which case they may be continued. Relief operators to be allowed straight time for travelling.

(e) Monthly days off may not be taken whilst on night shift.

(f) In all branches (*i.e.* Load Dispatchers, Operators, Apprentices and Helpers) where three shifts are worked, shifts shall be worked by what is known as the revolving watch: 7k-15k, 15k-23k, 23k-7k. Two weeks to be maximum period of shift.

(g) In stations working two shifts only, men to take shifts in turn.

(h) Eight consecutive hours out of twenty-four to constitute a day's work.

(i) In case of sickness, a reasonable amount of time will be allowed with pay at the discretion of the chief operating engineer.

(j) In the event of working overtime double the amount of time worked will be allowed off.

(k) Where men are required to work more than one shift in 24 hours (except when changing shift) they will be allowed double time off, for the second shift.

(l) Operators may do any minor electrical repairs in the Station.

(m) Four days' monthly vacation and fourteen days' annual vacation allowed with pay. In the event of men having worked less than one year, one day's holiday will be allowed for each month of service up to the month in which holiday is taken.

STATION OPERATING STAFF.

MAINLAND.

Article 32. (a) Load Dispatcher: The Load Dispatcher on duty has control over the general operation of the plant, and instructions issued by him in regard to switching, clearances, load distributions, etc., must be regarded as final.

(b) Chief Load Dispatcher: A Journeyman Operator having charge of Load Dispatchers and performing all monthly reliefs of Load Dispatchers.

(c) No apprentice operator shall take charge of a shift except during the last six months of his apprenticeship and then only in case of emergency, except in Fraser Valley and Lulu Island and portable substations, where apprentices of not less than one year's experience may be employed. Owing to the excess of apprentices due to existing conditions, the present apprentices may be allowed to continue their apprenticeship.

(d) Barnet, Coquitlam and railway portables shall require a journeyman if operator is necessary, except in case of present attendant at Barnet, who may be retained, but may be classified as an apprentice operator and paid the wages of a first-year apprentice, so long as he continues his present duties. The duties of the attendant at Barnet shall continue as at present, and the same arrangement shall apply to Coquitlam if an attendant is necessary.

(e) Oilers or helpers employed at power houses and Main Street substation, and Rock Bay, may, after twelve months, be rated as apprentices.

(f) At all power houses, Main Street substation, and Rock Bay substation, there shall be at least one operator per shift and two helpers for the Station.

(g) At Horne-Payne, Point Grey, Barnaby and New Westminster, there shall be at least one operator per shift and one helper at night.

(h) Vancouver Steam Plant Electrical Board one operator per shift when in operation.

CLASSIFICATION OF STATIONS.

Class A. All power houses, Lake Buntzen, Jordan River and Main Street substation.

Class B. Horne-Payne, Haro Street, Point Grey, Earl's Road, Burnaby, New Westminster, North Vancouver and Rock Bay.

Class C. Fraser Valley Substations, Lulu Island, Goldstream and Portables.

METERMEN.

Article 33. (a) Eight hours shall constitute a day's work. Regular work hours from 8 a.m. to 12 noon, and from 1 p.m. to 5 p.m.

(b) Metermen shall have jurisdiction over all meters except switchboard meters in substations and power houses. Electric ranges and all household apparatus and electrical appliances to be repaired as formerly so long as the company continues to do this work.

(c) In the case of sickness, a reasonable amount of time will be allowed off with pay at the discretion of the Superintendent; also pay will be allowed for public holidays.

(d) In the event of working overtime, double the amount of time will be allowed off.

(e) Article 8 (e) and Article 9 (a) and (b) apply to metermen.

ARC TRIMMERS.

Article 34. (a) Arc trimmers on patrol work to work any eight consecutive hours out of the twenty-four, and forty-eight hours shall constitute a week's work.

(b) In case of sickness, a reasonable amount of time will be allowed off with pay at the discretion of the Superintendent.

(c) One day per week will be allowed off with pay.

(d) In the event of working overtime, double the amount of time worked will be allowed off.

WORKERS.

Report of Board in Dispute between the Canadian National Railways, all lines, and employees, all classes

A REPORT was received from the Board established to deal with the dispute between the Canadian National Railway, all lines, and employees, all classes. The Board was composed as follows: Mr. J. M. Godfrey, Toronto, chairman, appointed by the Minister in the absence of a joint recommendation from the other two members, Messrs. F. H. McGuigan, Toronto, appointed by the Minister in the absence of a recommendation from the company, and Mr. David Campbell, Winnipeg, nominee of the employees. The members of the Board concurred on all points save one, and recommended that certain dismissed employees be reinstated and paid for the time they had actually lost by their dismissal. The most important feature of the dispute was, however, the request of the employees for the withdrawal of the order prohibiting employees of the Canadian National Railways from becoming candidates for the Provincial or Dominion Parliament, and on this point no agreement could be reached. The chairman and Mr. Campbell supported the employees in their demands. Mr. McGuigan did not concur and presented a minority report.

Report of Board

In the matter of the Industrial Disputes Investigation Act, 1907 and of a dispute between the Canadian Na-

tional Railways, employer, and its employees, being members of various railway employees' organizations, employees.

Toronto, January 29th, 1921.

The Hon. G. D. Robertson,
Minister of Labour,
Ottawa.

Dear Sir,

The Board of Conciliation established by you under date of December 10th, 1920, to enquire into the dispute between the management of The Canadian National Railways and their employees, being members of the various railway employees' organizations, beg to report as follows:—

Upon the Board being completed, it was ascertained that its hearings could be conveniently held at Toronto, and Monday the 17th day of January 1921, was fixed for the commencement of its proceedings.

The Board proceeded on that date and the employees were represented by:

Mr. H. E. Barker, Canadian National Western Lines, Order of Railway Conductors, of Winnipeg.

Mr. S. M. Berry, Senior Vice-President of the Order of Railway Conductors.

Mr. J. M. Mein, Deputy President, Order of Railroad Telegraphers.

Mr. E. A. Ball, Assistant Vice-President, Brotherhood of Locomotive Firemen and Enginemen.

Mr. A. Johnston, Assistant Grand Chief, Brotherhood of Locomotive Engineers.

Mr. A. R. Mosher, President, Canadian Brotherhood of Railroad Employees.

Mr. H. W. Harper, representing Machinists.

Mr. R. J. Tallon, President, Division No. 4, Railway Employees' Department, American Federation of Labour.

Mr. W. B. Turnbull, Grand Vice-President, United Brotherhood of Maintenance of Way Employees and Railroad Shop Labourers.

Mr. A. C. Hay, Vice-President, Brotherhood Railway and Steamship Clerks.

Mr. A. J. Ryall, General Chairman, Canadian National Railways Western Lines, Brotherhood of Railroad Trainmen.

Mr. R. A. MacDonald, General Chairman, Canadian National Eastern Lines, Order of Railway Conductors.

Mr. James Murdock, Vice-President, Brotherhood of Railroad Trainmen.

Mr. Geo. K. Wark, Vice-President, Brotherhood of Locomotive Fireman and Enginemen.

Mr. J. P. Merrigan, representing Boiler Makers and Helpers.

Mr. John W. Bruce, representing Plumbers, Steamfitters and Helpers.

Mr. John Noble, representing International Brotherhood of Electrical Workers.

Mr. J. W. J. Smith, General Chairman, Brotherhood of Railway Carmen of America.

Mr. P. Woods, representing United Brotherhood of Maintenance of Way Employees.

Mr. G. A. Stone, General Chairman, Canadian Government Railways, Brotherhood of Locomotive Engineers.

Mr. Louis Beuloin, representing Brotherhood of Railway Carmen of America.

Mr. T. M. Spooner, General Chairman, Canadian Northern System Brotherhood of Locomotive Firemen and Engineers.

Mr. W. G. Atkinson, General Chairman, Canadian Government Railways, Brotherhood of Locomotive Firemen and Enginemen.

Mr. J. J. Trainor, representing Order of Railroad Telegraphers, Eastern Lines, C. N. R.

Mr. W. H. Phillips, General Chairman, Order of Railroad Telegraphers, Western Lines, C. N. R.

Mr. W. G. Powlesland, General Vice-President, International Brotherhood of Blacksmiths and Helpers.

Mr. Hills, Assistant to the President of the Railways, attended unofficially on behalf of the Management. At a later date President Hanna also attended on invitation by the Board.

Upon opening up of the matters in dispute, it was found that practically all of the employees of the railways to the number of upwards of fifty-eight thousand, were directly concerned. The locality of the dispute is the various railways throughout Canada now operated under what is generally known as the Canadian National Railways.

The dispute arose as the result of a telegram dated September 23rd, 1920, sent to Mr. D. B. Hanna, President of the Canadian National Railways, by Mr. Robinson, an official of the Independent Labour Party in New Brunswick:

Have you any objection to any C. N. R. Employees becoming candidates for the New Brunswick Legislature and if so could you give reasons? Please wire reply immediately.

To this telegram Mr. Hanna, replied on September 25th:

Your message yesterday. Under no circumstances can an employee continue as such with the Canadian National Railways and become a candidate for legislature Provincial or Dominion. The moment he does so he automatically severs his connection with the railway. The reasons are too obvious for discussion.

While these telegrams appeared in the press and were given considerable publicity, no formal order was issued in writing to the employees and bulletined according to regular railway practice. In fact, up to the present time the order

has not been promulgated in accordance with the procedure usually recognized in connection with the operation of railways. The representatives of the employees' organizations took no steps in connection with the so-called order as they claimed it was not an order or rule binding on them until issued in the regular way in writing and properly bulletined.

The order came up for specific application in connection with the three employees whose cases are referred to us for report.

In June, 1920, Mr. Palmer was elected as a candidate of the Labour Party to the Manitoba Legislature for the constituency of Dauphin. At the time of his election he was train dispatcher at Dauphin in the employ of the Canadian National Railways. Before the road had been taken over by the Government he had been an employee of the Canadian Northern for many years.

Mr. Moore, who was returned at the same election as the Labour representative for Springfield, was a painter in the Canadian National shops in Winnipeg. He had also been an employee of the Canadian Northern.

Mr. Higgins, a boiler maker in the Canadian National shops at Leaside, near Toronto, early in September, 1920, accepted the nomination of the Labour Party to contest a bye-election in North East Toronto for the Ontario Legislature. This election was held on the 7th of November and he was defeated. These shops were owned and operated by the Canadian Northern before Government ownership.

It was admitted that these three men were employees not of the Government but of a company whose capital stock is owned by the Government. Mr. Hanna and his associate directors are still in fact and in law directors of the Canadian Northern Railway Company.

Messrs. Palmer and Moore had applied for and received leave of absence to contest their constituencies. It was not shown that at the time the leave was requested their purpose was to take part in the election. It was, however, stated and not denied that their candi-

datures were a matter of public notoriety and well known to the officials of their respective divisions.

After the election, both men returned to their duties and continued in the employ of the company until November. There is no evidence or suggestion that after the election they failed in any way to faithfully and efficiently perform their duties or that their positions as members-elect of the Manitoba Legislature had in any way injuriously affected the railway or interfered with the proper performance of their duties.

Early in November, Messrs. Palmer and Moore were called before their superintendents and notified that unless they agreed to resign as members of the Legislature they would be dismissed from the service of the company. They refused to do so and were forthwith dismissed.

Mr. Higgins did not quit work after accepting the nomination but continued to perform his duties until about ten days before the election when he applied to his foreman and was granted leave of absence to conduct his campaign. A few days later he was surprised when notified by his foreman that his acceptance of the nomination had resulted in his automatic dismissal from the service of the company. Immediately after the election he reported for work and was refused.

These dismissals resulted in a combined protest against President Hanna's order by the various railway employees' organizations followed by a request for a conference with him. This was arranged and was held in Toronto on December 3rd, 1920. After a lengthy discussion Mr. Hanna refused to recede from his position or modify the order.

The employees then applied for a Board under the Industrial Disputes Investigation Act and the Board was established.

The Board is of the opinion that the cases of Messrs. Palmer, Moore and Higgins can be dealt with apart from the determination of the principal question in issue. In fact, the management made little effort to justify these dismissals and intimated that if the ques-

tion of principle were conceded, these cases could be satisfactorily adjusted.

It would seem that when President Hanna sent the telegram replying to Mr. Robinson on September 25th, he believed that all the employees of the Canadian National Railways were civil servants, or, in any event, subject to the same restrictions as civil servants. It is difficult to believe that at the time he sent this telegram he could have known, or if he knew could have fully considered the legislation of Parliament dealing with this question enacted in the Session of 1919.

All civil servants are under what is known as the Civil Service Act of 1918.

This Act contains the following provisions:

"Sec. 32 (1) No deputy head, officer, clerk or employee in the civil service shall be debarred from voting at any Dominion or Provincial election, if, under the laws governing the said election, he has the right to vote; but no such deputy head, officer, clerk or employee shall engage in partisan work in connection with any such election, or contribute, receive or in any way deal with any money for any party funds."

There was an Amendment to that Act passed in 1919:

"Sec. 38a. The provisions of this Act shall not apply to positions in connection with the Government railways or any railway owned or controlled by His Majesty."

The effect of this legislation is that Messrs. Palmer, Moore and Higgins were not civil servants and were in exactly the same position, so far as the law is concerned, as the employees of a privately owned railroad.

Mr. Hanna further claimed that in sending his telegram of the 25th of September, he was simply repeating a long established rule of the Canadian Northern Railway. The employees, on the other hand, emphatically stated that they were never given notice of any such rule, and Mr. Hanna admitted that the rule had never been issued in regular form.

As evidence that there was no such rule on the Canadian Northern, it was shown that Mr. Casey, a locomotive engineer, was twice given leave of

absence to contest the Saskatoon constituency in elections for the Saskatchewan Legislature.

It was also shown that, before the telegram of September 25th, there was no intimation of any such rule on the Canadian National Railways. This is evidenced by the fact that in the Ontario general elections of October, 1919, Mr. Swezey, a yardman at Capreol, was given leave of absence to contest the constituency of Sudbury. In fact Mr. Hanna admitted that no employee of the Canadian Northern had ever been refused leave of absence to offer himself as a parliamentary candidate.

Applying these facts to the cases of Messrs. Palmer and Moore we find that these men had the legal right to stand as candidates for the Manitoba Legislature. There was also no rule of the Railway in June, 1920, which prohibited them from doing so. They applied for leave of absence in the regular way and this leave was granted by the duly authorized officials of the company. After the election, they returned to their employment with the company and no suggestion has been made that they did not, up to the time of their dismissal, perform their duties faithfully and efficiently. It is admitted by the management that under the agreement between the company and its employees no employee can be summarily dismissed without cause.

The facts in connection with the case of Mr. Higgins are slightly different. It is clear, however, that at the time he became a candidate in North East Toronto there was no rule prohibiting him from accepting the nomination. He also received leave of absence in the regular way and at no time did any act which could result in his automatic dismissal from the service of the company.

It seems also to the two members of the Board who have had practical experience in railroading that the whole proceeding with regard to the so-called order is irregular. Such an order could only be made a rule of the road by promulgation to the employees in writing and by being bulletined in the

regular way. This has never been done and it is doubtful if even now the order has any binding effect on the employees.

The Board, therefore, in view of all the facts, recommend that Messrs. Palmer, Moore and Higgins should be reinstated without loss of seniority and paid for time actually lost by reason of their dismissal.

With regard to the fourth question in dispute, namely: the request of the employees for the withdrawal of the order, Mr. McGuigan, representing the employers, holds somewhat different views from the other members of the Board and will make a separate report on this point.

(Sgd.) JOHN M. GODFREY,
Chairman.

(Sgd.) F. H. MCGUIGAN,
Representative of the employers.

(Sgd.) D. CAMPBELL,
Representative of the employees.

**Report of Messrs. J. M. Godfrey and
D. Campbell**

In the consideration of the fourth question submitted to them, namely, the request of the employees for the withdrawal of the order, the Board has heard much evidence and the able and exhaustive argument of both sides. They feel that no good purpose can be served by a minute analysis of the evidence and the argument, or by an expression of an opinion in a detailed way as to the various matters submitted to them. They have been influenced in coming to this conclusion by the practical solution offered as a settlement of the dispute and in their opinion a full discussion would consequently be largely of an academic character.

It appeared early in the proceedings that in reality there was little difference between the position taken by the management and the employees.

Mr. Hanna based his position on the following pronouncement made by Sir Robert Borden in Parliament at the

time the railroads were being taken over by the Government:

As to the immediate future I have already said that we do not intend to operate the Canadian Northern Railway system directly under a Department of the Government; it is our intention to operate it for the present through the corporate machinery by which it has been operated in the past. There will be a reconstituted Board of Directors. We shall endeavour to get the best men we can and we shall not interfere with them. We shall leave the administration and operation of that road to be carried on absolutely under that Board of Directors and we shall use every means available to the Government (and if necessary we shall come to Parliament for that purpose) in order that anything like political influence, political patronage or political interference (I am using the word "political" in its narrower sense) shall be absolutely eliminated from the administration of that road.

Mr. Hanna stated that at the time he and his associates took office it was understood that this was to be the policy of the management and that it was only on this condition that they accepted office. The employees stated that they agree absolutely with this policy and are prepared to co-operate to the utmost with the management to prevent political interference or the exploitation of the railroads for political purposes. The employees regard this policy to preclude such matters as appointing friends of the party in power to positions on the road, the establishment of a political patronage list in connection with the purchase of supplies, the influencing of employees in elections by officials, superintendents, etc., and also as a prohibition against the exercise by the management of its powers in favour of or against any political party.

But they maintain that this policy does not involve the prohibition of any employee under any circumstance offering himself as a candidate in parliamentary elections. They further maintain that the Government and Parliament could not have intended any such prohibition inasmuch as when the matter was considered by Parliament in the session of 1919 they were specially excluded from the disabilities of the Civil Service Act and were in fact confirmed in all the civil rights which

they had enjoyed as employees of a privately owned railroad.

The employees agree that there is no rule which entitles them to leave of absence as a matter of right and that the management may refuse leave of absence for proper cause if in its opinion it would be against the interest of the railroad to grant such leave of absence. They claim, however, that leave of absence has practically always been granted except for three reasons: (1) When there is a shortage of men; (2) When the applicant desires to enter the service of another road; (3) When the applicant desires to engage in the liquor business.

They agree that in some cases an employee could not efficiently perform his duties with the company and at the same time pursue a parliamentary career. In these cases the management would be quite within its rights to refuse leave of absence. But they also state that there are many classes of employees whose occupations are of such a character that this disqualification would not apply. They give as illustrations of this the cases of Messrs. Palmer, Moore and Higgins. If leave of absence were granted to these men their positions could have been filled by others and on their return they could have resumed their duties without detriment to the company. They do not believe any evil results have been occasioned to the Canadian Pacific Railway Company, because four of its employees have been permitted to engage in parliamentary careers. Of these, two have attained Cabinet rank, the Minister of Labour in the Federal Government, and the Minister of Mines in the Ontario Government.

In view of the really insignificant difference between the management and the employees and their sincere agreement on the principle that there should be no exploitation of the company for political purposes, the Board believed that some working arrangement was possible which would solve the difficulty. It seemed obvious that the common purpose could best be attained if the irritation caused by the order were

eliminated and the two parties vitally interested in the successful operation of the roads brought together in hearty and sympathetic co-operation.

The Board accordingly spent several days in an effort to bring about by conciliation and reasonable compromise a practical working arrangement which would secure the maintenance of the policy agreed upon and yet recognize that which the employees regard as their basic and legitimate rights.

The employees finally made the following proposal:

MEMO. SUGGESTED BY THE EMPLOYEES AFTER HAVING RECEIVED AND CONSIDERED THE MEMORANDUM SAID TO HAVE BEEN ISSUED BY THE COMPANY AND HANDED TO THE CHAIRMAN ON JANUARY 19, 1921:

Toronto, Ont., January 20th, 1921.

The representatives of the organizations concede without reservation that the first essential requisite for service with the Canadian National Railways is unstinted and continuous loyalty in such service and that this must be evidenced to continue in the service.

Loyalty being the first requisite for employment it should be held that an employee cannot continue in the service while undertaking to exploit for political purposes the operation of the Railways, but to accept nomination in the ordinary way or to be elected to a public office should not be regarded in itself as *prima facie* evidence of disloyalty.

It is claimed that no posted or written rule was violated by the two members of the Manitoba Legislature who ran for and were elected to such positions while in the employ of the Canadian National Railways and that they should therefore now be reinstated and reimbursed for such time as they may have lost as employees of the Railways on account of the order of dismissal issued in their cases. The same principle should be recognized in the case of the employee who ran for the Ontario Legislature and was defeated in North-East Toronto.

If an employee is requested by his fellow citizens to become a candidate for, or is elected as a member of Parliament, it must be understood that the service of the Railway must not be embarrassed by his aspirations for political preferment and that only in such cases where this may be shown to be the case can he, with the sanction of the company's officials and the committee of his fellow employees, be given leave of absence.

It should be noted that this proposal recognizes the principle that in the

consideration of applications for leave of absence the interests of the company must be regarded as paramount. The company being fully safeguarded, it is the opinion of the Board that this solution of the dispute can be accepted by the management, without abandoning the principle enunciated by the Government. It should at least be given an honest and sincere trial.

The undersigned members of the Board therefore recommend the acceptance of the employees' proposal.

(Sgd.) JOHN M. GODFREY,
Chairman.

(Sgd.) D. CAMPBELL,
Representative of the Employees.

Mr. McGuigan's Report

In the matter of the Industrial Disputes Investigation Act, 1907, and of a dispute between the Executive Management of the Canadian National Railways, employer, and employees of the Canadian National Railways, employees.

To the Honourable,
G. D. Robertson,
Minister of Labour,
Ottawa, Ontario.

Dear Sir,

While earnestly desiring agreement with my colleagues and a unanimous report, it seems to me advisable to say that I am decidedly of the opinion that it would be most unwise to dispose of Question No. 4, as proposed by the employees on Jan. 20th, last, as shown in the Appendix to the Board's Report, which is so ingeniously vague as to be susceptible of as many different interpretations as interested political aspirants have capacity to devise, and, if adopted as a rule of the railways, would result in impairment of discipline, and become a source of frequent and endless disputes. In addition, it would be most unfair to the great majority of

honest and efficient officials, and other employees having no desire for Parliamentary honours or other Government positions, who, continuously, year after year, conscientiously perform their daily duties.

Any general rule providing equal rights in promotion to the very few employees politically inclined, and serving the railway only at such times periodically as best suited their own personal interests, and who, if elected to Parliament might advocate policies and support measures in direct opposition to the interests and views held by the great majority who devote their entire time and energies to the service and interests of the railway alone, would be manifestly unfair.

On the important question of political control, influence or interference in the operations or management of the Canadian National Railways, leading representatives of the employees emphatically proclaimed their earnest and hearty approval, and pledged President Hanna their support against any efforts in that direction, admittedly agreeing with the decided opinion of a vast majority of the thinking people of the Dominion, that political domination or interference in the management or operations would result in the laxity of discipline and general demoralization of the service to an extent which would eventually reduce earnings and correspondingly increase the already heavy tax burden of the Canadian people, who own these railways. Unfortunately, despite this seeming unity of opinion on the main proposition, the employees made vigorous protest against President Hanna's declaration of policy, as outlined in the following telegrams:—

Moncton, N.B., Sept., 23, 1920.

D. B. Hanna,
Sydney, N.S.

Have you any objection to any C. N. R. employees becoming candidates for the New Brunswick Legislature, and if so, can you give reasons? Please wire reply immediately.

(Sgd.) J. A. ROBINSON.

Truro, N.S., Sept., 25, 1920.

J. A. Robinson,

Moncton, N.B.

Your message yesterday. Under no circumstances can an employee continue as such with the Canadian National Railways and become a candidate for legislature, Dominion or Provincial. The moment he does so he automatically severs his connection with the railways. The reasons are too obvious for discussion.

(Sgd.) D. B. HANNA.

Representatives of the employees contend that if this policy were enforced it would restrict their political freedom and deprive them of their right of representation in the Dominion and Provincial Parliaments, which they held to be the inalienable right of all citizens. This contention was clearly shown to be without foundation, as they were unable to sustain this by any rule, or schedule, or to establish that their rights as citizens were in the slightest degree affected by President Hanna's declaration of policy. While some three or four individual cases were cited of railway employees being elected to Parliament, also filling other important Government positions, and still holding their seniority rights in railway service, it was shown in each case to be by special arrangement, unsupported by any rule or schedule obligations on the part of the railway.

President Hanna's telegram of September 25th simply outlines what he understands to have been the policy of the Government, as several times declared and elaborated by Premier Borden in speeches before Parliament during the year 1918, when consideration was being given by that body to taking over and operating these lines.

On the other hand, leading representatives of the employees positively and emphatically stated that within the same period, Premier Borden granted

them an interview, during which he gave them absolute assurance of an entirely different nature.

Careful consideration during and since the hearings of all evidence and other matter submitted to the Board, coupled with many years' experience in the operation of railways and familiarity with operating rules, including also the schedules of employees' organizations in all branches of the service, leads me to the conclusion that President Hanna was clearly within his rights in his declaration of policy; and also that it would be a commendable act of justice to reinstate the three men dismissed, as their offence was evidently due to the fact that this policy had not been brought to the attention of the employees in the usual manner, by general circular or bulletin notice posted on the Bulletin Boards, or in the books provided at Terminals, Shops, Stations and Offices for such purposes.

If the Railway Management accepts the recommendation of the Board regarding the reinstatement of these three men, (Messrs. Palmer, Moore and Higgins) it should remove the real grievance, leaving open only the question of interpretation of President Hanna's declaration of policy,—a question of outstanding importance which, I understand, Parliament alone has the power to decide.

Therefore, believing that satisfactory adjustment, insuring continuance of the cordial relations and co-operation which has always existed between the officers and employees of these railways, must certainly be in the best interests of all concerned, I earnestly recommend that the matter be given the most serious consideration and, if deemed necessary, finally disposed of by special legislation.

Respectfully submitted,

(Sgd.) F. H. McGUIGAN.

FURTHER REGULATIONS AFFECTING WESTERN COAL MINERS

TEN new orders have been received from the Director of Coal Operations for Alberta and Eastern British Columbia.* Order No. 155 confirms an agreement between the Western Canada Coal Operators' Association and the United Mine Workers of America. Order No. 156 increases the selling price of bituminous coal and lignite. Order No. 157 increases the price of coke, and Order No. 158, the price of anthracite. Orders Nos. 159 and 160, relate to rates and conditions at the mines of the Canmore Coal Company. Order No. 161 has reference to the price charged for powder by the Rosedeer Coal Mining Company of Wayne, Alberta. Order No. 162 has reference to a dispute over the contract rate for work at the mines of the Canmore Coal Company. Order No. 163 relates to a dispute at the Bankhead Mines of the Canadian Pacific Railway Company regarding payment for the erection of timber in cross-cuts. Order No. 164, has reference to the price charged for powder at the mines of the Jewel Collieries, Ltd., Wayne, Alberta.

ORDER No. 155.—This order confirms an agreement entered into between the Western Canada Coal Operators' Association and the United Mine Workers of America dated October 25, 1920, providing for an additional amount of \$2.50 per day for day men over that paid on October 31, 1919, and an additional amount for boys equal to that given in the competitive field. In both cases the 92-cent war bonus is included.

ORDER No. 156.—An increase of 60 cents per ton is authorized in the selling price of bituminous coal in areas east and west of Crow's Nest Pass and west of Edmonton, Brazeau and Canmore; an increase of 60 cents per ton is au-

thorized for the price of lignite coal in the Drumheller area, and an increase of 65 cents per ton in the Lethbridge area, from October 25.

ORDER No. 157.—An increase of \$1.00 per ton in the price of coke is authorized in areas east and west of Crow's Nest Pass from October 25.

ORDER No. 158.—Mines of the Canadian Pacific Railway Company at Bankhead, Alberta, are authorized to increase the price of anthracite coal 85 cents per ton from October 25.

ORDER No. 159.—This order provides for rates and conditions at the mines of the Canmore Coal Company, Limited, to be in effect until March 31, 1922. Upon application of the management of the company the price of \$18.20 per lineal yard is fixed for Number Four Gangway in the Carey seam, including handling coal and rock.

The employees of the company claimed that extra payment should be allowed for the erection of post timbers and lagging in the Stewart seam, on account of the change in pitch of the seam. It was ruled by the Director that the contract when made specified that the rate paid for this class of work included the erection of post timbering and lagging, and the contention of the employees, therefore, was not sustained.

ORDER No. 160.—The employees of the Canmore Coal Company made application for payment for the overpushing of cars in addition to the rate specified in the contract. As this rate was arrived at by mutual agreement between the management of the company and its employees, and was inserted in the contract at the request of the chairman of the miners' scale committee, the Director ruled that it should

*For details of previous orders see LABOUR GAZETTE, October, 1920, p. 1290, and various preceding issues.

continue during the life of the agreement.

A claim made by the employees for payment for the overturning of cars when required to be done by the miners, was also disallowed, as the custom had been in existence practically since the inception of the mine, but the Director declared that the custom should be discouraged as far as practicable.

The miners of the Canmore Coal Company made further claim for payment for over-shovelling coal, on the basis of 72 cents per lineal yard from 12 to 21 feet, \$1.44 from 21 to 30 feet, and \$2.88 from 30 to 40 feet. The contract provides payment for shovelling coal in the Stewart seam on the basis of 55 cents per lineal yard if shovelled from 25 to 35 feet, and \$1.10 per lineal yard if shovelled from 35 to 60 feet. The Director ruled that the application for extra remuneration was not in order, and that the rate as applied to the Stewart seam should also apply to other seams at that mine.

ORDER No. 161.—A dispute arose at the mines of the Rosedeer Coal Mining Company at Wayne, Alberta, regarding the price of powder supplied to the miner. The clause in the agreement with reference to the subject states: "When explosives supplied are being sold to the miners, they shall be furnished at cost price which shall include handling, transportation and insurance." After investigating figures submitted by the company, the Director decided that the price in this instance should be \$4.24 per keg. As shipments of powder vary in price from time to time this decision had reference only to the consignment in dispute.

ORDER No. 162.—A dispute arose at the mine of the Canmore Coal Company regarding the contract rate for work in the Carey seam. The employees claimed that conditions had changed and that the amount of rock in the coal exceeded that which existed

when the agreement was made. The Director stated that a clause in the agreement provided that "when a miner's working place becomes deficient owing to any abnormal conditions—preventing him from earning the minimum wage of \$6.35 per shift, the Company shall pay him a sufficient amount to secure him the said minimum, providing he had done a fair day's work." He found that the average earnings of the contract miners in this seam amounted to from \$8.25 to \$8.55 per day. He therefore decided that as the earnings of the men employed at this work were above the minimum provided their complaint was not substantiated.

ORDER No. 163.—The employees at the Bankhead mines of the Canadian Pacific Railway Company claimed that they should receive extra payment for the erection of timber in cross-cuts in Number 0000 seam, and that formerly when this work was done they had received extra remuneration for it. The Company stated that no extra remuneration was allowed for this work, and that no official had authority to compensate any workman for it. The clause in the agreement covering this class of work reads as follows: "Cross-cuts (between breasts) 10 feet wide inside of timber by height of seam, \$5.25 per lineal yard, including single timber lagged." The Director found that from this wording the driving of the cross-cuts included the erection of timber at the price mentioned, namely \$5.25 per lineal yard. He therefore declared that the contention of the employees was not substantiated.

ORDER No. 164.—A dispute arose at the mines of the Jewel Collieries, Limited, Wayne, Alberta, regarding the price of powder supplied to the miner. It was mutually agreed to accept the price of \$4.24 per keg as fixed by Order No. 161 in the case of the Rosedeer Coal Mining Company. This agreement was confirmed by the Director.

STRIKES AND LOCKOUTS IN CANADA DURING 1920

DURING the year 1920 there was reduced strike activity in Canada and a consequent reduction in time loss. In fact, the time loss due to strikes was practically back to the average of the past 20 years.

There were 285 strikes and lockouts in Canada during the calendar year. Of this number, fourteen were carried over from 1919, making a net total of 272 strikes commencing in 1920. The number of employees involved in the 285 disputes was 52,150 and the number of employers was 1,272. The total time loss was estimated at 886,754 working days. This is ascertained by multiplying the number of men directly affected through a strike or lockout by the number of working days they are so affected during the time the firm or establishment is involved.

A strike or lockout, counted as such by the Department of Labour, is a cessation of work involving six or more employees and of not less than forty-eight hours' duration. Unless a dispute corresponds to this definition it is not classified as a strike or lockout, and is not included in the officially published statistics, although, for Departmental purposes, it is recorded. There were 47 of these disputes involving 4,759 employees and a time loss of a 4,507 working days during 1920.

There were several prominent strikes which contributed largely to the total time loss. Among these were: A strike of shipyard employees at Halifax from June 1 to August 11, involving 2,000 employees and a time loss of 104,000 working days; a strike of power development employees, engaged on the Chip-pawa canal project, from June 19 to July 12, involving 2,000 employees and a time loss of 36,000 working days; a strike and lockout of steamfitters, metal workers and machinists at Montreal, from August 13 to August 31, involving

3,000 employees and a time loss of 48,000 working days; and a strike of miners in the Alberta coal fields from October 5 to October 19, involving 3,402 employees and a time loss of 38,075 working days.

In about 3 per cent of the strikes, 1,000 or more employees were involved, and in about 60 per cent of the strikes less than 100 employees were involved. As to duration, 46 per cent of the strikes were in existence for 10 days and under; about 57 per cent were under 15 days' duration, and about 22 per cent were over 30 days' duration. Four were un-terminated at the end of the year.

Classified by provinces, Ontario had more strikes than any other province, with 35.8 per cent of the total. Quebec was second with 18.6 per cent and British Columbia third with 18.2 per cent. Ontario also had the greatest time loss, 228,992 working days, or nearly 26 per cent of the total, having been lost through strikes in this province. Quebec had the next largest number in this respect also with a loss of 221,328 working days, or 25 per cent of the total.

The class of industry most affected during 1920 was Metals, Machinery and Conveyances in which there were 65 strikes, involving 13,250 employees and a time loss of 349,295 working days. Forty-five strikes, involving 11,790 employees and a time loss of 165,509 working days, occurred in the Mines, Smelters, Quarries and Clay Products group. Thirty-four strikes, involving 4,840 employees and a time loss of 72,878 working days occurred in the Building and Construction group. Thirty-three strikes, involving 3,852 employees and a time loss of 79,054 working days, occurred in the Lumbering industry. The above four industrial groups sustained the greatest time loss through strikes.

Classified by causes, 205 of the 285 strikes recorded involved wages. Of this number, 134 were solely for increased wages, 40 for increased wages and shorter hours, 24 for increased wages and other changes, and 7 were because of a reduction in wages. Twenty-one strikes involved union recognition or were in protest against non-union labour, and 22 strikes were in protest against discharge of employees.

The record shows that 125 of the strikes terminated in favour of employers and 66 in favour of the employees; 69 were compromise settlements, while 25 were indefinite or unterminated.

As regards methods of settlement 116 strikes terminated as a result of direct negotiations between the parties in dispute, 42 terminated through the efforts of conciliation or mediation (almost entirely of the Department of Labour),

4 by arbitration and 7 by the operation of the Industrial Disputes Investigation Act. In 57 strikes, the employees resumed work on their employers' terms, and in 36 strikes the strikers were replaced.

There were several disputes—notably those of moulders at Hamilton, Preston and Collingwood, painters at Windsor, machinists at St. John, engineers at Hamilton and plumbers and steamfitters at Vancouver—which the Unions concerned still regarded as unterminated at the end of the year, but in which conditions were no longer affected or which ceased to come under the Department's definition of a strike.

The accompanying tables give in statistical form particulars of the trade disputes in Canada during 1920, with a summary of the record for the past twenty years.

TABLE I.—RECORD OF LABOUR DISPUTES BY YEARS

Year.	No. of Disputes		Disputes in existence in the year.		
	In existence in the year	Beginning in the year	Employers involved	Employees involved	Time loss in working days
1901.....	104	104	273	28,086	632,311

*These strikes resulted from the objection of certain employees to sign a compulsory work off for dues payable to the U. M. W. of A. in conformity with Order No. 141 of the Director of Coal Operations.

STRIKES AND LOCKOUTS IN CANADA DURING JANUARY, 1921

SIX strikes, involving 560 employees were reported as having commenced during January. There were in existence at some time or other during the month 10 strikes, involving about 964 workpeople. The total time loss on account of industrial disputes was estimated at 15,951 working days, as compared with 14,654 in December, 1920, and 35,535 in January, 1920. The time loss occasioned by the 6 strikes which began in January was 6,031 working days,

while a loss of 9,920 is charged to the four strikes that commenced prior to January. Termination was reported in the case of one strike which commenced prior to January. Four strikes commencing during January terminated during the month, leaving the following five strikes affecting 384 workpeople on record on January 31: plumbers, Montreal; railway employees, Sydney; garment workers, Sault Ste. Marie; spinners, Guelph and shoe workers at Montreal.

Disputes by Industries

The following is a review of the disputes by industries in the order in which they appear in the statistical table. A brief summary is given of the more important strikes.

LUMBERING.—The strike of 60 loggers at Jackson Bay, B.C., which commenced on November 14, 1920, in protest against reverting to piece-work, terminated on January 28, the strikers being replaced. One hundred shingle makers at New Westminster struck against a 20 per cent reduction in wages. Work was resumed a week later, the employees accepting the reduction.

BUILDING AND CONSTRUCTION. — The strike of plumbers in Montreal which commenced on October 4, 1920, was un-terminated. Six hundred employees were involved at the commencement of

the strike, and at the end of the month, there were 175 still involved.

METALS, MACHINERY AND CONVEYANCES.—The strike of railway employees at Sydney, which commenced on November 22 for increased wages, was un-terminated at the end of the month. Over three hundred shipyard employees at Victoria struck on January 19 in protest against a reduction in wages. The strike was terminated on January 31, the employees accepting a wage reduction of 50 cents per day.

PRINTING AND PUBLISHING. — An alleged lockout of 78 employees in the printing trade occurred at Vancouver on January 3, when a dispute arose over a new wage schedule. The dispute was temporarily settled on January 18, when the matter was referred to arbitration.

STRIKES AND LOCKOUTS DURING JANUARY, 1921.

Industry or occupation.	Particulars.	No. of employees affected	Time loss in working days
Strikes commencing prior to January, 1921.			
LUMBERING:— Loggers, Jackson Bay, B.C.	Commenced November 14, 1920. Men objected to being put on piece-work. Settled by replacement of strikers. Work resumed January 28.	60	1,320
BUILDING AND CONSTRUCTION:— Plumbers, Montreal, Que.	Commenced October 4. For increased wages. Un-terminated.	175	4,375
METALS, MACHINERY AND CONVEY- ANCES:— Employees of steel and coal com- panies, Sydney, N.S.	Commenced November 22. For increased wages and im- proved working conditions. Un-terminated.	150	3,750
LEATHER:— Shoe workers, Montreal, Que.	Commenced November 8. Against a reduction in wages. Un-terminated.	19	475
Strikes commencing during January 1921.			
LUMBERING:— Shingle makers, New Westminster, B. C.	Commenced January 1. Against a reduction in wages. Settled by negotiations; reduction accepted. Work resumed January 8.	100	600
METALS, MACHINERY AND CONVEY- ANCES:— Boilermakers, patternmakers, etc., Victoria, B.C.	Commenced January 19. Against a reduction in wages. Settled by negotiations; reduction accepted. Work resumed January 31.	325	3,575
WOODWORKING:— Piano workers, Toronto, Ont.	Commenced January 6. Against a reduction in piece-work prices. Settled by mediation of Department of Labour; reduction accepted. Work resumed January 15.	17	153
PRINTING AND PUBLISHING:— Printers, Vancouver, B.C.	Commenced January 3. Dispute over wages. Settled by negotiations; men returned to work on January 18 pending a decision of newspaper scale now in arbitration.	78	1,053
CLOTHING:— Garment workers, Sault Ste. Marie, Ont.	Commenced January 17. Men desired piece-work instead of weekly work. Un-terminated.	14	182
TEXTILES:— Spinners, Guelph, Ont.	Commenced January 11. Against a reduction in wages. Un-terminated.	26	468

STRIKES AND LOCKOUTS IN THE UNITED KINGDOM DURING DECEMBER, 1920

THE following details with regard to strikes and lockouts in the United Kingdom during December, 1920, based on returns from employers and workpeople, are taken from the January issue of the British *Labour Gazette*.

NUMBER, MAGNITUDE AND DURATION.—The number of trade disputes, involving a stoppage of work, reported to the Department as beginning in December was 34, as compared with 60 in the previous month, and 61 in December, 1919. In these new disputes nearly 62,000 workpeople were directly involved, and over 2,000 indirectly involved (*i.e.* thrown out of work at the establishments where the disputes occurred, though not themselves parties to the disputes). In addition to the numbers involved in new disputes, nearly 8,000 workpeople were involved, either directly or indirectly, in 65 disputes which began before December and were still in progress at the beginning of that month. The total number of disputes in progress in December was thus 99, involving about 72,000 workpeople, as compared with 1,138,000 workpeople (including about 1,100,000 workpeople in the coal mining industry) involved in 136 disputes in progress in November, 1920, and 110,000* workpeople involved in 107 disputes in progress in December, 1919.

CAUSES.—Of the 34 new disputes, 11, directly involving about 2,200 workpeople, arose on demand for advances in wages; 6, directly involving about 10,700 workpeople against proposed reductions in wages; 3, directly involving about 2,100 workpeople, on other wages questions; 9, directly involving about 46,000 workpeople, on questions respecting employment of particular classes or persons; and 5, directly involving about 600 workpeople, on other questions.

RESULTS.—During December settlements were effected in the case of 16 new disputes directly involving about 47,500 workpeople, and 15 old disputes, directly involving about 7,200 workpeople. Of these disputes 4, directly involving about 400 workpeople, were settled in favour of the workpeople; 18, directly involving about 6,200 workpeople, in favour of the employers; and 9, directly involving about 48,100 workpeople, were compromised. In the case of 8 disputes, directly involving about 4,200 workpeople, work was resumed pending negotiations.

The following table classifies the disputes by groups of trades:

Groups of Trades	Number of Disputes			Number of workpeople involved in all disputes in progress in December.	Aggregate duration in working days of all disputes in progress in December.
	Started before December 1st.	Started in December	Total		
Building.....	12	4	16	4 800	24,000
Mining and Quarrying.....	7	6	13	47,400	151,000
Metal Engineering and Shipbuilding	15	7	22	13,600	189,000
Textile and Clothing	8	1	9	1,200	14,000
Transport.....	5	5	10	2,700	26,000
Other Trades.....	18	11	29	2,300	25,000
Total, Dec., 1920..	65	34	99	72,000	429,000
Total, Nov., 1920..	76	60	136	1,138,000	3,631,000
Total, Dec., 1919....	46	61	107	* 110,000	* 1,808,000

* Revised figures.

The majority of the workpeople involved in December, 1920, were accounted for by two disputes, viz., a strike of 45,000 coal miners, etc., in the Rhondda district, which lasted three days, and a strike of joiners and carpenters in shipyards throughout Great Britain, involving about 10,000 workpeople, which

began on December 1, and was still in progress at the end of the month.

Of the 429,000 working days lost in December by all disputes in progress, about 97,000 were lost by disputes which began before December, and were still in progress at the beginning of that month, and nearly 332,000 by disputes which began in the month.

VISIT TO INTERNATIONAL LABOUR OFFICE OF BRITISH EMPIRE DELEGATES TO THE LEAGUE OF NATIONS ASSEMBLY

(Reprinted from Bulletin No. 15-16, of the International Labour Office.)

THE Right Honourable A. J. Balfour, M.P., the Right Honourable G. N. Barnes, M.P., representing the British Delegation, the Right Honourable C. J. Doherty, and the Right Honourable N. W. Rowell, representing the Canadian Delegation, visited the International Labour Office on December 11 last. They were received by the Director, M. Albert Thomas, and the Deputy-Director, Mr. H. B. Butler, and made a tour of the building, where they saw the organization adopted for collecting and distributing information on labour questions from all parts of the world, and for carrying out the various duties imposed by the Peace Treaty, and by the Washington and Genoa Conferences.

M. Albert Thomas, in welcoming them, said that he was very glad to have representatives of the Anglo-Saxon world at the Office to see for themselves in what manner the duties imposed upon it by the Treaties of Peace were being fulfilled. In spite of numerous difficulties, the Office now had a homogeneous and devoted staff who worked together in harmony with the same object in view. He was completely confident as to the future. The Office not only had the support of the Governments, but that of the great organized forces of society, that is to say, the Employers' Associations and the Trade Unions.

In order to bring about international co-operation, added M. Thomas, every country must give of its best to the common experience. The young countries had much to teach the old ones, and some of the quite new countries, such as Czecho-Slovakia, had shown themselves among the foremost in working whole-heartedly with the organization. The experiments which were now being made in social and industrial matters made it essential that their experience should be made available to everyone. But, after all, it was mainly the old industrial countries, such as France and Great Britain, which must be the back-bone of the Organization. They both had a long liberal tradition, and a record of constant progress in matters of social legislation.

Mr. Butler said how glad the English-speaking section of this staff were to see the British delegates. He supposed they all—the French staff as well as the English—sometimes felt a long way from home. It was on occasions like this, when people from their own homes came here and took an interest in what they were doing, that they felt encouraged and confirmed in the idea which they all had, that they were there for a good purpose. If they did not all feel that they would not stay there. After all, all of them would prefer to be living in their own land; although Geneva was

a very pleasant place. They were therefore happy to welcome the leaders of national life in the different countries of the Empire and to think that they might count on their support.

Mr. Balfour made the following reply: "I desire to speak on my own behalf, and I hope that my colleagues from the Dominions will permit me also to speak on their behalf, in giving you our most cordial thanks for the invitation you have conveyed to us to come and see you at work and for the admirable survey which you have allowed us to make of the extent of your labours. Mr. Butler, in his concluding observations, described the feeling of those who, in a sense, are exiles here from their native land and how they were sustained partly by the idea that their work was being appreciated, but also by the thought that men from their own English-speaking homes sympathized with their efforts and followed them with satisfaction—with more than satisfaction—with the consciousness that what they were doing was for a cause in which the whole world is interested.

"You, M. le Directeur, dwelt in your speech upon the difficulties, the inevitable difficulties, which beset so great a task. These difficulties are indeed immense. We of the League of Nations are struggling against the same difficulties, or parallel difficulties, and all that you feel with regard to your troubles, we, from our point of view, feel also with regard to ours. Indeed, I am sometimes amazed at the rather contemptuous tone in which the labours of the Conference at Versailles, the Peace Conference at Versailles, are spoken of by persons who conceive themselves the intellectual critics of the world. In my opinion, the work done in 1919 was like all human work, imperfect, needing to be revised and improved and brought up to meet either old conditions imperfectly understood or new conditions imperfectly foreseen. That is inevitable. But when we remember that in the Treaty of Versailles mankind at large is invited to unite together for such tremendous purposes as that of preserving peace, and of

raising the conditions of life of the workers throughout the world, when we reflect that in the few months that have elapsed since then, great organizations, so widespread, so complicated as the League of Nations and the International Labour Office have been established, and have done so much work and are doing, and look forward to doing more work in the future, I think that the sober critic, looking on that must think that it is one of most marvellous performances that human intelligence, that any human effort has ever been able to accomplish.

"I am not of those who have said that the International Labour Office is bound to be the huge success that everyone round this table hopes it will be. Failure is always possible, but what is of far greater moment, success is also possible; and you, M. le Directeur, after dwelling upon the difficulties of your task, upon the difficulty of bringing into one harmonious machine co-operative elements from 48 nations, a number which will doubtless increase, you gave as one of your reasons for hope the fact that international co-operation was already reflected in the most admirable and perfect form in the working of your staff.

"You reminded us that your staff is drawn from a large number of these nations and that, drawn as they were from different quarters of the globe, with different traditions and using different languages, they, nevertheless, have been welded into an organic whole conscious of its own life, firmly believing in its own future, and though not oblivious of the difficulties which from day to day are inevitable, feeling a faith and confidence in the future which is before them. The task of international co-operation which you have accomplished in this building is in itself a very encouraging augury of what a larger co-operation between the self-governing units of the world will be able to accomplish in the future.

"I think that is all I need say, but I may perhaps be allowed to end with one remark on a statement of yours with which I most heartily agree. You stated towards the end of your speech, that'

after all, Treaties and Conventions were much. They are necessary and not only are they necessary, but they are all-important. But you added that these instruments, these paper documents, these signatures of diplomats and ministers were nothing and less than nothing, unless there is behind them that spiritual assistance which each nation ought to give to these great international endeavours according to the measure of its power. We dwell, and we rightly dwell, upon the difficulties which national differences make in international co-operation, but there is another side to that question. If nations are different,

and possibly their hereditary qualities, certainly their historical evolution have produced differences, these differences properly used may bring into the common stock ideas, methods and aspirations, which no single nation, working by itself and for itself, would be able to create. If, therefore, every nation will take your advice and will bring to this international work all that it has of its best, then, and perhaps then only, shall we see how great is the special work that the Treaty of Versailles, which you are engaged in carrying out, may accomplish for the benefit of mankind. We thank you".

INQUIRY INTO ALLEGED DECREASE IN PRODUCTION BY LABOUR

Result of Questionnaire issued by Department of Labour in August, 1920

CERTAIN representations having been made to the Department of Labour to the effect that employers had to contend with a decrease in production due apparently to slackened effort on the part of their employees, an inquiry was made by the Department last August for the purpose of obtaining authentic information on this subject. Questionnaires were sent to about 6,200 employers, and replies giving the information desired were received from 4,106 firms employing about 455,400 workers. Of this number 1,304 employers (about 33 per cent of those answering) having 172,100 workers (about 38 per cent of the workers covered in the answers) stated that there had been a falling off in production on the part of their labour force. On the other hand, 2,802 employers who had on their payroll about 283,300 workers, reported that their employees had not shown any decline in production. Supplementary information received showed that conditions were improving in this respect and that the workers were getting back to their former normal output. Among

the causes most frequently given for decreased production were the following: so many men had been engaged at other than their regular jobs during the war, and on resuming their occupations had taken some time to get back to their normal capacity; many skilled workers had been killed at the war and their substitutes had not had time to become as efficient; many skilled workers had had their capacity reduced by wounds, disease, etc. Other causes of reduced production were stated to be shortage of labour and high wages in general; market conditions including increased costs, shortage of materials, luxury tax, etc., reduction of hours of labour, and general unrest.

Taken by provinces and industries, the result of the questionnaire shows little variation from the general result stated above, except that in Alberta the employees of firms reporting "Yes" to the question whether there was any falling off in production numbered more than those of firms reporting "No". This was attributed to the high percentage of firms reporting "Yes" in the mining industry, which was the only

industrial group in which the firms reporting "Yes" exceeded those reporting "No." In two groups of industries, lumbering and mining, the number of

employees in the "Yes" column exceeded those in the "No" column. In the manufacturing group less than 33 per cent of the firms reported "Yes."

RAILWAY LABOUR STATISTICS FOR 1919

THE railway statistics of Canada for the year ended June 30, 1919, have recently been issued by the Dominion Bureau of Statistics in pursuance of an Order-in-Council under the Statistics Act transferring the compilation of these statistics from the Department of Railways and Canals to the Bureau. The number of employees, which had been reduced during the war, was practically the same in the period under review as in 1914, but salaries and wages showed an increase over the latter year of 87 per cent, or \$97,177,023. The following table shows for the several years from 1910 to 1919 the number of employees on steam railways, the amounts paid in salaries and wages, with the ratio of salaries and wages to gross earnings and operating expenses:

STEAM RAILWAYS.

Year	Number of employees	Salaries and wages	Ratio to gross earnings	Ratio to operating expenses
1910.....	123,768	\$67,167,793	38.61	55.78
1911.....	141,224	74,613,738	39.53	56.94
1912.....	155,901	94,237,623	39.79	57.92
1913.....	178,652	115,749,825	45.09	63.59
1914.....	159,142	111,762,972	45.97	62.43
1915.....	124,142	90,215,727	45.15	61.09
1916.....	144,770	104,300,647	39.82	57.95
1917.....	146,175	129,626,187	41.85	58.34
1918.....	143,493	152,274,953	46.14	55.59
1919.....	158,777	208,939,995	54.56	61.12

The total number of hours worked during 1919 was 431,397,059. Of the employees included in the total wage

payments the largest group was composed of those engaged in Maintenance of Road and Equipment and Construction, who received \$93,308,553. Next in order of amounts received came the group comprising agents, operators, etc., with \$42,332,795. Road trainmen, including engineers, brakemen, conductors, etc., received \$37,556,657, while office staffs received \$22,985,070, and yard trainmen, \$11,353,454. The highest paid employees were the road passenger engineers and motormen whose average hourly compensation during the year amounted to \$1.017; train despatchers and directors, with \$0.957 per hour; and road freight engineers and motormen and road passenger conductors, with \$0.798.

Fatalities to railway employees during 1919 totalled 151, the number killed in each class of occupation being as follows: trainmen, 77; trackmen, 50; switch tenders, 7; stationmen, 6; shopmen, 5; telegraph employees, 1; other employees, 5. Besides those killed 1,860 employees were injured in accidents on the railways during the year.

On electric railways the average number of employees during 1919 was 17,242, the total amount of wages and salaries paid during the year being \$17,210,851. In the preceding year the figures were 11,646 employees receiving \$11,840,863, while in 1915 the number of employees was 14,795, wages and salaries amounting to \$10,781,199. The fatalities of employees on electric railways totalled 37 during the year, 621 others being injured in the course of their employment.

ANNUAL REPORT OF THE QUEBEC DEPARTMENT OF PUBLIC WORKS AND LABOUR

THE report of the Deputy Minister of Labour for Quebec, which is included in the Annual Report of the Department of Public Works and Labour for the year ending June 30, 1920, contains an account of the organization and work of the various branches of the Labour Department. The inspection of industrial establishments, which is considered the most important work of the Department, is carried on by ten inspectors, three inspectresses, and a deputy chief. Domestic workshops and mines only are exempt from inspection. It is stated that the inspectors are frequently able to act as conciliators between workers and their employers, thus supplementing the work of the Conciliation Board. This board consists of conciliation officers who are attached to the more important industrial centres of the province for the purpose of settling trade disputes on the spot. Several examples are given in the report of successful action by these officials in bringing the contending parties together and thus anticipating and preventing strikes.

During the past year the work of registering children under the Quebec Industrial Establishments (Amendment) Act, 1919, was commenced. The registration in Montreal showed that the number of illiterate French-Canadian girls did not exceed 4 per cent, and the number of illiterate French-Canadian boys barely exceeded 8 per cent, though the proportion was slightly higher among the children of immigrants. Children were also registered at Joliet, Hull, Valleyfield, Beauharnois, Quebec, Three Rivers, Shawinigan Falls, and Montmorency. It is felt that the new law is destined to play an important part in serving as a barrier against the exploitation of children, both by parents and by employers.

The various private employment offices were regularly inspected before

leases were granted, and, in compliance with agreement between the provincial and the federal employment service, four applications of private individuals to open new offices were refused, and the permits of three others were cancelled. The work done by the five provincial employment offices at Quebec, Three Rivers, Montreal, Hull, and Sherbrooke, respectively, during the year ended June 30, 1920, was as follows: Civil offices—number of unemployed registered, 20,692; vacancies notified by employers, 19,837; persons referred to employers, 17,038; persons reported as placed, 13,608. Military offices—unemployed returned soldiers registered, 33,765; number referred to employers, 25,227; soldiers reported as placed, 19,701. The classes of workers chiefly benefited by these offices were lumbermen, labourers, and building contractors' workmen.

With respect to hours of labour, the report states that hours for women and children in the textile industry are limited to 55 per week, but in other industries these workers may be employed for 10 hours a day. In the larger centres, however, very few factories work more than 9 hours a day. In answer to a criticism that has been made by organized labour of a law which permits the extension of women's and children's working hours up to 9 p.m. for a period not exceeding six weeks in each year, the report states that such permission is only granted under special circumstances, where enforced idleness would result in injurious losses to other workers or to industry. The Provincial department, it is stated, "has never been in favour of such an extension of hours for women, children, or men, considering that all extra wages so obtained are generally got to the detriment of health." During the year 34 applications were received from manufacturers

for permits to employ women and children at overtime work, but 26 of these were refused.

The total number of accidents reported to the department during the year was 829, being an increase of 11 over the previous year. There was a decrease of 7 in fatal accidents, and of 34 in serious accidents, but an increase of 52 in slight accidents. With respect to safety devices it is stated that there is evidence that in some sawmills the workers produced from 20 to 25 per cent more with a guarded than with an unguarded machine, and that the same applies to presses for stamping metal.

With respect to workmen's compensation, the report draws attention to the report of the Commission on Uniformity of Labour Laws appointed by the federal Government, and comments favour-

ably on the working of the Ontario Workmen's Compensation Act.

An interesting feature noted during the year is "the peaceful invasion of the great American manufacturers, coming to establish important workshops and factories in the Province. Sherbrooke, St. Hyacinthe, Drummondville, as well as the outskirts of Quebec and Montreal, are increasing in importance and population." On the other hand there has been a "considerable decrease in the activity of certain industries that were very flourishing during the war."

In commenting on the meeting of the staff of the Labour Department in Montreal the report states that this innovation was "highly appreciated by our officers. Interesting discussions took place on all the most prominent features of our labour laws, and practical suggestions resulted from these debates."

APPRENTICESHIP COUNCIL FOR THE BUILDING TRADES

Approved by the National Joint Conference of the Building and Construction Industry of Canada

THE National Joint Conference Board of the Building and Construction Industry, at a special meeting held in Montreal on January 3, adopted a plan for a National Apprenticeship Council of the Building Industry. The constitution of the New Council is on the lines proposed by Mr. William Baugh, President of the Montreal Metal Trades Council, and described in the *LABOUR GAZETTE* for October, 1920. The report of the Apprenticeship Committee, as adopted by the Board, recognizes the lack of inducements for boys to enter the building trades with any assurance that they will receive instruction that will make them efficient mechanics. The defects of the present system are stated to be neglect of the avenues of technical education; the intermittent nature of the employment of many boys without regard to their welfare; the practice of

some employers of using boys only during rush periods, with consequent loss to the boy of opportunity for acquiring adequate knowledge of the trade. The problem was rendered more acute by the wastage of man-power by the war, and its seriousness is held to justify the present solution and to engage the co-operation of the building organization in applying it in practice. While good results are being obtained by various schemes now in operation in a number of trades, the report dwells on the advantages of a new scheme on a nation-wide scale and concludes: "Our hope of meeting the situation lies in the revival of a well-established and defined apprenticeship system, with a very definite objective, under the supervision and joint control of our respective organizations."

The following scheme for a National Apprenticeship Council was approved:

National Apprenticeship Council

1. There shall be established a representative body from within the Organizations of the Building Industry, charged with the Advisory and Supervisory functions as set out below. This Body to be known as the National Apprenticeship Council of the Building Industry.

2. The National Apprenticeship Council shall consist of:

(a) One employer for each branch of the Building Trade,

(b) One Journeyman from each branch of the building trade,

(c) Two Architects and two Industrial Engineers.

Who shall be members of their respective organizations and parties to the rules governing the Council.

3. The Apprenticeship Council shall have the power to make such regulations for the conduct of the Council and the appointment of such officers as they from time to time determine.

4. Local Councils shall be formed under the authority of the National Council, with power to carry out the rules and objects of the Council as hereinafter set forth.

5. Local Councils shall be constituted on the same basis as the National Council, but shall have power to modify the number if in their judgment it is desirable.

6. The National Council shall issue forms of indenture for each trade, to be used exclusively by all employers parties to this scheme and apprentices availing themselves of its operation.

7. The boys shall be apprentices to the employer, and the employer shall undertake to give every apprentice the fullest opportunity of efficiency learning the trade:

(a) in the workshop and on the job,

(b) by attendance at a Technical School for about one-sixth of his time, or not less than two half days each week during the Employer's time and without deduction from wages,

(c) the apprentice shall be bound to attend an evening course at least two evenings each week during school terms.

8. The Council shall assume responsibility with the employer for providing appropriate facilities for the apprentice to learn all branches of his trade, and to this end shall become party to the indenture. The responsibility is, however, subject to the right of the Council to dissolve the apprenticeship in case of serious default on the part of either parties.

9. The Local Apprenticeship Council shall prescribe the terms and conditions of apprenticeship to the various trades in each area, subject to the approval of the National Council. It shall determine the period of apprenticeship, the rate of wages to be paid, the hours of labour, the working conditions, and all other matters relating to the training of apprentices.

10. The Local Council shall arrange where possible with the local Educational Authorities for classes for apprentices, and make arrangements for the hours and period during which apprentices shall attend.

11. Local Councils can for cause cancel indentures when considered desirable or arrange for the permanent transfer of an apprentice from one employer to another.

12. An Examination Board of not less than three members shall be appointed by the Council and shall conduct the examination for apprentices at stated periods.

13. The Local Council shall determine the number of apprentices which may be necessary in their own area to maintain the efficiency, due regard being had to the possibilities for the future expansion or contraction and it shall regulate the admission of apprentices to the various trades in accordance with these conditions, and subject to the trade agreements existing between the employer and employees.

14. In order that apprentices working under the direction and supervision of the Council may have the best opportunity of obtaining a wider knowledge of their respective trades, it shall be open to the Council by agreement with the employers to arrange for short periods

of transfer or exchange of apprentices where it appears that by such transfer the apprentice shall acquire special knowledge or experience.

15. All complaints or disputes arising between employers and apprentices which cannot be settled between the parties in regard to the conditions of work, discipline, wages, or other matters, shall be referred to the Local Council, who shall have power to adjust such disputes, which shall be binding on all parties, subject, however, to appeal to the National Council.

This apprenticeship plan was approved by the Association of Canadian Building and Construction Industries at its annual conference at Winnipeg on January 19-21.

Details of a scheme of adult apprenticeship for the building trades in Great Britain, proposed by the British Government and approved by the Resettlement Committee of the Building Industry, were given in the January issue of the LABOUR GAZETTE. The operatives in the building trades have since taken a ballot on the proposed scheme and have rejected it by a large majority. The ground was taken that the workers now in the industry were fully able to meet housing needs by direct labour through contracts with the building guilds, and that the "dilution" of industry by the absorption of ex-service men was quite unnecessary and would not help the unemployment situation.

FATIGUE AND EFFICIENCY IN BRITISH IRON AND STEEL INDUSTRY

AN Industrial Fatigue and Research Board was appointed in Great Britain, in June 1918; jointly by the Department of Scientific and Industrial Research and the Medical Research Committee (now the Medical Research Council) to inquire into the general subject of industrial fatigue. On the suggestion of the Home Office a beginning was made with the iron and steel industry on the ground that the work in this industry is heavy, and the workers exposed to high temperatures; that many of the processes are continuous, and (at the time that the suggestion was made) were being worked with three shifts of eight hours each in some districts and with two shifts of 12 hours each in others, thus offering a good field for comparison; and that the Iron and Steel Trades Federation had recently appealed for the establishment of a general 8-hour shift at the end of the war. Shortly after the armistice the 12-hour shift ceased to exist in Great Britain, but the Board decided to continue the research by means of records made under the old 2-shift system. In June, 1919, the inquiry was abandoned in so far as it related to fatigue in individuals, as no

trustworthy test of such fatigue was known. Efforts are still being made, it is stated, to discover such a test, and if these are successful it is proposed to revive this part of the investigation at a later stage.

A recent report (Reports of the Industrial Fatigue Research Board, No. 5) summarises the results of the inquiry into fatigue and efficiency in the iron and steel industry. In each of the three main branches of the iron and steel industry, namely, the production of pig iron and of steel, and the rolling of steel, the investigators found wide variations in the efficiency with which human labour was utilized in the various works. The reduction in the length of shift from 12 hours to 8 hours led to very little increase of hourly output whether from the blast furnaces, the open hearth furnaces, or the rolling mills. "Though the men employed were mostly on a piece-work basis and had to suffer a considerable loss of wages when the hours were reduced, they seemed to be unable, of their own initiative, to increase their output to any considerable extent and thereby to make up for their loss. However, a great improvement of output

does appear possible if the employers and the men co-operate thoroughly to that end."

The latter opinion is supported by an instance where the interest of the men in their work was stimulated by the formation of a men's society: "Lectures relative to steel production were given by workmen and by managers, new methods of working were suggested and discussed, and if after due trial they were found to be of practical value they were permanently adopted. In consequence of these improvements and of the extra keenness of the men in working the furnaces the output of the hand-charged furnaces gradually increased to about 70 per cent above its previous value. This striking result, be it noted, was achieved without any substantial alterations of plant whatever. Moreover, the casting of steel was so much improved that the net final yield of saleable steel was raised some 30 per cent above the old level."

The investigators note that substantial improvements in plant depend on the management, and contrast the efficiency of plant outfits in various districts. They declare it probable that "if all the iron and steel works in the country adopted the most efficient methods they could on an average improve their output by something between 50 and 100 per cent. In other words they could enable their employees to earn more in 8-hour shifts than they had previously done in 12-hour shifts." The report admits that it would not be practicable in a short period to substitute mechanical charging for hand-charging of furnaces, to charge the open hearth furnaces with molten instead of cold iron, and to make all the other changes in plants that are suggested as necessary in the interest of efficiency. In the meantime, however, the investigators suggest that a technical inquiry into existing methods of production be instituted by a competent body of practical men.

Among other deficiencies in management is noted "a curious lack of provision" for the comfort of the men on the part of some employers: the blast fur-

nace barrow men for instance, are obliged to work day and night in the open, exposed to the weather, though galvanized iron roofing cost little and satisfied the men in the plants where it was erected. At many steel melting shops, again, no seats or shelters were provided for the men, though they were usually resting for half the time they were on duty. In one respect the workers are themselves to blame to some extent; steel melters, iron puddlers and crucible steel men work under such conditions that they sweat heavily, yet it is exceptional for one of them to carry a spare shirt, and many contract rheumatism by chills on their way home. Moreover, no lockers or other facilities are provided for them by the management, as a rule. A not infrequent source of fatigue was the unnecessary lifting of coal from the coal platform to the hopper of the furnace, when the platform could easily be raised two feet.

Among other facts noted by the report in connection with the iron and steel industry were the following:—Only 18 per cent of the furnaces inspected were mechanically charged, though four to eight times more men are required to charge furnaces by hand than by machine. Reductions in the hours of work of blast furnace men from 12 to 8 hours improved "time-keeping". The reduction of hours from 12 to 8 caused the total output to increase 9 per cent at one works, and 2 per cent at another, but the substitution of hot for cold metal caused a 30 per cent increase.

The output usually showed a seasonal variation, and at one works it was 11 per cent less in summer than in winter.

Intermittency in "tapping" the furnaces increases the fatigue of the melters and renders difficult the even supply of ingots to the rolling mills.

In the rolling mills the reduction of hours was not generally found to lead to any increase of output. Fatigue in the men stoking the boilers which supply a mill was shown by the fact that between 2 p.m. and 6 p.m., and again between midnight and 6 a.m. the steam pressure fell from 70 pounds to 62 pounds.

Sickness records of about 20,000 steel workers for six years showed that on an average the men lost 6.5 days per year from all causes. Steel melters, puddlers, tinplate and rolling millmen, working in high temperatures, showed considerably over the average amount of sickness. The excess of sickness among puddlers was due entirely to rheumatism and respiratory diseases, resulting from alternating periods of heavy and light work. Tinplate millmen, working continuously show no excess of sickness from these diseases.

In the mortality records the steel workers aged 25-65 showed a 5 per cent lower death rate than all males in the industry (occupied and retired), with less mortality from tuberculosis, but more from other respiratory diseases. Steel melters had a 20 per cent greater mor-

tality than all males, but the other men working at high temperatures, and the engine and cranemen, had a lower death rate. The blast furnace men had a considerably higher mortality than the steel workers, owing to their greater exposure to the weather. It is probable, however, as the report points out, "that all the records yield too low an estimate of death-rate, owing to withdrawals of some of the less vigorous men."

Reports have also been issued by the Industrial Fatigue Research Board on "Speed and Adaptation of Output to Altered Hours of Work;" "Individual Differences of Output in the Cotton Industry;" "Output in the Boot and Shoe Industry;" "Output in Silk Weaving during the Winter Months". (This report was noticed in the LABOUR GAZETTE for January, page 4).

RECENT DEVELOPMENTS IN VOCATIONAL EDUCATION IN CANADA.

Prince Edward Island

THE Navy League School of Navigation at Charlottetown, P.E.I., opened for instruction on January 11. This school provides instruction in all branches of navigation and is well equipped with models, signal devices, scientific instruments, maps, charts, etc., and the system of teaching is that of private coaching rather than class teaching. Each student must work through every problem of each lesson, the rate of progress being governed entirely by his own powers of application. Under this system students may be accepted at any time during the term.

New Brunswick

In addressing the Moncton Rotary Club on January 18, Mr. Fletcher Peacock, Director of Vocational Education for New Brunswick drew attention to the need of a vocational training school in that city. In referring to the educational system of New Brunswick, Mr. Peacock pointed out that it did not reach

the greater mass of workers as only fifteen out of one hundred pupils who had entered Grade I were to be found in later years in Grade VII; eight reached Grade IX, and five reached Grade X; less than three reached Grade XI. A secondary system of vocational education is needed, he believed, to look after those who leave school before completing their elementary education. Vocational education, Mr. Peacock stated, would lead to a better class of citizenship and better opportunities for the great mass of the people. The New Brunswick Government will bear the following proportion of expenses in connection with the development of vocational education; 60 per cent of teachers' salaries, 50 per cent of cost of equipment, and 25 per cent of cost of establishing a building.

Quebec

On January 19, the Council of the Montreal Board of Trade adopted a resolution stating that it unanimously endorsed the opinion expressed in the

resolution of the recent National Conference on Technical Education, which reads as follows:

Whereas the education of our new Canadians of foreign origin cannot be accomplished without the regular operation of the schools in non-English settlements; and whereas, this problem is one of national responsibility and national importance, quite beyond the ordinary financial possibilities of the Provinces;

Resolved that this Conference is strongly of the opinion that the Federal Government should, without delay, provide financial assistance to the Provinces, so that an adequate supply of specially selected teachers may be trained for this work, and provided in rural districts with permanent and attractive homes; Resolved further that copies of this resolution be forwarded to the Premier of Canada, to the Minister of Labour, and to the Minister of Colonization.

Ontario

The Advisory Industrial Committee of the Toronto Board of Education made the following recommendations at their first meeting of the new year, held on January 12: (1) That the Principal, Mr. A. C. McKay, be authorized to interview the Education Department with a view to securing approval of expenditure required in teaching horology and fine instrument making; (2) That, if the expenditure is approved by the Education Department the offer of the Ontario Horological School for the sale of their equipment be accepted.

Dr. McKay reported the following registration at the Technical School: Day Classes, 2,274; Evening Classes; 7,770—Total, 10,044.

The Educational Committee of the York County Council is taking steps to provide additional school accommodation which will be urgently needed next September when the Adolescent School Attendance Act comes into operation. The Council are preparing to submit a resolution to the Minister of Education

for Ontario, requesting him to introduce legislation which will make it possible for the Council as a whole to pay at least 50 per cent of the cost of building and maintaining high schools within its boundaries.

The Hamilton Board of Education have adopted a new schedule of teachers' salaries based on efficiency as well as length of service and other considerations. Efficiency is judged upon the following basis: (1) Personality—(a) appearance; (b) voice; (c) manner; (d) energy; (2) Ability—(a) teaching and questioning; (b) organizing; (3) Results—(a) class spirit; (b) deportment of pupils; (c) progress and proficiency.

The new plan is the result of careful study and the results will be watched with interest by Canadian teachers.

Unemployment in Hamilton has resulted in an increased attendance at the Technical School. Young men temporarily out of employment are receiving instruction in machine shop practice, wood working and electrical work. The Principal, Mr. G. L. Sprague, reports that he is now compelled to turn away applicants on account of the crowded condition of the classrooms. The attendance report for December, 1920, showed an enrolment of 537 in the day classes and 2,399 in the evening classes. Plans for an administration building containing additional classrooms have been approved by the Ontario Department of Education, and tenders will be called for in the near future.

The Niagara Falls Review of December 31, 1920, announces the opening of the new Technical School in that city. The work of the school is divided into three separate courses: (1) A technical course for boys and young men; (2) Home-making courses for girls and women; (3) A commercial course for boys and girls.

The cities of Windsor and Walkerville have decided to erect a modern technical school to serve both communities. The Technical School Board, or Technical Committee, is to be composed of four

members from each municipality and provision is made for the admittance of other urban centres which may later decide to join Windsor and Walkerville in the scheme. The financial responsibility of each municipality will be based upon the respective populations.

Alberta

The Convention of the United Farm Women of Alberta, held in Edmonton on January 18, passed a resolution recommending that the government provide facilities wherever conditions are such as to make it workable, to consolidate education so as to provide high school training for children in the rural districts.

British Columbia

Evening classes are being conducted in the new Technical School at New Westminster in commercial subjects, gasoline engineering, steam engineering, mathematics, machine construction and design, agriculture, conversational French, dressmaking and millinery. The courses are designed to directly benefit those who have already taken up a vocation. The training provided is supplementary to that received in the workshop or mercantile establishment, and is meant to prepare the way for promotion in the student's particular vocation.

It is expected that the new Technical School in Vancouver will be opened before the end of February.

RECENT EDUCATIONAL DEVELOPMENTS IN THE UNITED STATES

Federal School Bill for the United States

THE Smith-Towner bill, providing federal assistance for education and creating a Federal Department of Education, is now before the United States Congress and indications are that it will be accepted with few amendments. The bill, which has been amended to remove objection to centralized control, is described by the *New York Post* of January 15 as follows:

Courses of study, plans, and methods of carrying out the purposes and provisions of this act shall be determined by the State and local educational authorities of each State, and this act shall not be construed to require uniformity of courses of study, plans, and methods in the several States.

It is further provided that "all the educational facilities encouraged by the provisions of this act and accepted by a State shall be organized, supervised, and administered exclusively by the legally constituted State and local educational authorities of said State."

Another amendment adopted by the committee makes the plan for a department of education tie in closely with proposed reorganization of the Government departments. Whereas the old bill provided only for the

transfer to the new department of the existing Bureau of Education in the Interior Department, the amended measure includes in the Department of Education whatever bureaus Congress, through the new Congressional Commission, may assign to it.

In its main outlines the bill remains unchanged. It creates a Department of Education with a secretary of education in the President's Cabinet, and appropriates \$100,000,000 a year to be distributed to the States on the familiar half and half basis, the States being required to provide dollar for dollar as much as the National Government gives. Of this amount \$7,500,000 is to go for the instruction of illiterates, a similar sum for the education of immigrants, \$50,000,000 for the equalization of educational opportunity as between city and country, \$20,000,000 for physical and health education, and \$15,000,000 for teacher training.

The States, besides matching the appropriated dollar for dollar are required to maintain compulsory education of at least twenty-four weeks' duration every year, private and parochial schools satisfying this requirement, provided only that the language of instruction is English.

The department is allowed for its own expenses an appropriation of \$500,000, and must undertake researches in illiteracy, immigrant

education, rural education, physical education, teacher training, higher education, and other fields.

Schools for Marine Engineers

The United States Shipping Board, in an endeavour to increase the efficiency of marine engineers, is establishing and maintaining free schools in connection with universities. It is understood that the Shipping Board plans to have the schools taken over by the institutions in which they are conducted and incorporated as a part of the university training.

A school which has been established in

connection with the University of Washington specializes in the operation and repair of turbine engines and will be conducted during alternate months.

School of Citizenship, Chicago

The County Civil Service Commission of Chicago has inaugurated a course of studies for women known as the School of Citizenship. Graduates from this school may become directors of citizenship in schools or engage in the social service work of various organizations. Classes are being established in different parts of Chicago and throughout the State of Illinois.

ANNUAL CONFERENCE OF THE ASSOCIATION OF CANADIAN BUILDING AND CONSTRUCTION INDUSTRIES

THE Annual Conference of the Association of Canadian Building and Construction Industries took place at Winnipeg on January 19-21. The president, Mr. J. P. Anglin, occupied the chair.

The report of the Standing Committee on Labour as adopted by the Conference contained the following recommendations:

"That this conference appoint a committee of not less than three, nor more than five members to undertake propaganda, presenting before the public generally and labour men particularly the economic necessity of increased efficiency in the matter of production, and the advantages accruing therefrom to the whole community. That this conference approves the action of the Standing Committee on Labour in entering into arrangements with the labour men for the formation of a National Joint Conference Board, and approves the Constitution of the National Joint Conference Board, as formed; and that the conference further, directly or through its Executive Committee, appoint five representatives and three alternate representatives for the ensuing year, as

required by the Constitution of the National Joint Conference Board. (This Constitution was printed in the LABOUR GAZETTE, December, 1920, pp. 1604-5.) That this conference approves the formation of Local Joint Industrial or Conference Boards, along lines similar to the National Joint Conference Board, as soon as the National Joint Conference Board shall have standardized to some extent the Constitution of the Local Boards. That this conference approves of the proposed Apprenticeship Plan as adopted by the National Joint Conference Board, (described in a preceding article in this issue) and instructs its members on the National Joint Conference Board to make every effort to get the system in operation as rapidly as possible, and instructs its Executive Committee to furnish to the National Joint Conference Board sufficient funds for the carrying on of this work. That the members of a Standing Committee on Labour be appointed at this conference to follow up labour matters until next conference, and that from this committee our memberships on the National Joint Conference Board should be selected. Further, that this com-

mittee should be divided into two sections, East and West, with a Sectional Chairman or Secretary, who would arrange to keep in touch with our other members, so that members from one end of the country might have the advice and counsel of the members from the other parts of the country, with a view to distributing the burden of the work."

At the recent meeting of the National Joint Conference of the Building and Construction Industry a resolution was passed to request the Federal Government to float a housing loan of two hundred and fifty million dollars. This resolution was rejected by the Conference and the following resolution was adopted in its place: "That this association make direct representations to the Federal Government, asking them to make money available for housing loans: (a) That the Federal Government form a National Housing Board, which shall act as the agent of the Government in investigating and recommending appropriations of money, and making it available through well-established loan companies in the various centres, for loaning to individuals for building houses, making use of the existing machinery of these companies for receiving applications and reporting on the loan, loaning money on mortgages and collecting payments; (b) that provision be made for an owner to make use of his own labour in constructing his house, and that the owners be encouraged to build on their own individual lots; and (c) that the maximum value of the house on which a loan may be granted be \$8,000, and that loans be made available on duplex and three-flat houses."

The following resolutions were also adopted: "That this conference endorse the views of the Provincial Association of Saskatchewan, striving to place the Workmen's Compensation legislation of that province on a better basis; that an effort should be made to have uniformity of such legislation throughout Canada."

"That we bring to the attention of the Federal Government the fact that while

money has been voted to provide for the holding of a National Industrial Conference; same has not been called, and therefore, we request the Minister of Labour to call an Industrial Conference of the Construction Industry in Canada, at the earliest possible moment."

"That whereas contracts had been let by the Federal Government during the war on the cost-plus basis, and whereas, since the armistice, assuming conditions had again become stable, contracts had been let on the fixed lump-sum basis, and whereas the conditions which have prevailed since the armistice, due to increased freight rates, material costs and labour costs, which were entirely beyond the control of any contractor, have resulted in serious losses: be it resolved that the Federal Government be urged to reimburse such contractors up to the amount of their total net cost, providing such cost has not been due to the negligence or other serious fault on the part of the contractor, and also provided that such net cost be duly established and certified by a chartered accountant. That whereas large public works in the Dominion of Canada, which were included in the estimates, have been delayed and held back, we ask all our members and local organizations to interview their members by deputations, and impress on them the necessity for an immediate start of all such work. That a committee, composed of Messrs. Carswell, Lindsay and McLeod, be appointed, for the purpose of securing such data as may be of assistance to such deputations. That Mr. Anglin arrange a conference between the Premier and influential members of this association to discuss such delayed projects. That this association believes that construction costs will be as low during the next two building seasons as will be experienced for some time to come, and that we cannot expect a further reduction in these costs until there is a very marked increase in production."

The following officers were elected for the ensuing year: President, J. P. Ang-

lin, Montreal; 1st vice-president, J. B. Carswell, Toronto; 2nd vice-president, Jas. Mackie, Winnipeg; honorary secretary, George H. Whitlock, Moose Jaw; honorary treasurer, Joseph M. Pigott,

Hamilton. The executive secretary is J. Clark Reilly, 1391½ Sparks St., Ottawa.

The next annual conference will be held at Hamilton.

ANNUAL CONVENTION OF THE NEW BRUNSWICK FEDERATION OF LABOUR

THE eighth annual convention of the New Brunswick Federation of Labour was held at St. John, N.B., on January 11-13, about 80 delegates attending, this being the largest meeting in the history of the Federation. It was decided that henceforth the legislative programme adopted each year be submitted to the Trades and Labour Congress of Canada. Among the measures approved by the Federation were the following:

The creation of a provincial department of labour, with a minister of labour, who shall be a member of the executive council of the government.

The Workmen's Compensation Act to be amended to provide for a weekly compensation of \$9, or full pay in case of an employee receiving less than that amount, with a maximum of 55 per cent of \$166.66 per month; further, to increase the monthly allowance to children from \$7.50 to \$10, or \$15 to motherless children; where a workman leaves no widow, or the widow dies, and the home is kept up by a relative acting as foster-mother, the latter to receive the same monthly payments on behalf of the children and herself, as though she were the widow of the deceased.

The Factories Act to be amended to provide for its application to all industries; the minimum employment age for children to be sixteen years; the hours of labour to be not more than 8 per day or 48 per week; women, boys and girls not to be employed before 6 a.m. or later than 10 p.m., or more than 10 hours in any one day including overtime; overtime to be limited to 36 days in any twelve months, and the existing proviso regarding the non-ap-

plication of the present regulation to be repealed; that provision be made for the grading of certificates for stationary engineers.

A Minimum Wage Board to be appointed, to make inquiry as to wages, hours of labour, and working conditions for female workers, and to make orders with respect to same, which orders shall be binding.

A Mothers' Pension Board to be appointed to administer a fund to be used for providing support for mothers of dependent children or widows.

The Mining Act to be amended to provide for mine regulation and inspection in conformity with the recommendations of the Dominion-Provincial Commission on the Uniformity of Labour Laws. That the provincial government be requested to require the provision of two ways for entering and leaving coal mines, that all mine operators install fans for ventilating the mines; that "pass-bys" be provided at the bottom of shafts to enable miners to cross the shaft without passing underneath cages; and that covers be placed on cages.

That legislation be passed to give immediate effect to the draft conventions and recommendations of the Washington Conference of the League of Nations International Labour Organization.

That old age pensions be provided for all workers in need thereof.

That all persons driving motor vehicles in the province must pass examinations and obtain certificates of competence.

Among other resolutions approved were the following:

The Election Act to be amended to provide for proportional representation in provincial and municipal elections; That direct legislation be provided for through the initiative and referendum; That equal rights be granted to women in school district and municipal voting and office holding; That property qualifications for voting and holding office in municipalities be abolished.

That all lands held idle for speculation be assessed at a higher valuation than land with improvements thereon.

That school districts be enlarged and consolidated where possible; teachers who cannot serve full 35 years to be allowed as many thirty-fifths of yearly pension as they have served years in the profession, and that teachers' pension maximum be increased from \$400 to \$800.

That the New Brunswick Electric Power Act be amended to make it unlawful for the New Brunswick Electric

Power Commission, or for any municipality supplied by the Commission, to sell power to any private persons or corporation for distribution for profit.

That immigration from Europe be restricted on account of the present unemployment situation.

That night and Sunday work be abolished in bakeries as far as practicable, and that 8 hours constitute a day's work.

Motions favouring government ownership and control of the liquor traffic and a referendum on importation of liquor into the province were negatived.

Officers for the ensuing year were elected as follows: President, J. E. Tighe (St. John); 1st vice-president, E. C. Barry (Fredericton); 2nd vice-president, J. P. Manderson (Newcastle); 3rd vice-president, P. M. Landry (Moncton); secretary-treasurer, George R. Melvin (St. John).

The next annual convention will be held at Moncton, the date to be announced later.

ANNUAL CONVENTION OF THE ALBERTA FEDERATION OF LABOUR

THE Eighth Annual Convention of the Alberta Federation of Labour was held at Edmonton on January 10-12, with about seventy delegates present. In the report of President Frank Wheatley and Secretary-Treasurer Walter Smitten an account was given of the requests for legislation submitted to the Alberta Government on January 26, 1920, and of the action taken by the Legislature with regard to them. They reported that the scope of the Workmen's Compensation Act had been broadened to include industries that had not been brought under it. The amount of indemnity for fatal accidents was increased 50 per cent. The Coal Mines Act was amended to provide for the payment of wages on special days. The Factories Act was amended to provide for the appointment of a minimum wage commission, with power to

fix minimum wages of female employees.

Reference was made to the difficulty experienced by organizations among the miscellaneous occupations to secure agreements with employers, and a draft law was submitted for the consideration of the Convention with a view to coping with this situation and settling industrial disputes. The proposed law was similar to the Industrial Conditions Act of Manitoba (described in the LABOUR GAZETTE, April 1919, page 492 and May, 1920, page 622).

According to the report satisfactory progress was made by the Federation during the year, thirteen new organizations having joined. The membership was placed at nearly 13,000.

The following subjects among others were dealt with in resolutions passed by the Convention; in favour of a more democratic system for the selection of juries; in

favour of bringing mine rescue teams under the Workmen's Compensation Act, and in favour of paying wages of \$10 a day to members of these teams when training; in favour of the adoption of additional safety regulations by the Workmen's Compensation Board; in favour of legislation limiting the hours of labour to eight per day and 44 per week; in favour of the prohibition of immigration until the labour market becomes stable; in favour of the organization of a Canadian Bureau of Research by the Trades and Labour Congress of Canada; in favour of weekly payment of wages of all employees; requesting the Provincial Government to

call a conference to consider the unemployment situation; requesting the Provincial Government to adopt, in so far as practicable, the proportional representation method of voting in the election of members to the Provincial Legislature, and to amend the charters of cities, where the change has not been made, to provide that municipal elections be carried on under proportional representation.

The election of officers resulted in the re-election of Frank Wheatley as President and Walter Smitten, Calgary as Secretary-Treasurer.

Lethbridge was chosen as the place for the next convention.

EMPLOYMENT IN CANADA FOR THE YEAR 1920

A Review based upon Returns received from the Offices of the Employment Service, Employers of Labour, Trade Unions, and Municipalities

THE various indices of employment maintained by the Employment Service agree in showing that 1920 was a year of early rise and rapid fall in the labour market. The year 1919 was weighted with the demobilization problem and it was midsummer before industry seemed to get under way. As if to compensate for this tardiness the demand for labour continued into the late autumn and at the end of the year there was no unusual surplus. The year 1920 appeared to give promise of twelve months of activity. The winter dullness passed off quickly. The number of ex-service men registered for the Federal Emergency Appropriation was much smaller than had been expected. The percentage of trade union members unemployed averaged only 3.5 for the first four months of the year as compared with 5 per cent in the first four months of 1919. Demand for labour at the employment offices began to exceed the supply about the first of April, two months earlier than in the previous year. Reports from employers indicated an

expansion in the volume of employment beginning early in April and reaching a peak in July, while building permits in 35 cities registered the largest monthly total of the year in April—\$15,333,183 as compared with a record of \$11,995,683 for 1919, which was not recorded until September.

At the end of July the curve of unemployment in trade unions registered a higher percentage than in the previous year, and in each month following it has exceeded the 1919 mark. A surplus of labour began to appear in the autumn and applications for work at employment offices rose to a position above vacancies offered by employers in the second week of October, a month earlier than in 1919. The employers' weekly report shows that, despite buoyancy in the Prairie Provinces, the volume of employment for the whole country has been shrinking steadily since the last week of September, and in that month the value of building permits was below the figure for 1920 and has so remained. The number of unplaced applicants on

the registers of the Employment offices is steadily increasing, while the number of unfilled vacancies has been declining at an equal rate.

It is now evident that 1919 was only the first phase of the re-adjustment from war to peace. Since last summer there

has been much business unsettlement and many industries have been reducing staffs. To this unemployment seasonal inactivity is now adding still further and the total volume of unemployment bids fair to surpass that of the winter of 1915-16.

Employment as shown by Employment Office Reports

The reports of applications, vacancies and placements received from the local offices of the Employment Service afford a valuable index to labour market conditions, and the accompanying chart presents in graphic form a history of the movement of labour through the offices during the year. It shows that from April 1, until the end of July in 1919, the spread between the supply of labour as indicated by applications for employment and the demand for labour as evidenced by employers' orders was never very great. Industry had not completed the change from war to peace production, and demobilization threw thousands of men on the labour market, delaying the usual spring absorption. Not until the heavy demand for labour

for the western harvest in August did demand rise above supply pronouncedly. During the autumn the demand kept up very well and a surplus of labour was not registered until the second week in November, synchronizing with the release of numbers of men from railroad and construction operations and farm work.

All through the winter until the end of March, 1920, the Employment offices carried a surplus of applicants on the registers, a peak being reached early in January when the registration of unemployed ex-service men for the federal emergency appropriation was heaviest. But in the spring, recovery from winter slackness was much earlier than in 1919, the curve of demand rising above the

curve of supply about the first of April as compared with the end of June in the previous year. The demand for labour in the western harvest also was somewhat heavier than in 1919, and in the record week of the harvest season, which was the record week of the year as well, 17,500 placements were effected as against 13,500 in the corresponding week of 1919.

The winter of 1920 began with a lesser volume of employment than at the beginning of last winter. In 1919 the demand, as represented by vacancies, did not make a final crossing to a position

below supply as indicated by applications until the second week in November, while in 1920 the crossing took place in the second week of October, just one month earlier. During the last two months of the year placements diminished steadily, in the first week of December reaching a point noticeably lower than in the same week of 1919, with vacancies in close correlation. For the last week of the year, vacancies numbered 3,169 as compared with 3,866 for the same week of 1919, while placements in regular work totalled 2,942 as compared with 3,103 reported for the corresponding week of the year before.

Employment as reported by Employers

Reports of the number of persons on payrolls, received weekly from some 5,000 employers employing about 700,000 workpeople, constitute a very good barometer for the employment situation in industry. These reports are assembled by industrial groups, and the week of January 17 is used as a base in constructing the accompanying chart, which shows the changes weekly in the number of persons employed. It has been found impracticable to use the first week of the year as a base because of the annual holiday and inventory period which occurs at that time. In plotting the curve the percentage change rather than the actual number of employers is used, for the reason that the number of returns received weekly is not constant.

Taking the report for all Canada, the curve for the first few weeks shows the recovery from the holiday season, but from the middle of January until the first of April it remained almost horizontal. During this period railway and

other construction work, which bulks so large in the industry of the West, was at its low level for the year, a fact which exerted a strong downward influence on the curve of employment for Canada as a whole. With the advent of the usual spring expansion in out-of-door work, the volume of employment grew rapidly until a peak was reached in the middle of July, when the number of employees on the payrolls was nine per cent greater than at the middle of January. The various curves show that this expansion was common to all parts of Canada, but very marked in the Prairie Provinces and British Columbia, where many thousands were drafted into railway and other construction. The curve for the Maritime Provinces, partly due to an unusual volume of construction work, was steepest of all.

The curve for the provinces of Ontario and Quebec closely parallels the curve for the whole country, due to the large proportion of the total industrial population within these two provinces. The

recession from the peak in July was accounted for mainly by the numerous separations from industry and from construction on the part of workers going to the harvest fields, a movement which appears in the curve for the Prairie Provinces and also in the curve for Ontario and Quebec. With the conclusion of the harvest the workers returned to industrial employment in large numbers, especially in the West, where the fine open fall favoured railway and other construction. At the middle of November the industrial workers in the Prairie Provinces were very well employed, but the employment curve for the country as a whole had dropped to the position occupied on May 1. The curve for the Maritime Provinces was keeping up well, but the curve for Ontario and Quebec was falling rapidly because of the slump in vari-

ous manufacturing industries, chiefly clothing, boots and shoes, rubber, some branches of textiles, furniture, pianos, automobiles, confectionery and sugar refining. The rapid fall in the curve for British Columbia reflects shrinkage in railway construction, lumbering and logging operations and ship-building. Since the middle of November the decline has been markedly accelerated, least so in the Maritime and Prairie Provinces, and most noticeably in the curves for Ontario and Quebec and for British Columbia, which were closely followed by that for all Canada.

The following table shows the trend of employment throughout the year for the principal industrial groups. The figures are those for the week nearest the middle of the month, the number of employees on the payrolls for the middle week of January being taken as 100.

PERCENTAGES OF EMPLOYMENT AT MIDDLE OF EACH MONTH DURING 1920 BY INDUSTRIES

	Jan., 17	Mar. 13	April, 17	May, 15	June, 19	July 17	Aug. 14	Sept. 18	Oct. 16	Nov. 13	Dec. 18	Jan. 1

Employment as Reported by Trade Unions

Reports from trade unions as to the number of their members unemployed are indicative of the trend of the labour market for skilled workers in particular. During the year returns have been received for the last day of each month from some 1,500 unions with a membership of over 200,000. As shown by the accompanying chart, unemployment among trade unionists fell to an almost irreducible minimum during the war—less than 1 per cent in the summer of 1918. After the armistice the cessation of war industries, added to the unusual winter dullness, brought the trade union unemployment curve in February and March, 1919, to 5.6 per cent—the highest percentage of unemployment reported since the winter of 1915-16. The usual spring expansion was somewhat retarded, but in the summer months unemployment among members amounted only to

slightly more than 2 per cent. The curve mounted rapidly from the first of October to the first of December, when an unemployment percentage of 5 was registered, but it dropped to 4 per cent in January and February of 1920.

Not only was the unemployment curve lower in the winter of 1920 than in the previous winter, but improvement began earlier, and in the months of March, April and May there was reported an unemployment percentage of about 3, as compared with considerably over 4 in the spring of 1919. While there was more rapid recovery from winter slackness than in 1919, trade unionists were not as well employed in the summer as in the previous year, and at the end of August the curve registered an unemployment percentage of 4. There was some improvement in September, but by the end of October the curve had risen

steeply to 5.7 per cent. The unemployment chiefly responsible for this steepness was registered among trade unionists in the clothing, boot and shoe and rubber industries of Ontario and Quebec, and shipbuilding and lumbering in British Columbia. Slackness among carpenters and joiners also contributed. By the end of December the percentage of unemployment had reached 13.42 as compared with 4.98 in 1919, 2.76 in 1918 and 8.97 in 1915. The most serious

unemployment at the end of December was among workers in the Clothing, Metals, Food, Leather, Glass, Jewelry and Woodworking industries. The percentages in the Navigation and Building groups, while large, were of course seasonal.

The tables on pages 219-220 show the percentages of unemployment in trade unions by provinces and by groups of industries.

Employment for Civic Employees

The accompanying tables and chart show the volume of employment, in both contract and municipal work, for workers temporarily employed by 15 city corporations during the year 1920 as compared with the previous year. In comparison with 1919 there was an increase of 1,735 persons or 18.3 per cent in the number of employees and \$3,841,032 or 45.8 per cent in the wages paid. These

15 cities employed during the year an average of 11,179 persons, and the payrolls amounted to \$12,220,010.86 as compared with an average of 9,444 persons and an aggregate payroll of \$8,378,978.35 during 1919.

The city of Montreal reported the largest number of persons employed in this way. With the exception of St. John, Saskatoon and Calgary, increases

in comparison with 1919 were recorded by all the cities for which figures are available, the most substantial increases being reported by Montreal, Toronto, and Winnipeg. These increases are interesting in view of their relation to the unemployment situation in December; it will be seen that by far the largest increase in any one month was that of December, the aggregate number of employees being 11,282 as against 7,838 in 1919. While all months of the year showed increases over the corresponding months of 1919, it may be noted that March took second place to December in amount. April showed the largest aggregate number of employees, with

March in second place. In May there was a noticeable drop; from May till August there was a slight gain; from August till December there was a steady decline. The striking feature of the year as contrasted with 1919 was the fact that this decline, instead of accelerating toward the end of the year, was checked at the end of November and registered a pronounced recovery, reflecting the effort put forth by municipal authorities to alleviate the unemployment then prevalent in the industries generally. This recovery is the more remarkable in that a mild winter, with little snow, gave less casual employment to street cleaners than ordinarily.

Employment as Indicated by Building Permits

Building permits issued in 35 cities having a minimum population of 15,000 show the estimated cost of their building work during 1920 to be \$100,679,839 as compared with \$77,113,413 in 1919, an increase of \$23,566,426 or 30.5 per cent. As was the case in 1919, these figures must be interpreted in the light of increased cost of building materials and wages, although the last two months of the year showed some reductions along these lines. Conditions are still sufficiently abnormal to make comparison with pre-war years difficult.

The accompanying chart shows the

value of building permits by months since January, 1910. It will be seen that the extraordinary activity shown during the building boom before the war, reaching its peak in 1912, slackened abruptly in 1915 through the curtailment of all but essentially necessary building during the war. The revival in 1919 was marked, although large increases were not shown until the middle of the year. During 1920 there was further increase, commencing, as in normal years, about February and in March reaching a peak considerably higher than that reached in 1910, though still much lower than in the 1911-1914 period.

Compared with 1919, all but the Maritime Provinces registered increases, the largest single instance being that of Ontario, which on a total of \$47,175,077 showed an increase over 1919 of \$6,590,243. The province of Quebec came a close second, and Manitoba registered the largest proportionate increase while ranking third in actual amount of increase.

Toronto showed the largest single total among cities, registering \$25,737,063, with Montreal in second place with a total \$14,067,609. Winnipeg showed

an extraordinary increase, totalling \$8,370,150 as against \$2,948,000 in 1919; in fact the western cities in general showed a marked advance over totals for the previous year. Halifax, Sherbrooke, Hamilton, Ottawa, Calgary, Edmonton and Vancouver, reported permits totalling in each case three millions or more. Decreases as against 1919 were reported by Halifax, Moncton, Three Rivers, Brantford, Guelph, Hamilton, Kingston, London, Port Arthur, St. Catharines, St. Thomas, and Saskatoon.

The following table presents the situation since 1910 in detail.

ESTIMATED COST OF BUILDING WORK IN THE YEARS 1910-1920, AS INDICATED BY BUILDING PERMITS ISSUED IN THIRTY-FIVE CITIES.

City	1910	1911	1912	1913	1914	1915	1916	1917	1918	1919	1920	1920 compared with 1919

UNEMPLOYMENT IN TRADE UNIONS AT THE CLOSE OF DECEMBER, 1920, AS REPORTED BY UNIONS MAKING RETURNS

THE present article on unemployment among the members of local trade unions deals with unemployment as at the end of December, 1920, and is based on returns received from 1,573 labour organizations with a total membership of 208,320 members. For all occupations reporting, 13.4 per cent of the members were unemployed as compared with 10.0 per cent at the end of November, 1920, and with percentages of 4.98; 2.76; 2.42; 2.17 and 8.7 at the end of December, 1919, 1918, 1917, 1916 and 1915 respectively. Unemployment, as used here, has reference to involuntary idleness due to economic causes. Persons occupied in work other than their own trades, or who are idle because of sickness, or as a direct result of strikes or lockouts, are not considered as unemployed. As the number of unions making returns varies from month to month with consequent variation in membership upon which the percentage of unemployment is based, it should be understood that the percentage of unemployment figures have reference only to those unions reporting.

That the percentage out of work at the end of December was larger than in the preceding month and also than in the corresponding month of previous years was due to there having been less employment in practically all the groups of industries, particularly in the manufacturing and mechanical divisions and in building construction.

Table I on this page summarizes the returns by provinces. There were increases in unemployment, both as compared with November, 1920, and with December of preceding years, in every province except British Columbia. In that district, however, improvement was shown in comparison with the preceding month and with December, 1919 and 1915, but there was less activity than in December, 1916, 1917, and 1918.

The percentages reported unemployed in the different groups of industries are indicated on table II on page 220.

Unemployment in the manufacturing and mechanical industries, as indicated by 378 unions with a combined membership of 49,655 persons, was considerably more pronounced than in any of the months used in this article for comparative purposes, 21.4 per cent of the members being out of work as compared with 15.6 per cent in November and with percentages of 2.8 in December, 1919, 2.9 in December, 1918, 2.8 in December 1917, 2.3 in December, 1916, and 3.1 in December, 1915. A large share of the increase in unemployment as compared with the preceding month may be attributed to shut downs for the

holidays and for inventory purposes, but it is noteworthy that the release of staffs for these reasons was much more marked than in December of previous years. Within this group of industries, the most decided increases in idleness were reported in the metals, machinery and conveyances and clothing divisions. There were also increases in the number unemployed among workers in food, tobacco and liquor, textiles, carpets and cordage, pulp, paper and fibre, printing, publishing and paper goods, wood-working and furniture, leather, boots, shoes and rubber, glass bottle blowing and jewelry.

In addition to those entirely unemployed, a large amount of short-time was reported by unions of blacksmiths, boilermakers, metal polishers, pattern makers, machinists, iron, steel and tin workers, meat cutters and butcher workmen, bakers and confectioners, tobacco, brewery and textile workers, tailors, garment and fur workers, pulp and paper makers, typographers, pressmen, bookbinders, lithographers, stereotypers, electrotypers, leather, boot and shoe, wood and jewelry workers.

Reports from 652 organizations of transportation workers, with an aggregate membership of 89,376 persons, indicate that 7.6 per cent of the members were out of work as compared with the percentages of 2.6, 5.0, 1.5, .70, 1.5 and 3.0 in November, 1920, and December, 1919, 1918, 1917, 1916, and 1915, respectively. This increase in unemployment as compared with the preceding month occurred largely among navigation workers, but there was also less activity for steam railway employees, particularly for carmen who were noticeably affected by shut-downs for the holidays. The returns from railroad workers constitute about 75 per cent of the entire group membership reporting, and their percentage of unemployment was 4.4 as compared with 2.9 in November and 1.6, 0.4, .8, .6, and 2.4 respectively in December of the five preceding years. The increase in unemployment in the navigation group was reported mainly among long-

shoremens in New Brunswick, but there was, in addition, considerable seasonal inactivity for unions of sailors, cooks and firemen in Quebec and Ontario. It has been noted previously in these articles that employment for navigation workers fluctuates suddenly and violently, depending upon the number of ships in harbour from time to time. Street and electric railway employees registered a nominal increase in the percentage of unemployment in comparison with the months used in this article for comparative purposes, with the exception of December, 1915, when the percentage out of work was slightly larger. Teamsters and chauffeurs also showed less activity than in previous reports. A large number of organizations of conductors, firemen and engineers, carmen, trainmen, maintenance of way employees, unclassified railroad workers, longshoremens, street and electric railway employees and teamsters and chauffeurs recorded a substantial amount of short time.

In the mining, quarrying and refining of ores group, returns were tabulated from 36 unions with a total membership of 10,984 persons, indicating that 1.3 per cent of the members were out of work as compared with unemployment figures of .6 per cent in November, 1920, and with 2.1 per cent in December, 1919, 1.2 in December, 1918, 2.1 per cent in December, 1917, .7 per cent in December, 1916, and 5.9 per cent in December, 1915. An increase in the number out of work as compared with the preceding month was reported by mine workers and was partly a result of the unusually mild weather prevailing at the time. Quarry workers and mill and smelter men, as registered by two unions of the former and one of the latter, continued to be fully employed. Some short time occurred among miners in Nova Scotia and Alberta.

The percentage out of work in the building and construction group, as indicated by 286 unions having a combined membership of 32,575 persons, was 26.5 as compared with 12.4 in the pre-

TABLE III.—UNEMPLOYMENT ON DECEMBER 31, 1920

ceding month, with percentages of 12.1, 8.7, 9.6, 5.2, and 28.3 in December of 1919, 1918, 1917, 1916, and 1915, respectively. Part of the increase in unemployment as compared with November was due to seasonal causes, while the general depression also had its effect upon the amount of work available. It may be noted, however, that there was slightly more activity in this group than in December, 1915. Bricklayers, masons, plasterers, tile layers, lathers, roofers, steam shovel and dredgemen recorded less employment than in any month since December, 1915. Among carpenters, joiners, electrical workers, painters, decorators, paper hangers, plumbers, steamfitters, hod carriers and building labourers, the percentages out of work were larger than in any month used in this article for comparison; while those registered by granite and stone cutters and bridge and structural iron workers were exceeded only by the percentages in December, 1917 and 1915, in the case of the former, and December, 1919 and 1915, in the case of the latter. There was, moreover, a large amount of short time reported among unions of bricklayers, masons, plasterers, carpenters, joiners, electrical workers, granite and stone cutters, painters, decorators, paper hangers, plumbers, steamfitters, lathers and roofers.

In the public employment group, as indicated by returns received from 78 organizations with a total membership of 7,119 persons, there was slightly more activity than in November, but the percentage out of work was larger than in December of previous years, 1.3 per cent of the members being idle as compared with 3.1 per cent in the preceding month and with percentages of less than 1 in previous Decembers. The improvement in the first comparison was due to there being increased employment for municipal workers.

The percentage out of work among lumber and logging workers, as reported by 4 unions with a combined member-

ship of 3,944 persons, was 12.7 as compared with 42.6 in November. While there was some improvement shown for these workers it should perhaps be noted that they are in some cases transient workers and therefore do not long remain in a locality in which work is scarce. Figures for comparison with December of previous years in this group are not available. Fishermen registered an increase in unemployment as compared with November, but the percentage out of work was substantially smaller than in December, 1919.

Unemployment in the group of miscellaneous trades, as reflected by 135 organizations with an aggregate membership of 12,820 persons, was more pronounced than in any month used in this article for comparison, with the exception of December, 1915, 7.8 per cent of the members being idle as compared with 3.1 per cent in November and with percentages of 4.2, 2.3, 1.6, 1.4, and 8.4 in December, 1919, 1918, 1917, 1916, and 1915, respectively. Retail clerks, as indicated by 4 unions reported a slight amount of unemployment. Hotel and restaurant employees were somewhat more fully employed than in November, 1920, and December, 1919, but the percentage out of work was larger than those in Decembers of the preceding years. Musicians and theatre employees and stationary engineers and firemen registered slightly more idleness than in November. In the former, however, the percentage was smaller than in December, 1919, and 1915, and in the latter it was less pronounced than in December, 1919, 1918, and 1915. Barbers and unclassified workers recorded less activity than in any month used in this article for comparative purposes. In addition to the members entirely out of work some short time occurred among unions of barbers, musicians and theatre employees and stationary engineers and firemen.

The tabular statement on pages 222-223 presents the return in some detail.

EMPLOYMENT CONDITIONS IN CANADA FROM DECEMBER 25, 1920,
TO JANUARY 22, 1921, AS REPORTED BY EMPLOYERS

WEEKLY reports from employers to the Dominion Headquarters of the Employment Service of Canada, Department of Labour, during the five weeks from December 25, 1920, to January 22, 1921, inclusive, show a net decline in the volume of employment afforded by these employers, the increases registered during the last two weeks being more than off-set by the decreases during the first three. The change reported for each week as compared with the preceding week is as follows:

Week ending December 25, a decrease of 17,484 persons or 2.8 per cent.

Week ending January 1, a decrease of 45,214 persons or 7.4 per cent.

Week ending January 8, a decrease of 2,769 persons or .5 per cent.

Week ending January 15, an increase of 12,309 persons or 2.1 per cent.

Week ending January 22, an increase of 2,226 persons or .4 per cent.

During the five weeks under review, employment conditions in the different parts of Canada were substantially the same, decreases being reported everywhere during the period as a whole. In the Maritime Provinces firms reported increases to their staffs during the week of January 8, only. Within this district, employment was better maintained in New Brunswick than in the other provinces, there being increased activity during the weeks of January 8 and 15, while in Nova Scotia there was a gain only during the former week. In Quebec there were substantial declines

during the first three weeks of the period under review, with similar increases during the last two. Firms in Ontario registered pronounced decrease in employment during the weeks of December 25 and January 1, with some recovery during the remaining weeks. In these two provinces there was a net decrease of 35,383 persons, of whom 22,498 were in Ontario. These substantial declines were in part due to shutdowns for holiday and inventory purposes, recovery from which losses was not complete by January 22. In the Prairie Provinces firms registered contractions in payrolls during the weeks of December 25, January 1 and 22, while the increases reported in the intervening weeks were not particularly large. Within this district, Manitoba showed declines in employment during the first two weeks of the period, Saskatchewan during the first three and the last week, while in Alberta there were continuous losses. The same conditions as in the Prairie Provinces prevailed in British Columbia, there being increases only during the weeks ending January 8 and 15.

A summary of the returns by industrial groups shows that in Local Transportation, only, was there a net increase in employment and within this group there were decreases during three weeks of the period. In Logging, Railway Construction, Edible Animal Products, Lumber and its Products, Edible Plant Products, Fur Goods, Iron and Steel, Leather Goods, Mineral Products, n.e.s. Non-ferrous Metal Products, Pulp and Paper, Rubber Goods, Textiles, Miscel-

laneous Manufacturing Industries, Mining of Metallic Ores, Quarrying, Hotels and Restaurants, Telephone Operation, Retail Trade and Water Transportation there were net decreases with increases in one or more of the weeks under review. Firms in Building Construction, Clay, Glass and Stone Products, Coal Mining, Telegraph Operation, Wholesale Trade and Railway Transportation, however, registered declines during all five weeks.

The decreases in employment in Iron and Steel Products as during the preceding period reviewed in the *LABOUR GAZETTE*, were the most noteworthy, aggregating 8,596 persons. These losses which occurred largely in the Crude, Rolled and Forged, Railway Car and other land Vehicles, Steel Ship Building, Stove and Iron Pipe branches, were largely attributable to shutdowns for holiday and inventory purposes. The reductions in Building and Railway Construction, Lumber and its Products, Clay, Glass and Stone Products, Pulp and Paper, Textiles, Miscellaneous Manufacturing Industries, Retail Trade and Railway Transportation were also pronounced, ranging from 2,000 to 6,400 employees. In the first three, the declines were largely due to seasonal causes. The shrinkages in Pulp and Paper, also partly seasonal in character, were increased by shutdowns for repairs, especially in the paper mills in Quebec and, in addition, there was some inactivity in printing establishments. Within the Clay, Glass and Stone Products group there was marked slackness in Glass making plants. In the Textile group the largest losses occurred in Hosiery and Knit Goods, Garment and Thread, Yarn and Cloth factories, while in Miscellaneous

Manufacturing Industries most of the contractions were reported in the Tobacco division. The declines in Retail Trade were almost entirely the result of after-Christmas dullness, and those in Railway Transportation reflected the general depression.

In Edible Animal Products the reductions, which were partly seasonal, were reported largely in the Western Provinces, but also in Ontario and Quebec. Inactivity occurred in the Footwear and Tire Manufacturing branches of Rubber, consequent in part upon inventory shutdowns. The declines in Coal Mining were to some extent attributable to the extreme mildness of the winter. In Non-ferrous Metal Products the greater part of the contractions were registered by firms in the Nickel sub-group and were partly a reflection of the shortage of power and water. The same factor also had an effect upon Metallic Ore Mining, particularly in Ontario. The losses in Wholesale Trade indicated the slackness following the holiday season together with that caused by the general depression. It has been mentioned previously in these reports that employment in Water Transportation fluctuates rapidly, depending largely upon the number of ships in harbour from week to week.

The accompanying chart shows the weekly percentage of change in the number of persons on payrolls since the base week (January 17, 1920) as reported by those employers making returns, the number averaging over 4,900 firms a week. The returns for the week of January 17, 1920, are being taken as base figures. It had been the intention to take the week of January 1, 1920, but this was found impracticable because of the abnormal situation at that time, due

to the annual inventory and holiday period, and the consequent reductions in staffs. The week of January 17 coincides fairly closely with the termination of this season and accordingly reflects more normal conditions. The downward tendency which the curve had evidenced

since September showed a more pronounced decline during the period under review, the percentage dropping to 12.4 below the base on January 1. There was some recovery during the next two weeks but the percentage again declined to 11.4 below the base on January 22.

EMPLOYMENT IN THE BUILDING TRADES DURING DECEMBER, 1920, AS INDICATED BY BUILDING PERMITS

EMPLOYMENT in the building trades, as indicated by the value of building permits issued in 56 cities, showed a further decrease during December as compared with the preceding

month, the total value of building permits falling from \$5,287,321 in November to \$4,654,479 in December, a decline of \$633,842 or practically 12 per cent. New Brunswick, Alberta

and British Columbia registered increases in this comparison, that of \$359,550 in the last named being the most decided. Of the decreases in the remaining provinces, that of \$777,722 in Ontario was the largest.

As compared with the figures for the corresponding month in 1919 there was a decrease of \$489,699 or 9.5 per cent, the value for December, 1919, having been \$5,144,178. In this comparison there were increases in New Brunswick, Quebec, Alberta and British Columbia, with decreases in the remaining provinces.

Of the larger cities, Montreal and Vancouver reported increases in the value of the permits issued as compared with both November, 1920, and December, 1919. In Toronto, Winnipeg and Edmonton, however, there were declines in both cases.

Of the smaller centres, St. John, Westmount, Hamilton, Peterborough, Woodstock, Calgary and Victoria registered increases as compared with the previous month and also in comparison with the corresponding month in 1919.

The returns from 35 cities formerly used in this report (which are distinguished by asterisks and which are also tabulated separately for statistical purposes) show that the total value of building permits issued by these cities amounted to \$4,401,908 as compared with \$4,689,201, in November, 1920, and with \$4,717,139 in December, 1919. There was, therefore, a decrease of \$287,293, or six per cent as compared with the returns for the preceding month, and of \$315,231, or almost 7 per cent, as compared with figures for the corresponding month of last year.

EMPLOYMENT FOR CIVIC EMPLOYEES IN FIFTEEN CITIES, DECEMBER, 1920

REPORTS from fifteen cities showing the number of employees temporarily employed and the wages paid these persons during the month of December, showed an increase of nearly 9 per cent in the number of employees and of 1 per cent in the amount of wages paid, as compared with the preceding month. In December, 1920, 11,282 persons were temporarily employed, and the wages amounted to \$943,058.26, as compared with 10,366 employees and an aggregate payroll of \$933,125.93, in November.

In comparison with the returns for the same period in 1919 there were increases of practically 44 per cent in the number of employees and of nearly 61 per cent in the wages paid, there having been 7,838 employees with a total pay-

roll of \$586,788.99 in December, 1919. These gains were largely the result of special work undertaken by the cities on account of the unemployment situation in December.

Montreal, Hamilton, Brandon and Vancouver registered increases in the number of persons temporarily employed on municipal work both as compared with the returns for November, 1920, and December, 1919. Edmonton showed a gain in the former comparison, with a decline in the latter. On the contrary, in Ottawa, Toronto, London, Winnipeg, Saskatoon and Victoria there were decreases as compared with the preceding month but increases in comparison with the corresponding month of 1919. St.

EMPLOYMENT (BOTH CONTRACT AND MUNICIPAL WORK) AFFORDED WORKPEOPLE TEMPORARILY EMPLOYED

John, Regina, Moose Jaw and Calgary showed reductions in both comparisons.

As to wages Montreal, Hamilton, Moose Jaw and Vancouver recorded increases both as compared with the figures for November, 1920, and December, 1919. At St. John, Ottawa, Toronto,

London, Winnipeg, Brandon, Regina, Saskatoon and Victoria there were declines in comparison with the preceding month and increases over the corresponding month in 1919. Calgary and Edmonton registered decreases in both cases.

FAIR WAGE CONTRACTS, JANUARY, 1921

DURING January the Department of Labour received for insertion in the LABOUR GAZETTE the following information relative to four fair wage contracts awarded by the Department of Public Works, all of which contained the usual fair wage clause providing for the prompt payment of such wages as are current in the district in which the work is to be performed, and for observance on the various works under contract of the prevailing hours of labour, and which otherwise prevents abuses and secures the legitimate rights of the labour employed. No contracts containing the fair wage clause were let during the month by the Department of Railways and Canals.

A statement was also received as to supplies ordered by the Post Office Department, subject to the Regulations for the Suppression of the Sweating System, the securing of fair wages, etc.

DEPARTMENT OF PUBLIC WORKS.

Post office fittings, Yarmouth, N.S. Name of contractor, Art Furniture Co. Ltd., Kitchener, Ont. Date of contract, January 7, 1921. Amount of contract, \$4,387.

Cleaning, painting, renewal of floors and general repairs to Main Immigration Building, Edmonton, Alta. Name of contractor, R. H. Trouth Co. Ltd., Edmonton, Alta. Date of contract, January 12, 1921. Amount of contract, \$1,790.

Transportation and delivery of supplies for Yukon Telegraph Line, Yukon

—British Columbia. Name of contractor, George M. Beirnes, Hazelton, B.C. Date of contract, January 17, 1921. Amount of contract, flat rate for the whole, \$0.22 per pound.

Alterations and additions to residence for Poultry Husbandman—Experimental Farm, Ottawa, Ont. Name of contractors, J. E. Cooper, E. McDonell and D. Beatty, Ottawa, Ont. Date of contract, January 26, 1921. Amount of contract, \$11,100 and for excavation \$3.00 per c. yd. and for concrete new forms \$20.00 per c. yd.

POST OFFICE DEPARTMENT.

The following is a statement of payments made in January for supplies ordered by the Post Office Department, subject to the Regulations for the Suppression of the Sweating System, the securing of fair wages, and the performance of work under sanitary conditions.

Nature of orders.	Amount of orders
Making metal dating stamps and type and other hand stamps and brass crown seals.....	\$ 4,075.05
Making and repairing rubber stamps, daters, etc.....	1,414.21
Supplying stamping materials, pads, ink...	64.00
Supplying mail bag fittings.....	5,378.50
Supplying mail bagging.....	8.54
Making up and supplying letter carriers' uniforms, etc.....	17,682.90
Repairing letter boxes, etc.....	43.70
Supplying letter carriers' satchels.....	3,778.13
Making and repairing scales.....	7,365.00

RECENT INDUSTRIAL AGREEMENTS

THE following is a summary of the more important industrial agreements recently received by the Department. While the conclusion of every industrial agreement implies the acceptance, to a greater or less degree, of the principle of collective bargaining, it should not be overlooked that in a number of cases the agreement was reached only after the employees had been on strike. By verbal agreement is understood a schedule of rates and conditions agreed upon by the employees and the majority of employers, and in effect although not signed. The agreements are arranged by industrial groups.

Metals and Machinery

AMHERST, N.S.—THE ROBB ENGINEERING WORKS LIMITED, AND THE SHOP COMMITTEE REPRESENTING THE BOILER SHOP. Agreement in effect from August 30, 1920 until September 1, 1921, unless thirty days' notice of desired change be given.

Hours of labour: forty-eight per week, eight per day. Night shift, excepting Saturday and Sunday, 7 p.m. to midnight and 1 a.m. to 6 a.m., fifty hours per week. Night shift to consist of not less than seven men.

Overtime, over eight hours day or night shift, time and one half; Sundays and holidays, double time. Overtime when travelling, straight time.

Rates of pay: an increase of 20 per cent generally. Superintendent to have power to hire or discharge men at any time. In a general reduction, married men to be retained and efficiency and seniority to regulate order in which men are laid off.

Employees having grievances whether specific or general may present case to proper officer of the Company. If said employees desire representation by a committee and so notify their foreman, an officer of the Company will, in working hours, meet a committee of

employees and if possible adjust the grievances. If no adjustment is effected work not to cease until committee shall have met highest officer of the Company. Grievances to be concluded within thirty days.

Foods, Liquors and Tobacco

HAMILTON, ONT.—LOCAL MANUFACTURERS, AND CIGARMAKERS' UNION No. 55. Scale in effect from January 10, 1921.

Piece rates given for various classes of work. These have been reduced \$1 per M. on previous rates, bringing Union under the 1918 Bill.

All jobs not on bill to be settled by the Executive Board.

Wages to be paid weekly.

Members placed on limit to be allowed to complete limit in such time as they are competent of so doing.

All stock to be properly stripped and booked and fillers in working order. After lay-offs or holidays members working up till time of lay-off or holiday not to be discharged for at least one week thereafter.

Apprentices: one to a shop working two men; two to ten men; three to twenty men; four to thirty men; five to fifty men. Limit, five apprentices.

Printing and Publishing

CALGARY, ALTA.—EMPLOYING JOB PRINTERS, AND TYPOGRAPHICAL UNION No. 449. Agreement in effect from May 1, 1920 to October 31, 1920, and renewal until April 30, 1921.

Employers to employ in composing room and departments thereof only members of No. 449, provided union furnishes sufficient members. Non-Union help engaged when supply of union men fails to continue in employment until positions can be filled by union men. No union members to

execute struck work for unfair employing printers or publications.

Union agrees limitation of the product of its members to be prejudicial to interests of both parties, and therefore no limitations to be put on output of any employee.

No members of No. 449 to engage in any strike or boycott against employers who are parties to this agreement.

Positions of employees enlisting in time of war to be restored to them on their return, provided such positions shall not have been abolished; employees disabled to be given work suited to their qualifications.

Foreman to have right to employ help and to discharge for incompetency, for neglect of duty, for violation of office rules, and to decrease the force; in last case persons last employed to be first discharged; in case of an increase in the force employees to be reinstated in reverse order to that of discharge; after which other help may be employed.

Complaints of employees against foreman and differences which cannot be adjusted by conciliation to be referred to local joint standing committee—decision to be final and binding.

Substitutes or extras to work by hour at regular scale rate until their qualifications have been demonstrated. If proving incompetent they may be removed and paid for time put in and no more. A journeyman, before working fifteen days (five of which must be consecutive) if not notified in writing by foreman of incompetence to be considered as competent at time of entry.

In offices with no regular machinist, at least one machinist-operator to be employed; same to receive 50 cents per shift extra.

Unskilled labour may be employed, up to one person to each fifteen machines.

No more than one machine learner, exclusive of apprentices in last six months of their apprenticeship to be employed in any office at the same time, and no regular to be laid off while a learner is working. Members of the Chapel to be given preference in the selection of beginners, rule of priority to govern.

No learner of a machine to work more than the number of hours provided for on the shift on which he is working provided that, if no journeymen are available he shall be allowed to work overtime; same to receive compensation for overtime at same ratio to regular rate as journeymen.

Beginners on machines (night or day) to receive following rate: first five weeks, two-fifths of journeymen's scale; next five weeks, three-fifths; next five weeks, four-fifths. Learners who, at expiration of fifteen weeks, have not attained to standard of efficiency as operators to be granted extension of time not exceeding three months.

Apprentices: not more than one for first five journeymen; two up to ten journeymen; and one additional for each additional ten; no more than five apprentices in any one office; to serve five years before becoming journeymen members of the union.

Apprentice scale: first year, one-quarter of journeymen's scale; second year, one-third; third year, one-half; fourth year, two-thirds; fifth year, three-quarters.

Overtime rate, time and one-half; after three hours, double time; holidays, at overtime rate; Sundays, double time.

Wages: Per week—machine men and machinists, foremen, make-ups, bankmen, headmen, proofreaders, admen and employees engaged in hand composition and distribution, except as herein otherwise provided, \$45 for day work; \$48 for night work. Hours per week: day, 45; night, 44.

PRINCE ALBERT, SASK.—LOCAL EMPLOYING PRINTERS, AND TYPOGRAPHICAL UNION No. 705. Agreement in effect from November 1, 1920, until April 30, 1921.

The agreement of the above Union was summarized in the December 1919 issue of the LABOUR GAZETTE, page 1485. In November, 1920, it was altered in a few particulars as follows:

Wages for day work: Per week of 48 hours—make-ups, admen, bankmen, journeymen engaged in hand composition or distribution, operators of type

setting machines, machine tenders (machinists), \$45 per week; machinist-operators, \$45 per week plus 25 cents per day per machine.

Wages for night work: Per week of 45 hours—make-ups, admen, bankmen, journeymen, engaged in hand composition or distribution, operators of type-setting machines, machine tenders (machinists) \$47; machinist operators, \$47 plus 25 cents per night per machine.

Transportation—Electric Railways

QUEBEC, QUE.—QUEBEC RAILWAY LIGHT & POWER COMPANY, AND MONTMORENCY DIVISION SHOPMEN. Rules and rates in effect from November 1, 1920 to October 31, 1921, and thereafter unless 60 days' notice be given.

Hours of labour, eight per day. Day work in plants and for road employees from 7.30 a.m. to 4.30 p.m. daily except Sunday, with one hour for dinner. Night work, 8 p.m. to 5 a.m. with one hour for lunch. Regular overtime until 10 p.m., pro rata. Occasional overtime, after 8 p.m. on week days, at overtime rates. Holidays and Sundays, overtime rates.

Travelling time and expenses when going to and from a temporary position to be paid for.

In reduction of force, seniority and competency to govern. Employees so dismissed to have preference when staff is brought back to normal.

Grievances to be brought to attention of superior officer by employee in person or represented by a committee. If no settlement is reached case shall be brought before the General Manager.

Wages—Montmorency Division: Per hour—machinists, blacksmiths, boiler-makers, car and locomotive painters (letterers), 64 cents; car and locomotive painters (other), carpenters (locomotives, cars and benches), 59 cents; car repairers, car inspectors, pipe fitters, apprentices, 54 cents; electricians first class, 64 cents; second class, 54 cents; all helpers, pit hands and oilers, 49 cents.

GALT, ONT.—GRAND RIVER RAILWAY COMPANY AND LAKE ERIE AND NORTHERN RAILWAY COMPANY, AND EMPLOYEES. Agreement effective December 1, 1920, until August 31, 1921, and thereafter until 30 days' notice in writing.

Employees in train service, conductors, motormen, brakemen and trolley-men:

Wages per hour, conductors and motormen in passenger and express train service, 1st year, 50 cents; 2nd year, 51 cents; 3rd year, 52 cents. Employees in freight, work train and snow plow service; conductors and motormen, 54 cents; senior brakemen, 51 cents; trolley-men, 48 cents. Hours of work, nine per day. Overtime for trainmen, time and one-half.

An employee suspended or dismissed desiring to appeal to send written request to immediate superior within three days; hearing to be granted within five more days. If not satisfied with decision, employee may appeal to the General Manager.

One complete uniform to be provided per year.

Substation Operators.—Wages: Per month—Brantford and Simcoe, \$120; Preston, \$120 and \$115; Kitchener, \$110 and \$100.

Hours of work, nine hours exclusive of meal period. Overtime, time and one-half.

Signal operators.—Wages: Per month, \$100.

Signal operators, after two or more consecutive years' employment, two weeks' leave of absence each year on full pay. No overtime rate.

Linemen and groundmen.—Wages: Per hour—linemen, 55 cents; groundmen, 45 cents. Hours of labour, nine per day. Overtime, time and one-half.

ST. CATHARINES, ONT.—THE NIAGARA, ST. CATHARINES AND TORONTO RAILWAY COMPANY, AND CERTAIN OF ITS EMPLOYEES. Agreement in effect from November 1, 1920 to October 31, 1921, agreement to be open for revision on 30 days' notice after September 30, 1921.

Employers to meet and treat with officers and committees of employees on all grievances and disputes. Those not thus settled to be arbitrated under the Industrial Disputes Act.

Passenger service.—Hours of labour; nine per day.

Wages: Passenger conductors and motormen: Per hour—1st year, 46 cents; 2nd year, 48 cents; 3rd year, 50 cents; thereafter, 52 cents. When training a student, 25 cents extra per day or part of day. Overtime: 15 cents per hour over regular rate for first hour; after ten hours, time and one half.

Passenger trainmen to wear uniform selected by company and committee of employees, uniform not to cost over \$50, one-half total cost being paid by employee.

Freight train service.—Employees in freight train service to have minimum of 10 hours per day. Sundays or holidays, half day's pay for 5 hours or less, or full day for service beyond 5 hours. Overtime: first hour over 10 hours, 15 cents per hour additional; thereafter time and one-half.

Wage scale: Per hour—freight motormen and conductors, 1st and 2nd years, 50 cents; 3rd year, 52 cents; thereafter, 54 cents. Trainmen, 1st year, 43 cents; 2nd year, 44 cents; 3rd year, 45 cents; thereafter, 46 cents.

Freight train conductors and motormen, with students, 25 cents extra per hour or part of day.

Company to pay for meals of all trainmen out over ten hours on snow plow work.

Barn and shop men.—Hours per day, 10 hours until shop conditions permit of 9-hour day.

Wages: Per hour—carpenters, 48 to 55 cents; carpenters' helpers, 35 to 48 cents; blacksmiths, 50 to 55 cents; blacksmiths' helpers, 45 to 50 cents; painters, 48 to 55 cents; truck and pitmen, 40 to 50 cents; controller and wiring, 42 to 55 cents; controller and wiring (helpers), 35 to 42 cents; armature and field department, 42 to 55 cents; armature and field helpers, 35 to 42 cents; air brake department, 40 to 55 cents; car cleaners, 35 to 40 cents;

shop cleaners, 35 to 45 cents; machinist department, 42 to 55 cents.

Substation operators.—Minimum wage, per month, \$105.00. Two weeks' leave of absence with pay each year, after one year's service.

Linemen and groundmen.—Hours of labour, nine per day. Overtime after tenth hour, time and one half.

Wages: Per hour—linemen, 50 to 55 cents; groundmen, 40 to 50 cents.

Baggagemen, shedmen and watchmen.—Minimum rates: Per month—baggagemen, \$90; shedmen, \$75; watchman, \$70.

Towermen.—Minimum wages: Per month—first class, \$90; second class \$80.

Two weeks' leave of absence each year with pay, after one year's service.

Section foremen and men.—Hours of labour, nine per day; overtime after tenth hour, time and one half.

Wages: Section foremen, \$110 to \$120 per month; sectionmen, 40 to 45 cents per hour.

Section foremen in employ of company two years or over to receive one week's holidays with pay each year.

Bridge and building department.—Hours of labour, nine per day. Overtime after tenth hour, time and one-half.

Wages: Per hour—carpenters, 43 to 53 cents.

Bonding Department.—Hours of labour, nine per day. Overtime after tenth hour, time and one-half.

Wages: Per hour—bonders, 40 to 55 cents.

Any employee suspended or dismissed to be entitled to a hearing within three days, with right to produce witnesses and to have assistance if he so desires.

Transportation—Water

PORT ARTHUR, SAULT STE. MARIE, COLLINGWOOD, OWEN SOUND, MIDLAND, TORONTO, KINGSTON, SARNIA AND ST. CATHARINES, ONT.—SHIP OWNERS, AND LOCAL COUNCILS OF THE NATIONAL ASSOCIATION OF MARINE

ENGINEERS OF CANADA. Verbal agreement in effect for season of 1921.

Engineers to have expenses paid, first class accommodation, from lake ports nearest homes to ship and back again.

Tonnage to be construed herein as gross tons. Thirty days to constitute a month.

Overtime 75 cents per hour for time over 12 hours if boat carries only one engineer. All ratings in all classes to include board and accommodation excepting passenger ferry steamers.

Out of town work, nine hours per day. Board and transportation to be paid by employer. Travelling time on outside work to be paid for during working hours, and one way outside of working hours.

No discrimination against employees for being or not being union members.

One apprentice for journeymen up to three. Thereafter, only helpers to be employed. Apprentices to serve five years and to receive journeymen's pay upon passing examination.

A permanent conference board to be appointed consisting of two representatives from each party and if desired a fifth appointed by them. The Board to meet once a month to discuss and deal with matters affecting the trade and to deal with complaints or suggestions for improvement.

Any journeyman performing defective work to make such work good in his own time. Disputes over such matters to be settled by Conference Board.

TORONTO, ONT.—MASONS' SECTION OF BUILDERS' EXCHANGE AND BRICKLAYERS' UNION, No. 2 OF THE BRICKLAYERS', MASONS' AND PLASTERERS' INTERNATIONAL UNION. Agreement in effect from January 1, 1920 to December 31, 1920, and extended until December 31, 1921.

The above mentioned agreement was summarized in the April 1920 issue of the LABOUR GAZETTE, page 453.

Civic schedules

MONCTON, N.B.—THE CITY COUNCIL OF MONCTON, N. B. AND THE CIVIC EMPLOYEES' FEDERAL LABOUR UNION No. 51. Agreement in effect from January 1, 1921, and thereafter unless thirty days' notice of termination be given.

No discrimination against any employee for serving on committee or as delegate or representative of employees.

Employees not to be disciplined, suspended or dismissed without full investigation.

Grievances to be referred to official in charge of Department; Failing adjustment, to chairman of Department, and further to the Mayor and City Council, if necessary, through the grievance committee.

In reduction of staff, employees to be laid off according to seniority and efficiency.

Hours of labour: nine hours per day. Overtime, and Sundays and holidays time and one-half for men on hourly pay.

Wages: Per week—street foremen, \$32; drivers double teams, \$27; drivers

single teams, \$25. Wages: Per hour—labourers (minimum) 45 cents; men on dump, 45 cents.

Fire Department.—Salaries: per month—motor engineers, \$133; assistant motor engineers, \$125; salvage corps driver, \$115; drivers of chemicals, \$100. Hours and shifts to be arranged by fire committee, fire chiefs and operators. Not less than 14 days' annual vacation with pay after one year's service.

Electrical Department.—Salaries, per month—City electrician and wire inspector, \$175; assistant electrician and lineman, \$125. Two weeks' holidays per year with full pay after one year's service.

Water Department.—Salaries, per month—foreman of water works and plumbing inspector, \$175; per day—pipe layer, \$5; pipe layer's helper, \$4.20; operators at pumping station (8 hrs.), \$4.50; operators' helpers, \$4; caretakers of reservoirs, \$3.25 and \$3.50; labourers, \$4.05. Charge hand at pumping station per month, \$185.

Hours of labour, nine per day. Overtime, time and one-half—this not to apply to caretakers of reservoirs.

Foreman of water works and plumbing inspector and charge hand at pumping station to be entitled to two weeks' holidays per year with full pay, after one year's service.

Other employees.—Salaries, per year—City Clerk and Treasurer and Receiver of Taxes, \$2,600; Accountant and Purchasing Agent, water and light department, also deputy City Clerk and Treasurer, \$2,200. Per month—cashier, \$85; stenographers, \$65 and \$80; chairman of assessors, \$150; market clerk, \$125; janitor (for day of 12 hours) \$100; street commissioner, \$160; building inspector, \$140. Monthly employees after one year's continuous service, two weeks' vacation with pay.

PRICES, RETAIL AND WHOLESALE IN CANADA, JANUARY, 1921

THE downward movement of prices continued, decreases appearing in nearly all lines, the most important, however, being in grain and in textiles. In fuel, coal continued steady but coke and gasoline were down.

In retail prices the average cost in sixty cities of a family budget of twenty-nine staple foods was \$14.48 at the beginning of January as compared with \$14.84 at the middle of December, 1920, \$15.30 at the middle of January, 1920, and \$7.73 at the middle of January, 1914. There were slight decreases in nearly all the items, but the chief decreases were in meats and in dairy products. Potatoes were higher in some of the cities but lower in others, averaging almost the same as in December.

In wholesale prices the index number was down to 281.3 for January as compared with 290.5 for December, 1920, 336.4 for January, 1920, 286.5 for January, 1919, and 136.5 for January, 1914. The chief changes for the month were in grain and textiles but there were decreases in nearly all of the groups. As compared with prices a year ago all groups were lower except fuel, building materials, house furnishings, drugs and chemicals. The index number of wholesale prices in Canada calculated by Professor H. Michell of McMaster University was down to 281.3 at the end of January as compared with 221.6 at the end of December. It is pointed out by Professor Michell that since May, 1920, his index number, which includes 20 foods and 20 materials, and is designed to reflect trade conditions sensitively, has fallen four per cent each month.

The table of retail prices and rentals shows the prices at the beginning of January of over one hundred staple foodstuffs, groceries, coal, wood and coal oil, and the rent for 6-roomed houses in some sixty cities throughout Canada having a population of 10,000 or over. All prices are for delivered goods. The

exact quality for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city are the averages of quotations reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the Correspondents of the LABOUR GAZETTE.

Statistics similar to these have been published each month since the beginning of 1910, the figures being secured at the middle of each month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers who did a considerable business with workingmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget in the LABOUR GAZETTE was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

For some time it has been felt that it would be well to place the statistics of retail prices on a broader basis so that it would finally be possible to calculate an index number of retail prices to correspond to that of wholesale prices, and to secure quotations from a larger number of dealers as well as for a greater list of commodities. In 1918, the Cost of Living Commissioner was requested to secure quotations of prices of the principal foods and groceries from a comprehensive list of retail butchers and grocers in each city, care being taken that a fair

number of those dealing extensively with workingmen were included. This work was in 1919 transferred to the Board of Commerce and in 1920 to the Dominion Bureau of Statistics. The statistics so collected have been used to supplement the figures reported by the LABOUR GAZETTE correspondents. For January, 1921, the prices reported by the butchers and grocers to the Bureau of Statistics and to the Department through the LABOUR GAZETTE correspondents have been averaged, and in future the retail prices of food published in the LABOUR GAZETTE will be compiled on this basis. As additional time is required for the collection and compilation of figures on such an extensive scale, the statistics are secured for the beginning of each month instead of for the middle as in previous years.

The Bureau of Statistics also secures quotations for fuel from dealers, and the figures so obtained are used to supplement the figures secured by the Department. During recent years the Department has made special inquiries into rentals, one in 1915 for the Board of Inquiry into the Cost of Living, the statistics so secured being kept up to date, and another in 1919 when an extensive inquiry was begun into the rents for houses of various sizes and conditions. The information secured in these inquiries has been used to supplement that furnished to the LABOUR GAZETTE correspondents by real estate agents, etc., and when the investigation has been completed it is expected to provide a satisfactory basis for statistics as to the rentals for various sizes and classes of houses. In the meantime the figures published for fuel and rent are secured as in previous years.

As the change in the methods of collecting and compiling the statistics might involve some differences and break the continuity of the series of average prices used for the family budget the figures for the past few months have been averaged on the new basis and budgets calculated. The following table shows the budget calculated from aver-

age prices from the LABOUR GAZETTE and from the Bureau and indicates the continuity to have been only slightly disturbed by the change.

Labour Gazette		Bureau of Statistics	
Oct. 15....	\$15.83	Nov. 1.....	\$15.49
Nov. 15....	15.32	Dec. 1	14.84
Dec. 15....	14.84	Jan. 1.....	14.48
Jan. 15....	14.51		

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts, with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences or with incomplete conveniences.

The weekly budget for a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed in similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. As market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportion of expenditure on the various foods therefore tends to be maintained. At times when the price of an article heavily weighted for this purpose rises (or falls) abnormally the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting the quantities are

* December only.

estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the difference in quality. It was estimated, when the budget was first published in 1912, that these calculations represented from sixty to eighty per cent of the expenditure of an ordinary family, according to the total income. For the average family of five the expenditure on these items of food, fuel, light, and rent would be perhaps two-thirds or about sixty-five per cent of the total income. While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were designed to afford a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruit, fresh and canned vegetables, etc.; so that the comparative expenditure would be little changed.

The index number of wholesale prices is based on the quotations for 271 commodities, and is the simple average of the percentages of current prices of the several commodities in relation to the average prices for the base period, 1890-1899, these being therefore made equal to 100. The quotations for most farm products are obtained weekly and averaged for the month, the quotations for other commodities are taken for the middle of the month. The table of index numbers shows the changes by groups and sub-groups for the previous month and for corresponding months back to 1913.

Retail Prices

Meats showed a number of decreases chiefly in beef. Lard averaged considerably lower. Eggs, milk, and butter

were somewhat lower. Bread was lower at Sydney, New Glasgow, Halifax, Moncton, Fredericton, Sorel, St. Hyacinthe, Orillia, and New Westminster. Flour was down in nearly all of the cities and rolled oats and cornmeal declined in several. There was a general decrease in rice and tapioca. Canned vegetables were down. Potatoes were higher in Nova Scotia, but were lower in Ontario. Evaporated apples and prunes were lower. Sugar, tea, and coffee showed slight decreases. Coal averaged slightly lower.

Wholesale Prices

GRAINS AND FODDER.—Wheat, Manitoba Northern, No. 1, rose from \$1.99 per bushel to \$2.05 but fell to \$1.79. Ontario winter wheat rose from \$1.90 to \$1.95, but fell back to \$1.90. Barley fell from 91c. to 80c. and oats from 53c. to 46c. at Winnipeg. American corn No. 2 fell from \$1.15 to 88c. Flaxseed fell from \$2.09 to \$1.76. Hay was \$1.00 per ton lower at \$29.00 at Montreal and Toronto. Straw was down to \$13.50-\$14.00 per ton. Bran and shorts were down to \$40.00 per ton.

ANIMALS AND MEATS.—In Winnipeg, cattle fell from \$9.00 per hundred pounds to \$8.00 and at Toronto from \$11.00 to \$9.50. Beef fell from 29c. per pound to 22c. Hogs were down to \$14.25 per hundred pounds at Toronto. Bacon was down from 45c. per pound to 43c. and ham from 36c. to 34c. Lard fell to 24c. Sheep were firmer at \$5.00-\$7.00 per hundred pounds. Fowl rose from 33c. to 35c. per pound at Montreal and turkeys fell from 56c. to 53c. but rose again to 60c.

DAIRY PRODUCTS.—Butter fell to 52c. per pound at Montreal but rose to 55c. At Toronto butter advanced from 60c. to 61c. Cheese rose from 24c. to 28c. Eggs fell from \$1.10 per dozen to 80c. at Montreal.

FISH.—Canned lobster fell from 40c. per pound to 35c. Whitefish were lower at Toronto at 14-15c. per lb. The export market for dried cod continued to be quiet but stocks were gradually diminishing. One sale was reported

INDEX NUMBERS OF WHOLESALE PRICES BY GROUPS OF COMMODITIES FOR JANUARY, 1921, DECEMBER, 1920, JANUARY, 1920, 1919, 1918, 1917, 1916, 1915, 1914, AND 1913

(Average price 1890-1899=100.)

(*) Preliminary figures. (†) Eight commodities off the market, *fruits, vegetables, etc. One line of spelter was dropped in 1915.

as low as \$7.50 per quintal. There was a moderate business in salt fish, and herrings were selling at \$6.50 per barrel.

FRUITS AND VEGETABLES.—Oranges were lower at \$4.75-\$6.00 per box. Potatoes fell from \$1.60 per bag to \$1.35 at Montreal. Dry beans were down to \$3.75 per bushel. Canned peas fell to \$1.65 per dozen and canned corn to \$1.45-\$1.50.

MISCELLANEOUS FOODS.—Flour was down from \$11.10 per barrel to \$10.90 at Toronto for spring wheat patents. Soda biscuit fell 1c. to 16c. per pound. Sugar was unchanged. Glucose, molasses, honey, pepper, and cream of tartar were lower.

TEXTILES.—Wool continued to sell at lower prices, the highest being 28c. and 35c. per pound. Yarn and underwear were lower. Raw cotton recovered at New York, rising from 15.80c. to 17.90c. per pound. Manufactured cottons were reduced approximately 30 per cent. Raw silk was again lower, and spool and machine silk were reduced 10 per cent. Hessians again averaged lower. Flax fibre, tow and oil cloth declined.

HIDES, LEATHER, BOOTS AND SHOES.—Beef hides and calf skins continued lower at 7c. per pound. Horse hides fell to \$2.00-\$3.00 each. Some lines of leather declined again. Harness leather

was down to 74-75c. per pound and waxed uppers to 48c. Some lines of boots were reduced in price.

METALS AND IMPLEMENTS.—Pig iron fell from \$54.30 per ton to \$46.30. Iron bar, black sheets, galvanized sheets, and steel bars eased off. Aluminum, brass, soldering coppers, and crow bars declined.

FUEL AND LIGHTING.—Coke, both furnace and foundry, at Connellsville declined, being down to \$6.75-\$7.00 and \$5.00-\$5.50 per ton respectively. Gasoline prices were reported to be weak.

BUILDING MATERIALS.—Shingles declined at St. John and rough lumber, shiplap, and flooring were down at Victoria, B.C. Soil pipe, lead pipe, red lead, nails, copper wire, white lead, linseed oil, turpentine, and shellac declined.

HOUSE FURNISHINGS.—In furniture some lines were reduced 10 per cent.

DRUGS AND CHEMICALS.—Alum, bleaching powder, carbolic acid, and soda ash were lower.

MISCELLANEOUS.—In raw furs, mink skins advanced \$2.00 each. In pulp and paper, wrapping paper and raw pulp were lower but newsprint continued higher. Rope, crude rubber, laundry starch and laundry soap declined.

PRICES IN THE UNITED KINGDOM AND IN OTHER COUNTRIES

THE prices movement in other countries has shown the same general tendencies as in Canada, there having been an almost constant increase until the summer of 1920, after which there

was a decline. In some instances the decrease did not occur until the end of the year. The accompanying tables and the following notes give the latest information available as to the movement.

United Kingdom

The Ministry of Labour reported the cost of foods in January to be 178 per cent higher than before the war, while the cost of maintaining an average workingman's family at the prewar standard was 165 per cent higher. The decrease in foods for the month was due to lower prices for flour, bread, bacon, margarine, sugar, tea, butter, eggs, and potatoes. Milk and fish showed slight advances. Rents were about 42 per cent higher than before the war. Clothing was reported to be 290 per cent higher than before the war, but a month previous it was 300 to 310 per cent higher. Fuel and light were up 140 per cent.

Italy

The Municipal Labour Office at Rome reported the general level of food prices in December, 1920, to be 3.9 per cent higher than in November and 275 per cent higher than in 1914. The general level of prices was calculated to be 278 per cent higher than in 1914. The Municipal Labour Office of Milan reported the weekly cost of maintaining a prewar standard of living in Milan for a family of five in December, 1920, to be 434 per cent higher than in 1914, foods being up 435 per cent. The increase over the previous month was 3.9 per cent in foods. The Municipal Statistical Office of Florence reported the weekly expenditure on foods for a family of five in December, 1920, to be 382 per cent higher than in 1914 and the total cost for the family to be 346 per cent higher.

Sweden

The Bureau of Social Statistics reported the cost of maintaining a standard prewar budget for a typical Swedish household in December, 1920, to be 194 per cent higher than in July, 1914, for food, the increase in Stockholm being 197 per cent in food. Including all items in the calculation the cost of living was found to be 172 per cent higher.

Norway

The Norwegian Central Bureau of Statistics reported the expenditure of a family on food in November, 1920, to be 242 per cent higher than in July, 1914, and the cost of living for all items to be 240 per cent higher.

Finland

The Statistical Office of Finland reported the cost of food in September, 1920, to be 1034 per cent greater than in July, 1914, and the cost of all items for a family to be 932 per cent higher.

Denmark

The commercial paper *Finanstidende* (Copenhagen) has calculated the index number of wholesale prices in Denmark, the base period used being July, 1912-June, 1914, = 100. The index number for January, 1921, was 341 as compared with 340 in January, 1920, and 403 in November, 1920.

Germany

The German Statistical Office has published index numbers for various German towns based on the needs of a family of two adults and three children, and includes prices of common foods, fuel and light, and the rent of two rooms

and kitchen. The base period used for the price level was February, 1920, = 100. The index numbers for November, 1920, were as follows: Berlin, 139, Hamburg 139, Munich 131, Breslau 138, Dresden 142, Frankfurt 134, Essen 113, Nürnberg 141, Stuttgart 151.

The Berlin Statistical Office has reported the minimum cost of living to have risen from 28.95 marks in November, 1913, to 316 marks in November, 1920, for a married man with two children. Of this amount 136 marks were required for food, 9 marks for housing, 22 for light and heat, 70 for clothing, and 79 for miscellaneous items.

United States

The prices movement continued downward in the United States as indicated by the various index numbers. Bradstreets', New York, reported its index number of wholesale prices to have fallen continuously for twelve months, but that there appeared to be something like a beginning of an approach to stability, the decline between the first of January and the first of February being the smallest since June. There were a number of increases in several of the groups, particularly in textiles and in drugs and chemicals, the former of which were the first to fall last year. In retail prices and in the cost of living calculations are made and published by the Commission on the Necessaries of Life for the Commonwealth of Massachusetts and by the National Industrial Conference Board of New York, an association of

employers, as well as by the United States Bureau of Labour Statistics. Figures of the first and third named bodies were reproduced in the January issue of the LABOUR GAZETTE on page 113. The cost of living index number published by the first named was down to 179.6 for January, 1921, as compared with 183.9 for December, 1920, 192.0 for January, 1920, and 167.5 for January, 1919. The January, 1921, group index numbers on the basis, 1913 = 100, were as follows: Food, 171.5; Clothing 219.9; Shelter, 151.7; Fuel, 188.9; Sundries, 192.0; the chief decreases being in Food and Clothing. The high point for all groups was reached in July at 202.6, the decline from July to January being therefore about 10 per cent, so that the January, 1921, level was about 7 per cent below January a year before, but 7 per cent higher than in January, 1919. The index number for Clothing reached its high point in May, and that for Food in July. The calculation of the National Industrial Conference Board, covering industrial centres throughout the United States, indicated that the average cost of living in November, 1920, was 93.1 per cent higher than in July, 1914, as compared with an average cost 104.5 higher in July than in 1914, the decrease from July to November being therefore nearly 10 per cent, which is approximately the same as that calculated by the Massachusetts Commission. Similar decreases were shown in food and clothing, with increases in rent, fuel and sundries for the six months period.

FATAL INDUSTRIAL ACCIDENTS REPORTED DURING THE LAST QUARTER OF 1920

DURING the last quarter of 1920, the Department received reports of 314 fatal industrial accidents, 293 of which pertain to the fourth quarter, 18 to the third quarter, and 3 to the first quarter of the year. Of the 293 fatalities reported for the last quarter, 104 occurred in October, 106 in November, and 83 in December. For the previous quarter 304 accidents were reported, and in the corresponding quarter of 1919 there were 291 fatalities. The greatest number of fatalities in any one group

occurred in the mining and quarrying industries, 56 deaths being reported, the steam railway service group was responsible for 45 deaths, the lumbering industry for 35, and the building and construction industries for 28. In the following statement are listed the accidents as reported to the Department. This statement, while not necessarily including all the fatal industrial accidents that may have occurred, has been prepared from information received from all sources available.

FATAL INDUSTRIAL ACCIDENTS DURING THE LAST QUARTER OF 1920

Trade or Industry.	Locality.	Date.	Age.	Cause of fatality.
METALS, MACHINERY AND CONVEYANCES—				
Labourer at foundry.....	Galt, Ont.....	Oct. 6	Burned by hot sand.
Doorman at steel plant.....	Sault Ste. Marie, Ont....	" 22	25	Crushed under door.
Employee at shipyard.....	North Vancouver, B.C....	" 11	Knocked from scaffold—crushed by beam.
Employee at shipyard.....	Halifax, N.S.....	" 24	33	Struck by crane load—fell in drydock.
Machinist.....	Montreal, Que.....	" 27	35	Fall of shaft.
Labourer at steel plant.....	Hamilton, Ont.....	" 19	21	Crushed under steel.
Labourer at hardware plant.....	Pictou, Ont.....	" 23	Crushed finger—infection.
Workman at steel foundry.....	Welland, Ont.....	Nov. 8	57	Crushed by derrick.
Employee at steel works.....	Hull, Que.....	" 23	26	Explosion of molten metal (died Dec. 9)
Carpenter at steel plant.....	Maple Grove, Que.....	" 8	28	(No particulars).
Machinist.....	Vancouver, B.C.....	" 30	52	Fell into coal bunker.
Roller at steel plant.....	Trenton, N.S.....	Dec. 8	50	Clothing caught in spindle.
Employee at pipe works.....	Welland, Ont.....	" 6	38	Struck by train.
FOOD, TOBACCO AND LIQUOR—				
Employee at warehouse.....	London, Ont.....	Oct. 2	51	Crushed between floor and elevator.
Kettleman at brewery.....	Sault Ste. Marie, Ont....	" 3	30	Crushed by falling keg.
Employee at brewery.....	Toronto, Ont.....	" 6	17	Struck by counterweight on elevator.
Stableman at dairy.....	Ottawa, Ont.....	" 10	55	Fell from window.
Workman with grain company.....	Depot Harbor, Ont.....	" 12	Fell from platform.
Yardman with flax company.....	St. Mary's, Ont.....	" 20	70	Fell off ladder.
Employee at ice house.....	Montreal, Que.....	Nov. 2	50	Fell from loft.
Employee at restaurant.....	Merritt, B.C.....	" 23	Clothing caught fire.
Labourer at packing plant.....	Toronto, Ont.....	" 4	Crushed between truck and freight car door.
Labourer at packing plant.....	Chatham, Ont.....	" 26	Fell in scalding vat.
Labourer at sugar factory.....	Wallaceburg, Ont.....	" 7	Crushed between car and crane.
Cook at biscuit factory.....	St. Hyacinthe, Que.....	" 26	60	Burned.
Mechanic at abattoir.....	Toronto, Ont.....	Dec. 20	66	Caught in shafting.
TEXTILES, CARPETS AND CORDAGE—				
Electrician at textile plant.....	Verdun, Que.....	Nov. 9	47	Electrocuted while installing a motor.
Carder at textile plant.....	Guelph, Ont.....	Dec. 20	16	Crushed finger in machine; infection.

FATAL INDUSTRIAL ACCIDENTS DURING THE LAST QUARTER OF 1920—Continued

Trade or Industry.	Locality.	Date.	Age.	Cause of fatality.
PULP, PAPER AND FIBRE—				
Rigger at paper plant.....	Sturgeon Falls, Ont.....	Oct. 3	20	Struck by belt.
Employee at pulp mill.....	Beaver Cove, Ont.....	Nov. 8	30	Caught in shafting.
Employee at paper plant.....	Sturgeon Falls, Ont.....	" 21	18	Resting on belt when machinery started.
Employee at paper plant.....	Three Rivers, Que.....	Dec. 10	Struck by crane.
PRINTING AND PUBLISHING—				
Machinist at lithographing plant...	Montreal, Que.....	Oct. 6	Fell from ladder.
WOODWORKING AND FURNITURE—				
Engineer at sawmill.....	Baynes Lake, B.C.....	Oct. 4	62	Artery severed by double ended turning tool.
Employee at mill.....	Gloucester Co., N.B.....	" 5	Caught in saw.
Employee at lumber mill.....	Douglstown, N.B.....	" 8	Struck by log.
Cleaner at lumber mill.....	Bathurst, N.B.....	" 12	16	Caught on slasher saw.
Labourer at mill.....	Northumberland Co. N. B.....	" 15	20	Cut by saw.
Employee at lumber mill.....	Anse aux Cousins, Que..	" 15	Caught in shafting.
Millhand.....	Abbotsford, B.C.....	" 23	50	Struck by piece of slab.
Employee at clothes-pin factory...	Orillia, Ont.....	Nov. 18	39	Electrocuted.
Labourer at organ plant.....	Goderich, Ont.....	" 19	79	Crushed finger; infection.
Employee at mill.....	Vancouver, B.C.....	Nov. 13	Struck by flying timber.
Workman with basket company.....	Hillsdale, Ont.....	Dec. 31	Struck by tree.
CLAY, GLASS AND STONE—				
Workman at clay plant.....	London, Ont.....	Oct. 21	44	Crushed by elevator.
Employee at stone plant.....	Montreal, Que.....	" 28	25	Struck by door being lowered from derrick.
Engineer at stone plant.....	Burnt River, Ont.....	Nov. 1	40	Dynamite explosion.
Fireman at cement plant.....	Hanover, Ont.....	" 12	Crushed under engine.
Repairman at cement plant.....	Port Colborne, Ont.....	" 25	Caught in shafting.
Employee at cement plant.....	Montreal, Que.....	Dec. 9	40	Caught in shaft.
Employee at crushed stone works...	St. Vincent de Paul, Que.	" 16	Crushed while coupling cars.
PAINTS, OILS, CHEMICALS AND EXPLOSIVES—				
Fireman at chemical plant.....	Thornbury, Ont.....	Oct. 14	33	Burned.
Heater with oil company.....	Sarnia, Ont.....	Nov. 9	31	Fell off scaffold.
STEAM RAILWAYS—				
Conductor.....	Nanaimo, B.C.....	Oct. 2	31	Fell from car.
Foreman.....	Melville, Sask.....	" 12	39	Scalded—arch tube plug blew out of engine.
Trainman.....	Chambord, Que.....	" 15	21	Run over by train.
Fireman.....	Truro, N.S.....	" 13	20	Deraillment.
Fireman.....	Oxdrift, Ont.....	" 20	..	Collision—jumped off engine.
Fireman.....	Port Moody, B.C.....	" 26	30	Jumped from runaway train and fell under wheels.
Yardman.....	Montreal, Que.....	" 15	63	Lost footing and was run over.
Agent.....	Redditt, Ont.....	" 23	32	Crushed by rail-loader.
Sectionman.....	Koien, B.C.....	" 5	68	Engine struck hand car.
Sectionman.....	Adirondack, Que.....	" 27	52	Struck by engine.
Labourer.....	Wabos, Ont.....	" 6	52	Struck by train.
Labourer.....	Raith, Ont.....	" 31	33	Fell under train.
Carman.....	Stellarton, N.S.....	" 16	55	Struck by shunting car
Car repairer.....	Moose Jaw, Sask.....	" 26	36	Struck by falling rail.
Employee.....	Westmoreland Co. N.B.	Nov. 8	48	Struck by train.
Employees (2).....	Humphreys, N.B.....	" 14	36—30	Struck by train
Employee.....	St. Boniface, Man.....	" 10	17	Crushed when crossing between cars.
Watchman.....	Hamilton, Ont.....	" 13	79	Struck by train.
Sectionman.....	Bremner, Ont.....	" 20	..	Struck by flat car.
Sectionman.....	Missanabie, Ont.....	" 20	33	Struck by train.
Sectionman.....	Martin, Ont.....	" 20	30	Found near broken velocipede.
Sectionman.....	Vaudreuil, Que.....	" 24	40	Struck by train.
Switchman.....	Trail, B.C.....	" 22	18	Suffocated in ore bin.
Track inspector.....	Dorion, Ont.....	" 24	39	Struck by train.
Brakeman.....	Belleville, Ont.....	" 24	45	Slipped while making coupling.

FATAL INDUSTRIAL ACCIDENTS DURING THE LAST QUARTER OF 1920—Continued.

Trade or Industry.	Locality.	Date.	Age.	Cause of fatality.
STEAM RAILWAYS—Continued.				
Pumpman.....	Lyster, Que.....	Nov. 25	23	Struck by rear end of caboose.
Pullman porter and agent (2).....	York, Ont.....	" 25	55	Derailment.
Brakeman.....	Edmonton, Alta.....	Dec. 3	Over	Run over by engine.
Brakeman.....	Sarnia, Ont.....	" 7	28	Fell between cars.
Brakeman.....	Canfield, Ont.....	" 8	28	Fell from train.
Brakeman.....	Grainger, Alta.....	" 9	21	Fell from running board.
Brakeman.....	Edmonton, Alta.....	" 10	21	Fell in front of engine.
Brakeman.....	Creek des Prairies, Que.....	" 17	Over	Crushed while coupling cars.
Fireman.....	Drumheller, Alta.....	" 3	30	Engine side, "swiped" by train.
Fireman.....	Windsor, Ont.....	" 18	28	Collision; scalded.
Engineer.....	St. Thomas, Ont.....	" 15	Over	Stepped in front of engine.
Engineer.....	Merrickville, Ont.....	" 24	46	Fell from engine.
Conductor.....	Metagami, Ont.....	" 23	43	Collision.
Sectionman.....	Mattawa, Ont.....	" 30	61	Struck by train.
Employee.....	Westmoreland Co., N.B.....	" 11	38	Engine overturned.
Employee.....	Winnipeg, Man.....	" 18	37	Struck by train.
Express messenger.....	Yamaska, Que.....	" 14	23	Derailment.
Car repairer.....	Smith's Falls, Ont.....	" 17	50	Crushed by falling door.
Policeman.....	Halifax, N.S.....	" 27	32	Crushed between box car and shed.
ELECTRIC RAILWAYS—				
Foreman.....	Vancouver, B.C.....	Oct. 16	57	Crushed between cars while fixing trolley.
Brakeman.....	Niagara Falls, Ont.....	Nov. 16	Over	Crushed between engine and car.
NAVIGATION:				
Sailor.....	Godbout, Que.....	Oct. 9	21	Loss of schooner in storm.
Sailor.....	Welland, Ont.....	" 11	19	Crushed between ship and dock.
Barge fireman.....	Quebec, Que.....	" 14	26	Fell between ship and barge, drowned.
Deckhand.....	Lake Huron, Ont.....	Nov. 10	Over	Fell through deck.
Sailor.....	Halifax, N.S.....	" 12	29	Fell when boarding ship.
Fireman.....	Vancouver, B.C.....	" 13	Over	Explosion of oil tanks.
Loaders at barge.....	Quebec, Que.....	" 19	19	Crushed by pulpwood.
Longshoreman.....	Vancouver, B.C.....	Dec. 3	47	Fell into hold of deep tank.
Ship labourer.....	St. John, N.B.....	" 7	64	Fell into hold of steamer.
Coal handler.....	St. John, N.B.....	" 30	Over	Struck by broken boom.
MISCELLANEOUS TRANSPORT—				
Milk dealer.....	Cornwall, Ont.....	Nov. 1	25	Drowned while delivering milk to steamer.
Teamster's helper.....	Calgary, Alta.....	Nov. 9	37	Knocked down by runaway team.
Driver for bakery.....	Galt, Ont.....	Dec. 4	Over	Struck by train.
MINING AND QUARRYING—				
Miner.....	New Waterford, N.S.....	Oct. 2	38	Run over by trip.
Miner.....	Blairmore, Alta.....	" 5	21	Cave-in of coal.
Miner.....	Caledonia Mine, N.S.....	" 11	50	Fall of coal.
Miner.....	Florence, N.S.....	" 22	49	Fall of roof coal.
Miner.....	Florence, N.S.....	" 28	44	Fall of coal.
Miner.....	Middlesboro, B.C.....	" 29	45	Fall of rock from roof.
Miner.....	Sydney Mines, N.S.....	" 6	84	Struck by locomotive.
Coal inspector.....	Creighton Mines, Ont.....	" 6	29	Explosion.
Stoke boss.....	Extension, B.C.....	" 22	31	Fell betwee cars.
Fireboss.....	Levack, Ont.....	" 21	24	Crushed by ck.
Sealer with mining company.....				

FATAL INDUSTRIAL ACCIDENTS DURING THE LAST QUARTER OF 1920—Continued.

Trade or Industry.	Locality.	Date.	Age.	Cause of fatality.
MINING AND QUARRYING—Con.				
Rock grader.....	Three Valley, B.C.....	Oct. 28	32	Struck by rock from blast.
Conductor on coal train.....	Nanaimo, B.C.....	" 12	31	Run over by train.
Driller at mine.....	South Porcupine, Ont.....	" 7	37	Fell off stope.
Driller at gravel pit.....	Calumet, Que.....	" 28	48	Fall of rock.
Worker at quarry.....	St. Vincent de Paul, Que.....	" 4	38	Electrocuted by cable.
Driver at mine.....	Caledonia, N.S.....	Nov. 2	19	Clothing caught in moving trip.
Driver at mine.....	Lethbridge, Alta.....	" 19	21	Collision, and derailment of car.
Miner.....	Coleman, Alta.....	" 4	21	Cave-in of rock.
Miner.....	Morden, B.C.....	" 6	26	Breaking of a stringer caused fall.
Miner.....	Westville, N.S.....	" 10	45	Breaking of haulage rope.
Miner.....	Comox, B.C.....	" 12	32	Fall of rock.
Miner.....	Mountain, Park, Alta.....	Nov. 18	21	Asphyxiation.
Miner.....	Clover Bar, B.C.....	" 19	Struck by coal car.
Labourer at mine.....	Cobalt, Ont.....	" 27	34	While releasing ore was carried down chute—crushed.
Miner's helper.....	South Wellington, B.C.....	" 6	21	Striking head on loose coal.
Car coupler at mine.....	Edmonton, Alta.....	" 19	19	Runaway cars.
Millwright.....	Thetford Mines, Que.....	" 17	26	Clothing caught in moving screen.
Bucker.....	Bellevue, Alta.....	" 18	21	Cave-in of rock.
Foreman at quarry.....	Fort William, Ont.....	" 5	36	Struck by car.
Employee at quarry.....	Merrickville, Ont.....	" 19	18	Fell and run over by car.
Hoistman.....	Sellwood, Ont.....	Nov. 6	Crushed by car.
Logger at mine.....	Premier, B.C.....	" 7	40	Struck by falling tree.
Trapper boy.....	Stellarton, N.S.....	" 10	21	Caught between box and roof.
Electrician and checker (2).....	Thetford Mines, Que.....	" 12	17	Swept into pit by rope of derrick.
Carpenter at mine.....	Levack, Ont.....	" 13	24	Fell off rock.
Pumpman.....	Levack, Ont.....	" 13	20	Crushed by rock.
Driller.....	Thetford Mines, Que.....	" 13	23	Explosion of missed hole.
Labourers (3).....	Robertsonville, Que.....	Dec. 2	22, 25,	Fall of rock.
Mechanic.....	Robertsonville, Que.....	" 2	35	Fall of rock.
Brakeman at mine.....	Asbestos, Que.....	" 6	39	Caught between cars.
Brakeman at mine.....	St. Vincent de Paul, Que.....	" 16	40	Crushed while coupling cars.
Miner.....	Nanaimo, B.C.....	" 3	32	Cave-in of roof.
Miner.....	Big Valley, Alta.....	" 7	21	Over-balanced and fell from tipples.
Miner.....	New Aberdeen, N.S.....	" 15	39	Fall of stone.
Miner.....	Bellevue, Alta.....	" 21	21	Struck by falling top coal.
Fireboss and miner (2).....	Nacmire, Alta.....	" 15	21	Firing of a shot ignited gas.
Helper at mine.....	Timmins, Ont.....	" 23	23	Caught in shafting.
Brusher.....	Glace Bay, N.S.....	" 9	57	Struck by a runaway box
Labourer at mine.....	Levack, Ont.....	" 11	49	Strain
Engineer.....	St. Marc des Carrières, Que.....	" 13	37	Clothing caught in shaft.
Employee at gravel pit.....	Grandview, Man.....	" 2	20	Cave-in.
Employee at gravel pit.....	Manotick, Ont.....	" 29	Explosion.
BUILDING AND CONSTRUCTION—				
Employee on building construction.....	Westmount, Que.....	Oct. 4	51	Fall of elevator.
Employee on building construction.....	Toronto, Ont.....	" 12	Struck by falling timber.
Employee on bridge construction.....	Whitby, Ont.....	" 20	Derrick came in contact with electric wire, electrocuted
Labourer.....	Edmonton, Alta.....	" 5	Fell from bucket down concrete tower.
Punchman.....	N. Vancouver, B.C.....	" 11	26	Struck by falling beam.
Watchman.....	Toronto, Ont.....	" 26	46	Drowned.
Carpenter.....	St. John, N.B.....	" 10	58	Fell from ladder.
Carpeneter.....	Long Branch, Ont.....	Nov. 3	Striking against beam caused fall from ladder.
Carpenter.....	Cassidy, B.C.....	" 18	59	Jack buckled and structure gave way.
Carpenter.....	Herbert, Sask.....	" 18	Plank broke causing fall.
Repairman.....	Montreal, Que.....	" 10	45	Fell from scaffold.

FATAL INDUSTRIAL ACCIDENTS DURING THE LAST QUARTER OF 1920—Continued.

Trade or Industry.	Locality.	Date.	Age.	Cause of fatality.
BUILDING AND CONSTRUCTION—Con.				
Roofer.....	St. Thomas, Ont.....	Nov. 11	31	Fell from scaffold.
Bricklayer.....	New Toronto, Ont.....	" 3	35	Fell down step.
Pile driver.....	Campbell River, B.C.....	" 3	30	Struck by pile driving lead.
Workman with contractor.....	Hamilton, Ont.....	" 8	Struck by pole falling from load.
Building contractor.....	Prince Albert, Sask.....	" 10	Knocked from roof by electric wire.
Labourer with contractor.....	Walkerville, Ont.....	" 20	27	Fell from truck.
Labourer at hydro construction.....	Stamford, Ont.....	" 23	29	Buried under load of earth.
Brakeman.....	Deek's Quarry, Ont.....	" 10	Fell under engine.
Bridgeman.....	Cowichan Crossing, B.C.....	" 16	47	Derrick capsized.
Carpenter.....	Moose Jaw, Sask.....	Dec. 1	40	Fell from scaffold.
Carpenter.....	Medicine Hat, Alta.....	" 15	21	Slipped and fell from bridge while detaching timbers with crowbar.
Carpenter.....	Port Arthur, Ont.....	" 20	23	Fell from cupola.
Labourer.....	Iroquois Falls, Ont.....	" 6	Struck by falling steel.
Driver.....	Twin Falls, Ont.....	" 11	27	Drowned.
Foreman at hydro construction.....	Niagara Falls, Ont.....	" 6	Collision of truck and automobile at curve.
Employee at hydro construction.....	Niagara Falls, Ont.....	" 10	Fell from trestle.
Employee at hydro construction.....	Niagara Falls, Ont.....	" 17	Fell from trestle.
LUMBERING—				
Pondman.....	Fernie, B.C.....	Oct. 9	25	Drowned.
Logger.....	Stillwater, B.C.....	" 12	26	Struck by swinging log.
Barker.....	Wellboro Channel, B.C.....	" 12	31	Struck by falling tree.
Labourer.....	Hamilton, Ont.....	" 13	Fell off car.
Labourer.....	Pembroke, Ont.....	" 22	79	Crushed by machine.
Labourer.....	Sheppard Siding, Ont.....	" 27	46	Struck on head by tree.
Woodsmen.....	York Co., N.B.....	" 14	63	Fell from wagon.
Millwright.....	Blackstone, Ont.....	" 14	32	Scalded hand; infection.
Chokerman.....	Quatsino, B.C.....	" 15	31	Pinned under swinging log.
River driver.....	La Tuque, Que.....	" 18	45	Drowned while breaking a log jam.
Bushman.....	Dean Lake, Ont.....	" 22	16	Drowned.
Fireman on logging train.....	Port Moody, B.C.....	" 26	Train jumped a trestle over a gulley.
Rigging slinger.....	Menzies Bay, B.C.....	" 28	38	Caught by swinging log.
Workman.....	Coe Hill, Ont.....	Nov. 3	52	Bursting of pulley.
Workman.....	Poplar Island, B.C.....	" 3	25	Timber slipped, fractured skull.
Workman.....	Barrows, Man.....	" 15	Struck by falling tree.
Workman.....	Ca-aville, Que.....	" 30	43	Crushed by falling tree.
Workman.....	Vancouver, B.C.....	" 17	Caught in shafting.
Millwright.....	Kippewa, Que.....	" 9	Drowned.
Clerk.....	Gogama, Ont.....	" 16	27	Drowned.
Feller.....	Knox Bay, B.C.....	" 16	46	Struck by slab.
Teamster.....	Durham Bridge, N.B.....	" 16	15	Horses became unmanageable—thrown.
Logger.....	Abbotsford, B.C.....	" 18	44	Falling tree struck stub which flew up.
Logger.....	Hardwich Island, B.C.....	" 20	26	Old tree on ground flew up when struck by falling tree.
Sawyer.....	Millbridge, Ont.....	" 26	30	Struck by tree.
Logger.....	Call Creek, B.C.....	Dec. 1	35	Haulback line struck sapling causing it to strike workman.
Engineer.....	Reid Bay, B.C.....	" 8	27	Charge in stump exploded.
Shingle/bolt cutter.....	Robert Creek, B.C.....	" 8	50	Struck by falling tree.
Woodsmen.....	Sevogle River, N.B.....	" 7	Struck by falling limb.
Workman.....	Chapleau, Ont.....	" 11	Struck by tree.
Workman.....	Port Arthur, Ont.....	" 15	Struck by falling tree.
Workman.....	Lawrencetown, N.S.....	" 28	Caught under falling tree.
Workman.....	La Tuque, Que.....	" 13	19	Struck by limb.
Tie-maker.....	Jasper, Alberta.....	" 24	Struck by falling tree.
Swamper.....	Golden, B.C.....	" 28	60	Struck by falling tree.
PUBLIC UTILITIES—				
Workman with telephone company.....	Toronto, Ont.....	Oct. 19	Fell from pole.
Power house attendant.....	Sydney, N.S.....	" 31	37	Electrocuted while wiping switches.

FATAL INDUSTRIAL ACCIDENTS DURING THE LAST QUARTER OF 1920—*Continued.*

Trade or Industry.	Locality.	Date.	Age.	Cause of fatality.
PUBLIC UTILITIES—Continued.				
Electrician.....	Calgary, Alta.....	Oct. 31	Over 21	Electrocuted while replacing street lamp.
Lineman.....	Moncton, N.B.....	Nov. 8	Struck by train.
Car cleaner with power commission.	Hamilton, Ont.....	" 10	57	Fell, striking head.
Employee of gas plant.....	Ville St. Pierre, Que.....	Dec. 5	42	Burned and asphyxiated; fell through opening to compressor.
PUBLIC AND MUNICIPAL EMPLOYMENT—				
Postal clerk.....	Calgary, Alta.....	Oct. 3	Over 21	Killed by elevator.
Kitchen worker.....	Guelph, Ont.....	" 9	Fall—broken leg.
Street cleaner.....	Montreal, Que.....	" 11	45	Struck by automobile.
Waterworks employee.....	Calgary, Alta.....	Nov. 8	45	Walls of ditch caved in.
Constable.....	Victoria, B.C.....	" 11	33	Collision between car and motor cycle.
Fireman.....	Vancouver, B.C.....	" 13	33	Overcome by fumes.
Helper on sprinkler.....	Montreal, Que.....	" 19	48	Collision of sprinkler and street car.
AGRICULTURE:—				
Thresher.....	St. Benoit Labre, Que....	Oct. 12	Clothing caught in wheels of machine.
Farmer.....	Saanich, B.C.....	" 24	Fell while removing top of silo.
Farmer.....	Big Bay, Alta.....	" 23	Caught in separator belt.
Farm hand.....	Agincourt, Ont.....	" 26	Fell from wagon.
Farmer.....	Beauport, Que.....	Nov. 3	49	Horses ran away.
Farmer.....	Ste. Anne de Beaupré, Que.....	" 11	57	Fire; burned in trying to save stock.
Farmer.....	Perth, N.B.....	" 23	Steer slipped and fell on man.
Farmer.....	Ayr, Ont.....	Dec. 6	Tractor overturned.
Farmer.....	Sparta, Ont.....	" 15	Crushed by tractor.
Farmer.....	Richmond Hill, Ont.....	" 17	Rope broke; struck by double-tree.
FISHING AND HUNTING—				
Fisherman.....	Lunenburg, N.S.....	Nov. 3	30	Drowned.
Fishermen, (2).....	Salmon Point, Ont.....	" 9	Drowned.
MISCELLANEOUS TRADES—				
Labourer.....	Otter, B.C.....	Oct. 1	31	Drowned.
Labourer.....	Port Mann, B.C.....	" 3	27	Struck by falling rock.
Labourer.....	Dartmouth, N.S.....	" 13	31	Struck by dinky engine.
Labourer.....	Hutton, B.C.....	" 27	Fell from elevation.
Labourer.....	Port Neville, B.C.....	" 23	35	Falling boom stick.
Labourer.....	Montreal, Que.....	" 27	Struck by clam bucket.
Labourer with coal company.....	Port Arthur, Ont.....	" 23	36	Fell into bin.
Labourer with manufacturing company.....	Brantford, Ont.....	" 8	Burned.
Millwright.....	Vancouver, B.C.....	" 7	40	Drawn into machinery while phasing belt on pulley.
Millwright.....	Halifax, N.S.....	" 14	20	Head caught under descending piston.
Mover of building.....	Dickinson's Landing, Ont.....	" 15	62	Electrocuted.
Elevator employee.....	Winnipeg, Man.....	" 16	Caught between cage and shaft.
Elevator repairman.....	Windsor, Ont.....	" 27	Electrocuted.
Employee.....	Revelstoke, B.C.....	" 28	Blast.
Employee with supply company.....	Toronto, Ont.....	" 30	58	Fell from truck.
Watchman.....	Winnipeg, Man.....	" 30	36	Fell down elevator shaft.
Electrician.....	Montreal, Que.....	Nov. 10	53	Electrocuted.
Operator at manufacturing plant.....	Toronto, Ont.....	" 13	16	Crushed by elevator.
Hospital employee.....	Ottawa, Ont.....	" 5	62	Scalded in boiler room.

FATAL INDUSTRIAL ACCIDENTS DURING THE LAST QUARTER OF 1920—*Concluded.*

Trade or Industry.	Locality.	Date.	Age.	Cause of fatality.
MISCELLANEOUS TRADES—<i>Con.</i>				
General foreman.....	Prince Rupert, B.C.....	Nov. 12	31	Fell from moving train.
Millman.....	Allenby, B.C.....	" 25	30	Fell into feed box in tube mill.
Labourer.....	Vancouver, B.C.....	" 13	40	Crushed between roller case and cant.
Labourer.....	Comox, B. C.....	" 28	30	Crushed under car.
Millwright's helper.....	Swanson Bay, B.C.....	Dec. 1	48	Slipped and fell into pulley.
Foreman.....	Ruby Creek, B.C.....	" 2	45	Crushed in attempt to crawl under moving train.
Blacksmith's employee.....	Montreal, Que.....	" 21	58	Fell from ladder.
Workman at elevator.....	Port Arthur, Ont.....	" 20	Fell from elevation.
Electrical inspector.....	Vancouver, B.C.....	" 6	50	Struck by automobile.
Labourers (2).....	Fort Coulonge, Que.....	" 6	66, 35	Explosion of boiler.
Labourer.....	Mileage 71, B.C.....	" 8	47	Jumped from gas car at approach of train.
Labourer.....	Montreal, Que.....	" 9	51	Caught in line shaft.
Labourer.....	St. Jean L. Evangelist, Que.....	" 31	44	Struck by wood from saw.
Night stableman.....	Saskatoon, Sask.....	" 22	38	Explosion when lighting fire with coal oil.
Cattle buyer.....	Brockville, Ont.....	" 31	Struck by train in yard.

SUPPLEMENTARY STATEMENT OF FATAL INDUSTRIAL ACCIDENTS IN 1920 NOT PREVIOUSLY REPORTED.

Trade or Industry.	Locality.	Date.	Age.	Cause of fatality.
Bridgeman.....	Canora, Sask.....	Jan. 1	41	Crushed between caboose and car.
Constable.....	Britannia Beach, B.C....	Feb. 20	37	Exposure.
Employee at paper factory.....	Thorold, Ont.....	Mar. 15	Struck by falling log.
Municipal workman.....	Dunnville, Ont.....	July 14	15	Caught in water wheel.
Labourer with contractor.....	Welland, Ont.....	" 20	54	Struck by falling block (Died Nov. 11.)
Logger.....	Deep Creek, B.C.....	" 27	35	Struck by falling branch.
Sawyer with iron company.....	Toronto, Ont.....	Aug. 5	64	Struck by flying block.
Quarryman.....	Westmoreland Co., N.B.	" 5	37	Struck by stone from quarry head.
Fire fighter.....	Win Cache, B.C.....	" 16	Burned in forest fire.
Miner.....	Stewart, B.C.....	" 29	Struck by piece from blast.
Teamster with municipal corporation.....	London, Ont.....	Sept. 7	77	Struck by excavator shovel.
Conductor with railway company.....	Hamilton, Ont.....	" 7	62	Fell under train.
Labourer.....	Fraser Mills, B.C.....	" 13	50	Struck by box car.
Cabinet worker.....	Guelph, Ont.....	" 27	53	Struck knee on wheel.
Labourer with dredging company.....	Port Weller, Ont.....	" 27	30	Drowned.
Blacksmith with lumber company.....	Esher, Ont.....	" 7	51	Dynamite explosion.
Labourer with lumber company.....	Esher, Ont.....	" 7	64	Explosion.
Woodsman.....	Restigouche Co., N.B.	" 13	21	Fell from horse.
Logger.....	Ramsay Arm, B.C.....	Sept. 18	19	Struck by strap of bull block which slipped from stump.
Logger.....	Bella Bella, B.C.....	" 22	Drowned.
River driver.....	St. John, N.B.....	" 30	Fell from rail of steamer.

MIGRATION AND SETTLEMENT DURING THE LAST QUARTER OF 1920

IMMIGRATION.—The following statements compiled from information furnished by the Department of immigration and Colonization give details as to the total Immigration into Canada during the last quarter of 1920. For purposes of comparison the figures for the previous quarter and for the corresponding quarter in 1919 are also given:

STATEMENT OF IMMIGRATION TO CANADA DURING THE LAST QUARTER OF 1920.

	British	From U.S.A.	Other countries	Totals
1920				
October	7,602	3,945	3,305	14,852
November	4,695	3,262	2,890	10,847
December	1,968	2,110	3,105	7,183
	14,265	9,317	9,300	32,882
Third quarter, 1920	24,281	14,366	7,116	45,763
Last quarter, 1919	17,232	8,990	2,565	28,787

The table on page 264 gives the nationality, sex and destination of all immigrants entering Canada during the last quarter of 1920.

HOMESTEAD ENTRIES.—During the last quarter of 1920 there were 1,310 homestead entries recorded in the Provinces of Manitoba, Saskatchewan, Alberta and British Columbia, as compared with 1,698 for the third quarter of 1920, and 1,328 for the corresponding quarter of 1919. The statement opposite shows the number and nationality of those who took up homesteads in the various provinces during the last quarter of 1920.

HOMESTEAD ENTRIES BY PROVINCES AND NATIONALITY OF HOMESTEADERS DURING LAST QUARTER OF 1920.

Nationality.	Manitoba.	Saskatchewan.	Alberta.	British Columbia.	Total, 3 months
Canadians from Ontario	26	71	72	3	172

RECENT LEGAL DECISIONS AFFECTING LABOUR

International Executive of Union enjoined from interfering with contractual relations and from revoking charter of a local union

FOLLOWING a legal action* which restored the Charter of Local No. 213 of the International Brotherhood of Electrical Workers after it had been revoked by the International Brotherhood Executive, the International officials attempted to compel the two locals in Vancouver, Nos. 213 and 310, to amalgamate. This attempt, however, was not successful, and subsequently Local No. 310 negotiated an agreement with the British Columbia Telephone Company. The International Executive then took steps to revoke the Charter of Local 310 for entering into what was considered a discriminatory agreement with the Company, shutting out from employment members of Local 213. The B. C. Telephone Company thereupon brought an action against officers of Local 213 alleging that they had threatened to declare the Company "unfair", and also an action against the International officers on the ground that the revocation of the Charter of Local 310 had the effect of terminating its agreement with the Company and thereby preventing performance of terms in the agreement. The Company sought permanent injunctions in both cases.

With regard to the Company's allegations that Local 213 threatened to declare it "unfair" it was found by the Court that this charge was not supported by evidence, and the injunction sought against the local union was therefore refused. With regard to the charge against the International officers it was held by the Court that the Brotherhood or its officers had no legal right to interfere with the contractual relations existing, nor could they lawfully revoke the Charter of Local No. 310 which had been attempted upon its entering into what was considered a discriminatory agreement with the Company, shutting out from employment members of Local 213. The Court found that the agreement had been negotiated with the sanction of the international president and held that having endorsed the agreement, the International Executive could not afterwards be allowed to interfere. An injunction was therefore granted against such interference. (*British Columbia—B. C. Telephone Company vs. I. B. E. W. Local 213, et al., B. C. Telephone Company vs. Noonan, et al.*)

*See LABOUR GAZETTE, April 1920, page 494.

A workman hired in Ontario and injured when at work in Quebec, may bring action under Quebec law

A workman who had been engaged at Ottawa, Ont., for employment in a lumber camp in Quebec, was struck by a piece of wood when at work, which

caused the loss of an eye. He brought an action against his employers in the District of Pontiac, where the accident occurred, under the Quebec Workmen's

Compensation Act, claiming an annuity of \$241.87, or a capital sum of \$1,880.92. His employers contested the action on two grounds; first, that the contract of hire having been made in Ontario, the relations between the parties were governed by the laws of that province; and, secondly, that the plaintiff had waived his right to the action by applying to the Board of Compensation of Ontario for satisfaction of his claim. With regard to the first objection it was pointed out by the Court that while in general the parties to a contract might fairly be presumed to have had in view the customs of the place where they entered into the contract, this being especially the case where the performance of the contract was to take place there, this presumption ceased to exist when the contract was to be executed in another

place. In such an instance the parties were presumed to have intended to submit themselves to the laws of that place. With regard to the second objection the Court held that it had not been satisfactorily substantiated, it having been shown only that the plaintiff caused his attorney to write to the Board of Compensation in regard to his claim, but the terms of the letter were not in evidence, and it did not appear that the plaintiff had abandoned thereby the right to apply to the courts of Quebec.

The Court therefore maintained that the plaintiff's claim came within the scope of the Quebec Act, and found that the plaintiff was entitled to a sum of \$1,864.13. Judgment was accordingly given for plaintiff for this amount with interest and costs. (*Quebec—Girard vs. Gillies Brothers, Limited.*)

An employee injured in Ontario when residing there cannot bring action in Saskatchewan, as Ontario Compensation Board has exclusive jurisdiction

A locomotive fireman was injured in a railway accident in the Province of Ontario where he was then living. The accident was caused by the negligence of a fellow employee. He brought an action against his employer in the Court of King's Bench of Saskatchewan where he had subsequently taken up his residence, and a jury fixed his damages at \$10,700. The defendant Company claimed that he had no right of action in the Saskatchewan Courts as the law of Ontario provided exclusive jurisdiction over the matter in question. The Court upheld the claim of the defendant as

being in accordance with various decisions in other similar cases based on the principles of private international law, and the decision rendered was as follows: "Because the plaintiff was domiciled in Ontario at the time of the accident and the Ontario statute gives the Board under the Workmen's Compensation Act exclusive jurisdiction in the matter in question, it is of the opinion that the defendant's contention must prevail, therefore the plaintiff's action is dismissed with costs." (*Saskatchewan—McMillan vs. Canadian Northern Railway Company.*)

United States Supreme Court declares Secondary Boycotts unlawful

An important decision has recently been rendered by the Supreme Court of the United States, with three judges dissenting, declaring unlawful the ordering of sympathetic strikes by a labour organization, and the adoption of means to prevent the sale of the products of a company with which it had a dispute. The facts of the case were as follows:

In August, 1913, the International Association of Machinists called a strike at the factory of the Duplex Printing Press Company of Battle Creek, Mich., as a result of which about 11 mechanics out of 200 in the factory and 3 who supervised the erection of presses in the field went out. This did not materially affect the operations of the company, and sales and shipments in interstate commerce continued. As part of a country-wide programme of the International Association, the Machinists' Union of New York City took certain action to force prospective customers to refrain from purchasing the company's goods. This is known as a secondary boycott.

The company brought a suit in the District Court for the Southern District of New York, applying for an injunction to restrain the International Association of Machinists from maintaining a boycott against the products of its factory in furtherance of a conspiracy to injure and destroy its will, trade and business, especially to obstruct and destroy its interstate trade. The acts of the Association complained of included warning customers not to purchase presses made by the complainant under threat of causing loss to them and sympathetic strikes; notifying

a trucking company not to haul the presses; notifying repair shops not to repair Duplex presses; threatening union men with the loss of their union cards if they insisted on installing the presses. The District Court dismissed the complaint, and its judgment was upheld by the Circuit Court of Appeal.

The case was then appealed to the United States Supreme Court. The majority of the Court held that the complainant's business of manufacturing printing presses and disposing of them was a property right entitled to protection against unlawful injury or interference; that unrestrained access to the channels of interstate commerce was necessary for the successful conduct of the business; that a wide-spread combination existed, to which the defendants and the Association represented by them were parties, to hinder and obstruct the complainant's interstate trade and commerce, and that as a result of it the complainant had sustained substantial damage to its interstate trade. Hence the right to an injunction was clear, if the threatened loss was due to a violation of the Sherman Act as amended by the Clayton Act. The former Act declared illegal "every contract, combination in the form of trust or otherwise, or conspiracy in restraint of trade or commerce among the several states or with foreign nations." The Court declared that "the accepted definition of a conspiracy is a combination of two or more persons by concerted action to accomplish a criminal or unlawful purpose or to accomplish some purpose not in itself criminal or unlawful by criminal or unlawful means." The law only places a restriction upon the use of the in

junction when acts are committed by parties concerned in "a dispute concerning terms or conditions of employment." It was held that it would do violence to the guarded language employed were the exemption extended beyond the parties affected in a proximate and substantial, not merely a sentimental or sympathetic sense, by the cause of dispute. "There is nothing here to justify defendants or the organizations they represent in using either threats or persuasion to bring about strikes or a cessation of work on the part of employees of complainant's customers or prospective customers, or of the trucking company employed by the customers, with the object of compelling such customers to withdraw or refrain from commer-

cial relations with complainant, and of thereby constraining complainant to yield the matter in dispute. To instigate a sympathetic strike in aid of a secondary boycott cannot be deemed 'peaceful and lawful' persuasion. In essence it is a threat to inflict damage upon the immediate employer, between whom and his employees no dispute exists, in order to bring him against his will into a concerted plan to inflict damage upon another employer who is in dispute with his employees."

The decree of the lower court was reversed and the cause remanded to the District Court for further proceedings in conformity with this opinion. (*United States—Duplex Printing Company vs. Deering et al.*)

Joint Councils in Industry

IN view of the increasing desire on the part of both employers and employees for information in connection with plans for securing a permanent improvement in the relations of employers and workers, the following notes have been compiled on the principles and practices governing Industrial Councils and Works Committees in Canada, Great Britain and the United States:

CANADA.

It will be recalled that in April 1919, a Royal Commission known as the Royal Commission on Industrial Relations, was appointed by the Dominion Government "to consider and make suggestions for securing a permanent improvement in the relations between employers and employees" and "to recommend means for insuring that industrial conditions affecting relations between employers and employees shall be reviewed from time to time by those concerned, with a view to improving conditions in the future." In order to secure the necessary basis for recommendations along these lines, the Commission was authorized to "obtain information as to the character and extent of organization already existing among bodies of employers and employees respectively" and to "investigate available data as to the progress made by established Joint Industrial Councils in Canada, Great Britain and the United States." The Commission on Industrial Relations, itself a body representing the public, employers and employed, held sessions in all the large industrial centres from the Pacific to the Atlantic and considered the proposals and views of any persons or associations who cared to appear before it. In the report submitted by the Commission, it was stated: "There is urgent necessity for greater co-operation between employer and employed. The great obstacle to such co-operation is the suspicion and distrust with which in many cases each regards the other." A recommendation was made in favour of the formation of Joint Industrial Councils and Works Committees; the Commission also advised "that the Government should interest itself in the development of these councils and that a bureau should be established under the Minister of Labour which would compile all available statistics on this subject, undertake publication of developments in this and other countries, maintain officers who would be available to give assistance and act as liaison officers between employer and workers where desire is expressed to create such Councils, and render such other assistance as may be required." The report states, however, that the commissioners "are under no illusions as to industrial councils constituting a universal panacea for all industrial troubles. Their usefulness will depend upon the spirit in which they are adopted."

In accordance with a recommendation of the Royal Commission on Industrial Relations, a National Industrial Conference was held at Ottawa in September 1919, of representatives of employers and employees and of the public; the subject of Joint Industrial Councils and Works Committees was discussed, a reso-

Royal
Commission on
Industrial
Relations.

National
Industrial
Conference.

lution being unanimously adopted approving the formation of Joint Industrial Councils as a means of furthering greater co-operation between employer and employees.

Plans in Operation

Objects

Among the plans which have been put into effect in Canada, with the object of giving some voice in management to employees, there are many modifications and variations as to methods, and although the principles involved differ but slightly, it is observed that the objects of the different joint industrial councils and committees reported to the Department are, generally speaking (1) to provide means whereby on the one hand employees may crystallize their thoughts, and present their views to the management, with respect to wages and working conditions, and on the other hand to provide the management with a means whereby it may better know the preferences and appreciate the points of view of the workers; (2) to provide means for exchanging ideas and suggestions and to develop further a spirit of co-operation; in short, to secure the largest possible measure of joint action between employer and employee in any matters pertaining to their common welfare. Some committees are charged with the administration of trust funds and sickness benefits; others again deal with questions of policy relating to wages, hours, employment, working conditions, work practice, safety, sanitation and health. The number of employees coming within the scope of joint councils and committees, as at July 1920, is reported as approximately 145,000.

Basis of Representation.

The basis of employee representation on joint committees in Canada varies between one representative for each ten workers, and one representative for each hundred workers, but the average seems to be about one representative for each thirty employees. In most cases the employee representatives are nominated and elected by secret ballot, and in practically all cases an equal number of representatives of the management are appointed by the management. In some cases, provision is made for a chairman appointed by the management; in others, the chairman is appointed by the full board. Similarly the secretary is sometimes appointed by the management, and in other cases two secretaries are appointed, one by the management and one by the employees. A plan which appears to be distinctly approved, is to have the director of personnel, the supervisor of welfare, or the employment manager, act as secretary of the committee. In some plants where women are employed, provision is made for a special representative elected by the women only; but in most cases the representatives are elected by various groups, such groups being arranged either for geographical convenience, or by crafts within the plant. One large company has a permanent secretary paid by the employer.

It is generally provided in the various constitutions that the plan of representation of employees shall in no way abridge or conflict with the right of employees to membership in any labour or or other lawful organization.

Qualifications of Representatives.

In most cases, employees must have one year or more continuous service with the company and be at least 21 years of age to

become eligible for election as an employees' representative. An exception is made in the case of women representatives for whom in certain cases the minimum age is 18 years. As a rule, no foreman nor any official having definite authority to hire or discharge is allowed to represent the employees. Most regulations specify that it is necessary for an employee representative to be a Canadian citizen or of British birth, but in one case an employee is eligible if he has his first papers, and in another, United States citizens are eligible.

Meetings of the councils or committees are as a rule held once a month, but provision is generally made for special meetings to be called when necessary. In some cases the council meetings are held during the employer's time, but there are cases where meetings are after working hours. Generally, meetings are held on the premises of the company.

Meetings

In some cases, the constitution of the joint industrial council provides for standing committees to deal with such matters as health, safety, sanitation, recreation, libraries, athletics, restaurants, ambulances, and entertainments, but in the majority of cases, sub-committees are formed to deal with these and other specific matters, disbanding when their report is made to the council.

Standing
Committees

The constitutions of several joint industrial councils provide that matters which cannot be adjusted between individual employees and their foremen may be submitted to a shop committee, and failing a mutually satisfactory arrangement, may be referred to a general council and thereafter in the absence of a suitable agreement, to arbitration, the decision of the arbitrators to be binding. In some cases, however, no procedure as to arbitration has been thought necessary, the decision of the chief executive officer being final. In practically all cases, provision is made for fullest investigation, and from the information to hand, it would appear that it is very seldom that matters cannot be satisfactorily handled by the shop or plant committees or councils.

Procedure.

As a rule, minutes of the council and committee meetings are kept and means provided for publishing them in order to inform employees as to matters under discussion and as to decisions made. In some cases, the minutes are published in the house-organ or plant newspaper. In other cases, the minutes are kept in the office of the secretary, available for inspection at any time.

Minutes.

The subjects dealt with by the joint committees include absenteeism, ambulance work, apprentice regulations, athletics, benefits, bonuses, buildings, canteens, church work, comfort, co-operative stores, education, employment, equipment, gardens, group insurance, health, holidays, hours, materials, methods, organization, piece rates, production, promotion, publicity, quality of production, recreation, rules, safety, salvage, sanitation, thrift, Victory Bonds, wages, working conditions, and many other matters.

Matters
Dealt With.

The results of the operation of these joint committees or councils in industry have been commented on very favourably by employers, as the following reports from some of the larger firms in this country, which have put into operation extensive plans for industrial organization with employee representation, will show:—

Results.

The Bell Telephone Co. of Canada, Ltd. report improvement in service rendered, due to keener interest shown by employees in work and closer co-operation with Company officials. The formation of plant councils throughout this Company and the joint meetings between the representatives of employees with the management are said to have been greatly beneficial to both parties. One of the largest rubber manufacturers, operating several factories, states that the general impression among the managers is that headway has been made in the matter of volume and quality of production and that there has resulted a noticeably beneficial effect on labour relations in general between management and employees, great advance having been shown in the willingness of employees to co-operate and be fair in the settlement of all questions: *The Gray-Dort Motors, Ltd.*, state that results of the councils have been surprisingly beneficial; *The Gutta Percha and Rubber Ltd.*, state that there has been a favourable reaction in regard to the matter of labour turnover and distinctly feel that the relationship between management and employees has improved as a result of the council meetings: the president of the Employees' Committee of the Works Council states that the Joint Council has established harmony in all relations between the management and the working force of the Company; *Imperial Oil Ltd.*, state that a spirit of mutual respect and a better disposition to appeal to the sense of fairness are becoming apparent; *International Harvester Co., of Canada Ltd.*, state that labour relations in general are unquestionably better; *Kerr Lake Mining Co., Ltd.*, are thoroughly convinced that joint discussions are of material benefit not only to the men, but also to the interest of the Company; *The Manitoba Bridge & Iron Works Ltd.* state that their labour turnover has been reduced 50 per cent. since a council was started, although they do not claim that this has resulted altogether from the institution of the council; *Massey Harris Co., Ltd.*, state that the councils have more than justified themselves and representative employees express the opinion that "works councils remove all grounds for dissatisfaction, suspicion and discontent;" *Robb Engineering Works, Ltd.*, look upon the committee arrangement as having proved very satisfactory from all view-points; *The Spanish River Pulp & Paper Mills, Ltd.*, have been making a very close study of the matter of joint committees, believing that committees would be good for the employees as well as for the company.

Saskatchewan
Civil
Service
Joint
Council

In the spring of 1920 there was organized the Saskatchewan Civil Service Joint Council. The Council, representing the Government and Civil Service employees, is composed of three deputy ministers and three members of the Saskatchewan Civil Service Association. The Council may appoint such committees as may from time to time be deemed advisable and may call officials or employees before it to give information regarding any matter under consideration. Recommendations of the Council are referred to the deputy head of the department concerned and to the Civil Service Commissioner. Matters dealt with include complaints as to salaries, allocation of work, holidays, sick-leave, the operation of the staff dining-room and similar matters.

In the month of August 1918, a joint board known as the Canadian Railway Board of Adjustment No. 1, was formed by agreement between the railways of Canada and six of the railway employees' brotherhoods "to avoid disputes or misunderstandings which would tend to lessen the efficiency of transportation service in Canada during the war." It was further agreed that this arrangement should continue in effect after the war, unless either of the parties desired to terminate it. The operations of the Board during the war proved to be so effective that the arrangement was continued by mutual agreement and is still in effect.

Canadian
Railway
Board of
Adjustment
No. 1.

The Board consists of twelve members, half selected by the railways and half by the executive officers of the respective railway brotherhoods concerned, namely:—Brotherhood of Locomotive Engineers, Brotherhood of Locomotive Firemen and Enginemen, Order of Railway Conductors, Brotherhood of Railroad Trainmen, Order of Railroad Telegraphers and International Brotherhood of Maintenance of Way Employees.

All office expenses in connection with the Board of Adjustment are borne equally by the Railway Association of Canada and the organizations of employees.

The Board meets regularly at stated times each month and continues in session until all matters before it are considered.

Personal grievances or controversies on Canadian railways, arising out of interpretations of wage agreements are handled by a general committee of employees up to and including the chief operating officer of the railway concerned. If an agreement is not reached, the chairman of the joint committee of employees may refer the matter to the executive officer of the organization concerned, and if the contention of the employees' committee is approved, the matter is referred to the Canadian Railway Board of Adjustment No. 1, whose decision is binding. All decisions of the Board must be approved by majority vote of all members of the Board. So far it is understood that decisions of the Board have in all cases been made unanimous.*

A joint body known as the National Joint Conference Board of the Building and Construction Industries of Canada, was organized in 1920 to furnish a common meeting ground for the discussion of questions affecting employers and employees in the building and construction industries. It is composed of five representatives selected by the Association of Canadian Building and Construction Industries, and five members selected by the representatives of the international trade unions in the building trades. In connection with this National Board, there are local boards which deal with disputes and agreements in the building and construction industries; such

National
Joint
Conference
Board of the
Building and
Construction
Industries.

*Results of each of the 87 cases dealt with by the joint board between August 7, 1918 and August 31, 1920, are tabulated in the Report of the Proceedings of the Canadian Railway Board of Adjustment No. 1, published by the Department of Labour, in the LABOUR GAZETTE, November, 1920.

boards or councils are already functioning at Ottawa, Toronto, London and Hamilton, and their operations have accomplished much in harmonizing and standardizing conditions of contracting and of employment, and have secured a great measure of joint action between employers and employees for the development of these industries as a part of the national life, and for the improvement of the conditions of all engaged therein.

The Ottawa local joint board consists of ten members, with power to add to the number, five being representatives of the Building Trades Council of Ottawa, and five being from the Ottawa Branch of the Association of Canadian Building and Construction Industries.

The Toronto local joint board consists of ten members with power to add to the number, two representatives being from the Builders' Exchange, one from the Ontario Association of Electrical Contractors and Dealers, one from the Toronto Society of Domestic, Sanitary and Heating Engineers, one from the International Master Painters' Association, and five from the Building Trades League.

The London local joint board is similar in constitution to those of Ottawa and Toronto.

The Hamilton local joint board consists of ten members, five appointed by and representing the employers engaged in the building industry, and five appointed by the Building Trades Council representing the employees.

Meetings of the local boards are held as often as necessary, regular meetings being held once a month. Matters which have been dealt with include grievances of employees' unions and of employers, apprentice systems, jurisdictional disputes, agreements, etc., and the work of the boards has proven very valuable both to employers and employees, having been the means of averting many strikes and of exercising in every way a beneficial effect on labour relations in general between the building trades employers and their employees.

Joint Action
in the
Men's
Clothing
Industry.

A system of joint action has been developed in the men's clothing industry in Canada, based on the system in operation in the plant of Hart, Schaffner and Marx, Chicago. A similar development has taken place in the American clothing markets of Rochester, Baltimore, Boston and New York. In Canada, in the cities of Montreal, Toronto and Hamilton, the Amalgamated Clothing Workers of America have boards representing the workers. These boards are employees' organizations and do not represent the employers. Each board has a manager who acts with the labour manager of the associated clothing manufacturers in the adjustment of disputes. The labour adjustment council, made up of representatives of employers and employees, considers all matters on which the business manager of the union and the general manager fail to agree. If the members of the council do not reach an agreement, the "impartial chairman" makes a recommendation which is binding on both sides. In Toronto, there is an agreement made by the union with the manufacturers.

Among the industries and branches of employment in Canada in which Joint Councils or Committees have already been introduced are the following:—

Abattoirs	Engineering	Industries in which Joint Councils have been introduced
Agricultural Implements	Oil	
Automobiles	Packing	
Bridge and Structural Iron	Railways	
Brush Manufacturing	Rubber	
Building and Construction	Telephones	
Civil Service of Saskatchewan	Woollen Goods.	
Clothing		

In the Province of Manitoba the Industrial Conditions Act of 1919 provided for a "Joint Council of Industry" to consist of five persons, two to be selected as representatives of employers engaged in industry in Manitoba, and two to be selected as representatives of employees connected with industry in Manitoba; the chairman to be an impartial person so far as employers and employees are concerned. Members of the Council hold office during the pleasure of the Lieutenant-Governor-in-Council. The Lieutenant-Governor-in-Council may, upon recommendation of the joint council, appoint persons with technical or special knowledge to assist in respect of any matter which may come before it.

Manitoba
Joint
Council
of Industry

The Council has jurisdiction over businesses or corporations giving rise to the relation of employer and employee, but does not apply to agricultural pursuits or railways operated under the Railway Act of Canada. Council may take the initiative in investigating questions relating to alleged unfair profits caused by maintaining rates of wages which are not fair and reasonable, and may from time to time make investigations as to the cost of living; numbers of persons employed in industry; rates of wages paid and other similar matters. Action may be taken upon complaint of any person or organization, or whenever the Council has reason to believe that an industrial dispute exists or seems likely to arise.

From the date of inception of the Council of Industry for the Province of Manitoba, May, 1920, to January 21, 1921, sixty-nine meetings of the Council were held and eighty interviews with parties interested in cases dealt with. The findings of the Council were announced in thirteen cases of industrial disputes; in five cases, both parties agreed to abide by the decision of the Council before the decision was announced; in one case, some of the recommendations were not adopted; in another case, the finding was rejected by the labour union which had referred the matter to the Council; and in all other cases agreements were entered into which are said to be satisfactory to both parties, embodying the suggestions of the Council.

The Council has also conducted investigations in connection with rents, housing, unemployment, apprenticeship and industrial education, cost of living and profit-sharing systems.

Employees' Committees.

In addition to the various joint shop and plant committees concerning which the Department has received information, particulars have been received of many employees' committees, some of these being in connection with employees' clubs or associations, formed for the carrying out of some object of mutual service; as for instance, pension plans, social and athletic purposes. Such a committee may form a valuable nucleus for a joint industrial council.

GREAT BRITAIN.

As a step towards lessening industrial unrest in Great Britain, a Government committee, commonly known as the "Whitley" Committee, after its Chairman, the Rt. Hon. J. H. Whitley, M.P., put forward in 1917 proposals for fostering closer relations between employers and employed.*

The Whitley Committee Plan.

Briefly, the proposal outlined by the Whitley Committee was that employers and employees in their respective national organizations should elect representatives to form a national joint council for each industry. It was further proposed that these national industrial councils should promote the formation of district councils and individual works committees. Outstanding features of the Whitley Committee plan are: (1) the formation of national and district councils and works committees composed in each case of representatives of employers and workmen; (2) the selection of the council members through the employers' and employees' organizations respectively; (3) the provision for regular meetings; (4) the consideration of any proposals submitted for the regularization of production and employment; (5) the encouragement of the study of processes, designs and research; (6) the regular consideration of wages, hours and working conditions generally.

In the conclusion of its first and principal report, the Whitley Committee observed:—

The schemes recommended in this report are intended not merely for the treatment of industrial problems when they become acute, but also, and more especially, to prevent their becoming acute. We believe that regular meetings to discuss industrial questions, apart from and prior to any differences with regard to them that may have begun to cause friction, will materially reduce the number of occasions on which, in the view of either employers or employed, it is necessary to contemplate recourse to a stoppage of work.

We venture to hope that representative men in each industry, with pride in their calling and care for its place as a contributor to the national well-being, will come together in the manner here suggested, and apply themselves to promoting industrial harmony and efficiency and removing the obstacles that have hitherto stood in the way.

Organisation of Employers and Work-people.

The Whitley Committee further stated that it was the considered opinion of the members "that an essential condition of securing a permanent improvement in the relations between employers and employed is that there should be adequate organization on the part of both employers and work-people. The pro-

*The reports of the Whitley Committee and of certain Communications relating thereto have been re-printed by the Department of Labour Canada, and are available for distribution.

posals outlined for joint co-operation throughout the several industries depend for their ultimate success upon there being such organization on both sides; and such organization is necessary also to provide means whereby the arrangements and agreements made for the industry may be effectively carried out."

The recommendations of the first Whitley report were endorsed by the British Government in the following terms: "The Government desires it to be understood that the Councils will be recognized as the official standing consultative committees to the Government on all future questions affecting the industries which they represent and that they will be the normal channel through which the opinion and experience of an industry will be sought on all questions with which the industry is concerned. It will be seen, therefore, that it is intended that Industrial Councils should play a definite and permanent part in the economic life of the country, and that the Government feels that it can rely on both employers and work-people to co-operate in order to make that part a worthy one."

During the period which has elapsed since the publication, in March 1917, of the first report of the Whitley Committee, sixty-six National Joint Industrial Councils have been formed including 3½ million workers in the following industries:—

Name of Industry.	Number of Workers. Jan., 1920.

District councils have also been established in many of the foregoing industries, and works committees have been set up in a large number of individual establishments.

Mining and
Transportation.

In the important industries of mining and transportation, in both of which there has been widespread unrest of late, the plan enunciated in the Whitley Report has not yet been accepted.

Subjects
Dealt With.

National industrial councils have dealt with a wide range of subjects, including wages, hours of labour, holidays, disputes, conciliation, welfare, safety, research, organization, statistics, education, apprenticeship, unemployment insurance, workmen's compensation and merchandise marks.

The Garton
Foundation
Suggestions.

A memorandum on the industrial situation issued under the auspices of the Garton Foundation prior to the publication of the Whitley Committee report is recognized as having been one of the most notable contributions to the development of the new spirit of co-operation. The writers declare: "It is essential to the securing of such co-operation that labour as a party to industry should have a voice in matters directly concerning its special interests, such as rates of pay and conditions of employment. It is necessary to create adequate machinery both for securing united action in the pursuit of common ends and for the equitable adjustment of points which involve competing interests. This machinery must be sufficiently powerful to enable both sides to accept its decisions with confidence, that any agreement arrived at will be generally observed."

*Figures not available.

The operatives in the building industry in Britain prior to the publication of the Whitley Committee report had presented to their employers through their association a statement outlining a plan for the joint control of the building industry and affirming that "industrial peace must come not as a result of the balance of power with a supreme court of appeal in the back-ground; it must arise as the inevitable by-product of mutual confidence, real justice, and constructive goodwill."

The Building
Industry.

Thus the time was ripe in Great Britain for the concrete proposals of the Whitley Committee. The Federation of British Industries, an organization of employers representing over 9,000 firms in every trade and industry and employing between three and four million workers and over \$2,000,000,000 capital, announced "We are strongly of the opinion that the workers in every industry should be given the fullest possible voice in the determination of the conditions under which they are employed, provided this does not encroach upon the operations of the commercial management or lessen the proper authority of the foreman. . . . These recommendations of the Whitley Committee have repeatedly been approved by the Federation and we desire once more to state in emphatic terms our approval of them and especially of the proposals for district councils. The recommendations of the Whitley Committee, if properly carried out, will give the worker a new and honourable status. In the national council of the industry and in the joint industrial council, his representative will sit on an absolute equality with the employer's and will have an equal voice in determining the general conditions subject to which industry is carried on. . . . We believe, also, that in industries where circumstances permit of their formation, works Committees will do much to make the worker realize that he is acquiring a new status in industry."

Approval of
the Federation
of British
Industries.

A Government Commission on Industrial Unrest, reporting about the same time as the Whitley Committee, approved the principle of the latter's report, the commissioners for the north-west area affirming it to be "a statesmanlike proposal of the best method of dealing with unrest."

The
Commission
on
Industrial
Unrest.

Works Committees

During the war, the problems of the dilution of skilled with unskilled labour, the replacement of men by women, the fixing of piece-rates and other methods of payment, and the difficulties in regard to time-keeping and absenteeism, led to the establishment many joint works committees to consider these matters, and many of these bodies were later developed into general works committees. The pit committees in the mining districts were organized on a joint basis to increase the output of coal by ensuring better time-keeping and proper facilities for work. Similar joint committees were set up in the iron works at Cleveland and Durham, and in both cases the scheme was declared to have increased production substantially.

Since the adoption of the Whitley report, works committees have been formed not only in industries possessing joint industrial councils, but also in industries which have not yet established industrial councils. Where there is a national industrial council a

Constitution
of
Works
Committees

model constitution for works committees is drawn up providing for representation of employers and employees at periodical meetings, and this draft constitution is usually adopted by the works committees in the industry.

There are no statistics available as to the number of firms that have set up works committees, but the British Ministry of Labour reported in September, 1920, that there had been a large increase in the number of works committees formed during the previous few months, and the following industries are listed as having adopted the works committee system:—

Industries
which have
Adopted
Works
Committees.

Artificial Stone
Asbestos.
Bobbin and Shuttle Making.
Brewing.
Cement.
China Clay.
Elastic Web.
Flour Milling.
Gloves.
Gold.
Silver.
Horological and Allied Trades.
Gov't Industrial Establishments.
(Admiralty, Office of Works)
Matches.

Music Trades.
Needles and Fish-hooks.
Optical Instruments.
Patent Fuel.
Plate and Sheet.
Pottery.
Printing.
Quarrying.
Rubber.
Silk.
Spelter.
Tin-Making.
Wall-paper.
Wire.

In addition to the industries which had already formed committees, the following were reported to have the matter under consideration:—

Cable-Making
Cocoa, etc.
Coir Matting.
Gas.
Gov't Industrial
Establishments.
(Air Ministry).

Local Authorities (Non-Trading Services).
Local Authorities (Administrative, etc., Staffs.)
Sea-Fishing (Grimsby.)
Tramways.
Wool (and Allied) Textiles.

Constructive
Work of
Joint
Committees.

The Ministry of Labour states that "many works committees have shown themselves capable of valuable constructive work in addition to such activities as the removal of grievances, the improvement and supervision of working conditions" etc., and cites as typical examples: an investigation into foundry costs, the report on which the works manager described as the best memorandum on the subject he had seen; an investigation into the system of issuing tools and the improvement thereof; an inquiry into the problem of fatigue in the industry and suggestions for improving time-keeping and increasing output.

Subjects
Dealt with
by Works
Committees.

Among the matters reported as coming within the scope of works committees are the following: wages, piece-work rates; application of special legislation; awards or agreements; new processes or change of process; grievances; application of rules; grading of workers; dismissals; discipline; general shop conditions and amenities; hours of work; meal hours; starting and stopping times; overtime; arrangements for holidays; arrangement of shifts, night-work; safety practices; medical and first-aid work; dining service; shop comfort and hygiene; benevolent work; social activities.

UNITED STATES.

Turning to the United States, and bearing in mind differences in the industrial organization of the two countries, the much less completely organized parties in industry in the United States, and the acceptance in Britain of collective bargaining as a part of the normal machinery of industry, we find that the same spirit which has found expression in Britain has been developing in America, has been intensified by war conditions, and stimulated by British experience.

The Executive Council of the American Federation of Labour, in its report of June 1918, affirmed its belief "that in all large permanent shops, a regular arrangement should be provided whereby:—

Report of
Executive
Council
American
Federation
of Labour.

First, a committee of the workers would meet with the shop management to confer over matters of promotion; and whereby

Second, such committee could carry beyond the foreman and the superintendent to the general manager or to the president any important grievance which the workers may have with reference to wages, hours and conditions.

It is fundamental for efficiency in production that the essentials of team work be understood and followed by all. There must be opportunity for intercourse and exchange of viewpoints between workers and managers.

The United States Chamber of Commerce called together a Reconstruction Congress of American Industries at Atlantic City in December, 1918. One of the resolutions passed at this meeting of representatives of nearly four hundred industries contained the following clause: "The most potent measure in bringing about industrial harmony and prosperity is adequate representation of the parties in interest; existing forms of representation should be carefully studied and availed of, in so far as they may be found to have merit and are adaptable to the peculiar conditions in the various industries." The Committee on Industrial Relations of this body declared: "Employees should be accorded a voice in determining the conditions under which their work is performed by the untrammelled election of plant and shop committees to deal with these matters in conjunction with management."

Resolution
of
Reconstruction
Congress
of American
Industries.

In February and March, 1919, a commission of employers, designated by the Secretary of Labour, visited Great Britain to study industrial conditions and methods of dealing with labour reconstruction problems, and this commission examined the Whitley system with special interest and care. In their report to the Secretary of Labour, made early in April 1919, they stated that enquiry developed that the British employers, when conversant with the Whitley plan, were almost universally in favour of it; also that British employers favoured trade union organization among their workmen and favoured not only collective bargaining, but closer touch with the employed.

Report of
Commission
of Employers.

An Industrial Conference, convened by President Wilson, reported in January 1920, as follows:—

Report of
President Wilson's
Industrial
Conference.

The guiding thought of the conference has been that the right relationship between employer and employee can be best promoted by the deliberate organization of that relationship. That organization

should provide for the joint action of managers and employees in dealing with their common interests. It should emphasize the responsibility of managers to know men at least as intimately as they know materials, and the right and duty of employees to have a knowledge of the industry, its processes and policies. Employees need to understand their relation to the joint endeavour so that they may once more have a creative interest in their work.

Joint National
Industrial
Councils.

In the United States, the organization of Joint Industrial Councils on a national scale has been confined necessarily to industries in which the employers and workers are both organized nationally. Two of the first industries to set up permanent joint national bodies composed of representatives of employers and employees were the printing and clothing trades. Employees in the former industry are organized in one of the oldest and most conservative unions affiliated with the American Federation of Labour, while the largest clothing workers' union is of comparatively recent growth, with a large foreign membership. In addition to these industries, some progress has been made in different branches of the marine industry, and a joint council has been set up in the electrical construction industry.

International
Joint
Council in
Printing
Industry.

An International Joint Conference Council for the Printing Industry and Allied Trades was set up in accordance with a resolution passed in April, 1919, and ratified by four associations of employers and five international trade unions. The scheme, therefore, covers the firms which do from 70 to 75 per cent. of the book, periodical and job printing business of the United States. The Council, which consists of ten members, is to be thoroughly informed as to "conditions and interests of all parties in the industry and in a position to suggest for ratification regulations which shall eventually become the law of the industry. . . . In carrying out its purposes, the Council is to function through local unions, chapels and shop committees affiliated with the respective international unions, parties to this agreement, local allied printing trades councils, and local associations of employers in the respective trades."

Among the activities which are included within the scope of the Council are not only wage scales and specific wage agreements, but the outlining of general trade policies which will secure the greatest degree of co-operation and protect the interests of the public; legislation affecting the trade; methods for securing uniform hours and shop practices; co-operation with the Government in regard to selling prices; consideration and review of causes of disputes; apprenticeship; improvement of processes and standards of workmanship; safeguarding the rights of designers of improvements, determination of the practicability of establishing wage adjustment boards, and in fact, the consideration of any matter of "interest to the trade whether industrial, educative, economic, legislative or hygienic."

F. A. Silcox, Director of the Industrial Relations Department of the United States Typothetae of America (one of the employers' associations), stated early in 1920:

One of the chief accomplishments of the councils is intangible in its nature. The representatives of the employers and of the unions, by getting together in an informal way around the table and discussing frankly, without heat or passion, the many perplexing problems in

which both groups are vitally interested, have developed an industrial goodwill and respect for one another's opinions which are of material assistance in laying the foundation for better industrial relations throughout the entire industry. Their method is a joint investigation of the facts. On the basis of the facts thus ascertained a constructive programme is worked out.

Among the tangible results of the council have been the adoption of a set of principles to guide local wage negotiations. These have proved useful in the several cases in which they have been tried out. In one particular city—Denver—it was possible by the application of the principles agreed upon to get a peaceful adjustment for the first time in three years.

One of the most constructive acts of the council has been the adoption of a resolution to the effect that the organizations represented will voluntarily adopt the forty-four hour week throughout the country on May 1st, 1921. The latest reduction in hours was brought about through country-wide strikes costing both the employers and the unions millions of dollars. From all indications the next reduction of hours will come about peacefully and without upsetting the industry. . . . Other subjects to which the council is giving attention are the standardization of contracts, the apprenticeship problem, the creation of district councils, and wage uniformity.

In the electrical construction industry of the United States, a national industrial council similar to that in the printing trades was created in April 1920. The council consists of ten members representing equally the National Association of Electrical Contractors and Dealers and the International Brotherhood of Electrical Workers. Provision is made for conciliation in case of disputes, the council to act as arbitrator if necessary, and for the appointment of committees for special purposes. At the first meeting of the council, consideration was given to such subjects as uniform working conditions throughout the industry; standardization of wages to be based on statistics of the cost of living and other data to be collected; the prevention of improper combinations of local contractors or unions, or both, to keep out outside contractors or workers as the case might be; conciliation and arbitration; joint district and local councils through which the national council may function; and other questions of importance to the whole industry.

National
Industrial
Council in
the
Electrical
Construction
Industry.

As a development of the National Adjustment Commission and the local commissions which were organized in the United States on a basis of representation from employers' and workmen's associations, and which controlled wages and working conditions in the longshore industry during the war, a plan was formulated for continued joint action by these bodies as well as by the similar organizations in the marine industries. Tentative agreements were drawn up whereby a national industrial council was to be formed in each case. These agreements are subject to ratification by the various bodies interested.

National
Industrial
Councils in
Longshore
and Marine
Industries.

Works and Shop Committees

One of the earliest and best known works committee systems in the United States, with the inception of which is associated the name of the Hon. W. L. Mackenzie King, former Minister of Labour of Canada, is the plan of the Colorado Fuel and Iron Company which was established in 1915. Representatives are selected from the five divisions of the steel works or mining camps and these meet in joint

The Colorado
Plan

conference with an equal or smaller number of representatives of the management at least once in every four months. Four joint committees of twelve members each are elected yearly at one of these conferences: one on industrial co-operation and conciliation, for the consideration of any matter pertaining to the prevention and settlement of industrial disputes, terms and conditions of employment, maintenance of discipline, company stores, etc.; the second on safety and accidents; the third on sanitation, health and housing, and the fourth on recreation and education. If the conciliation committee fails to settle a dispute, the matter is referred to arbitration. Similar representation plans are in operation in several other plants in the United States.

Leitch
Industrial
Democracy
Plan.

Another type of industrial committee found in the United States is that formulated by Mr. John Leitch and modelled on the American form of government. This comprises a House of Representatives composed of delegates elected by the workers; a Senate, made up of superintendents and foremen, and a Cabinet consisting of the highest officers of the company. This system provides an orderly method of adjusting grievances and receiving suggestions, but there is no provision for joint sessions of management and men and thus one of the valuable features of the joint system is lacking. An important factor in the Leitch plan is the semi-monthly dividend based on increases in production.

Committee
Systems
of National
War Labor
Board.

Committee systems initiated through awards of the National War Labour Board or other governmental agency during the war, provided for equal representation of employers and employed on the committee, for both separate and joint sessions, and for collective agreements. In some cases, provision is made for arbitration of disputed matters.

An Agreement
in the
Clothing
Trade.

Still another system is found in the clothing plant of Hart, Schaffner and Marx, Chicago. The basis of the scheme is an agreement with the trade union in which almost all the employees are organized. A distinctive feature is the provision for arbitration by an "impartial chairman" who presides over the "trade board" and decides questions on which the representatives of the management and the workers fail to agree. As a final court of appeal there is a "board of arbitration" of three members, one chosen by the company, one by the employees and the third by the other two. These boards have jurisdiction over all matters that arise under the agreement including grievances, rates of wages, hours of labour, recognition of unions, questions of discipline, etc. Decisions rendered by the boards are incorporated in the agreement and thus is built up a body of law for the government of the industry. The Hart, Schaffner and Marx plan has had nine years' successful experience, being established in 1911. It differs from some other plans in providing for collective bargaining with the union, but there is little scope for constructive activities relating to production welfare, education, etc.

It is authoritatively stated that over 250 plants in the United States had in operation some form of works committee or other type of "industrial democracy" at the end of 1919.

In November 1919, the United States Bureau of Labour Statistics reported that information had been received regarding

about one hundred and sixty companies which had works committees of some sort operating in their plants. "In almost all cases where an opinion was expressed, the plan was working satisfactorily although a number qualified this opinion with the statement that it had not yet been in effect long enough to permit of a determination as to whether it would result in better relations permanently. Several companies state also that while it was feared at the outset that there might be a tendency to elect the more radical members of the force as representatives, the general tendency had been toward selection of workmen who were fair-minded and unprejudiced."

WORKS COUNCIL LAWS OF CONTINENTAL EUROPE

While the present study is confined to Joint Councils in Industry in Canada, Great Britain and the United States, it will not be out of place to make brief mention of the works committee movement in European continental countries.

The Workers' Committee Act, recently passed by the Norwegian Parliament, is applicable to all industrial enterprises numbering at least fifty employees, or connected with the transportation, telegraphic or telephonic service. Workers' committees are to be appointed at the request of one-quarter of the employees, the members being elected by workers over 21 years of age. The functions of the committees will include the consideration and discussion of working conditions, remuneration, shop or welfare institutions, etc. Before arriving at any decision in such matters, employers will be required to submit their plans to the committee for approval. The committee is entitled—or if either party wishes it, obliged—to mediate in all disputes arising out of the conditions of labour, or the dismissal of workers. The Act will go into force immediately.

Norwegian
Workers'
Committee
Act.

In Germany, following the close of war, a Works Council Law was submitted to the National Assembly; after much discussion, it was passed on January 18, 1920. This law provides for the compulsory setting up of works councils in all establishments employing twenty or more persons, whether manual workers or salaried employees. The law is applicable also to agricultural and to home workers. All manual and non-manual workers, without distinction of sex, who are 18 years of age and in possession of their civic rights, may vote at the election of works councils. Members of the works councils must be German citizens over 24 years of age, who have finished their vocational training and have, at date of election, worked at least six months in the establishment and at least three years in the trade or occupation in which they are engaged. Members of the works council are elected for a term of one year but their re-election is permissible. It is evident from a number of the provisions of the law that there is no intention of driving the trade unions from their chosen field of activity, but that the Government has desired workmen's councils only in addition to, and co-operating with, the trade unions.

German
Works
Council
Law.

Works councils are required to co-operate in the introduction and application of new methods of work and in the promotion of

industrial peace; to ensure the execution of any award accepted by the interested parties; to deal with shop regulations; to safeguard the workers' right of combination; to receive complaints; to co-operate in matters relating to health and safety, and to take part in the administration of pension funds and other welfare institutions in the establishment.

• Austrian
Works
Council Law.

In Austria, there came into force on July 25, 1919, a law making the establishment of works councils obligatory. The functions of the councils are comprehensive. They attend to the concluding, maintaining and interpreting of collective agreements, and in doing so, have to co-operate with the trade unions. Matters concerning wages which have not been arranged by collective agreements, are likewise entrusted to the councils. They are authorized to examine pay-rolls and to control the payment of wages, to participate in the management of all welfare institutions and to act as boards of appeal with respect to the dismissal of manual workers or salaried employees. Provision is made for a monthly joint conference to discuss improvements in the plant and machinery and the general administration of the establishments. In commercial businesses, where at least thirty salaried employees and manual workers are employed, as well as in all factories and mines, the council is entitled to demand that a balance sheet shall be submitted to it once a year, together with a profit and loss account, and statistics of wages. In joint stock companies, the council is entitled to elect two of the members of the board of directors. Employees over 18 years of age have the right to elect members of the council, such members being persons of 24 years of age and upwards, who have been employed for at least six months.

CONCLUDING OBSERVATIONS

In Great Britain, the proposal of the Whitley Report was that national industrial councils should be established first and that they should promote the formation of district councils and works committees. This suggestion is the logical result of the fact that in Great Britain the important industries are organized in national employers' associations and trade unions which cover almost entire industries. On this side of the Atlantic, there is no such complete organization and the procedure followed in Great Britain is less applicable. The result is that joint action on the part of employers and employed in Canada and the United States is generally developed first in the plant or shop.

In a few plants in the United States, there were experiments along these lines before the war intensified the labour problem, but the great majority of the schemes now in operation in the United States were adopted during the war or since the Armistice. The National War Labour Board, the Shipping Labour Adjustment Board, the Fuel and Railroad administrations and other governmental agencies accepted the principle of joint action and provided for the installation of plant and shop committees in their awards, or encouraged their formation in other ways.

Canadian and American experience with voluntary organized works committees varies from the plans which are based on labour

organization and collective bargaining to those in which trade unions are not recognized, and though there may be collective dealing with the representatives of the workers, there is no "collective bargaining" in the sense which labour usage has given to that term.

One of the most valuable features of the plant, or shop committee, is its provision for regular meetings and joint discussion by the representatives of both parties freely chosen and protected against discrimination for any opinions expressed in the joint conference. Separate sessions are provided in nearly all cases so that there may be even greater freedom of discussion. Serious and prolonged strikes and lock-outs have arisen from petty causes which might have been adjusted if the matter had been approached in the proper manner. The inventive mind of the intelligent workman can put at the service of the employer a technical knowledge and critical faculty of inestimable value, and the management can give the employee an insight into the problem of obtaining raw materials, credits, marketing, etc., that will provide a truer perspective of the whole business of production.

Joint shop and plant committees and councils are still in an early stage of development, and training is necessary for the representatives on both sides. In order that they may be successful, the employees and the management must, moreover, come together in a spirit of co-operation. Their usefulness will depend upon the spirit in which they are adopted. An attitude of suspicion, paternalism, or indifference, will nullify the benefits of the most carefully prepared plan. The system of employee representation, therefore, should be thoroughly democratic. The records should be accessible to the workers, and the rules easily amended after approval by the joint committee.

It is not possible, nor is it desirable, to suggest any hard and fast rule as to how such joint bodies should be constituted, or what their precise functions should be. These are matters to be worked out by employers and employees in collaboration.

The Department of Labour has on file particulars of the various plans for joint committees or councils in industry which have been developed in Canada, as well as information regarding similar plans which have been organized in Great Britain and the United States. This information will be furnished to employers and employees on request, and in addition, the Department is in a position to furnish such technical assistance as may be requested in connection with the adoption of any plans for joint industrial councils or plant and shop committees.

THE LABOUR GAZETTE

Prepared and edited in the Department of Labour, Ottawa

MINISTER—THE HONOURABLE GIDEON D. ROBERTSON.
DEPUTY MINISTER—F. A. ACLAND.

Volume 21

MARCH, 1921

Number 3

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

The month in brief

This issue of the LABOUR GAZETTE contains a review of fatal industrial accidents in Canada during 1920, and it is accompanied by a supplement relating to the report of a conference on the subject of joint industrial councils in which a number of the principal men employed by various Canadian firms in industrial relations work took part. A bulletin on Wages and Hours of Labour in Canada 1901-1920 is also issued as a Supplement.

At the beginning of February unemployment among trade unions was 13.07 per cent of the total membership as compared with 13.05 per cent at the beginning of January and 4.02 per cent at the beginning of February, 1920. According to returns received from 5,000 firms there was a steady decline in the average amount of employment as compared with the average for the previous month.

The cost of the weekly family budget of staple foods continued to decline, averaging \$14.08 at the beginning of February as compared with \$14.48 at the beginning of January, \$15.77 in February, 1920, \$13.41 in February, 1919, and \$7.75 in February 1914. The index number of wholesale prices also continued to decline, being 270.1 for February, as compared with 281.3 for January, 343.5 for February, 1920, 279.8

for February, 1919, and 136.6 for February, 1914.

The time loss due to industrial disputes was greater during February than during January, but less than in February, 1920. There were in existence during the month 22 strikes involving about 2,624 workpeople and resulting in a time loss of 23,547 working days. At the end of the month there were on record 15 strikes involving about 2,283 workpeople.

Proceedings under the Industrial Disputes Investigation Act

During February the Department received reports from two Boards of Conciliation and Investigation established to deal with disputes between (1) various mining companies operating in the Edmonton District and their employees, being members of Local Union No. 4070 United Mine Workers of America, and (2) the Canadian Express Company, lines in Canada, and certain of its employees, being wagonmen, porters, clerks and messengers, members of the Canadian Brotherhood of Railroad Employees. Two applications were received for the establishment of Boards, and, in connection with an application which had been received during January, consent to the establishment of a Board was declined by the Company concerned.

Revised agenda of third International Labour Conference

The third meeting of the General Conference of the International Labour Organization has been postponed by the Governing Body from April to October next. The original agenda which appeared in the *LABOUR GAZETTE* for October, 1920, has been slightly modified in respect to the grouping of items, in order to facilitate the appointment of technical advisers competent in each of the subjects. The revised agenda is as follows: (1) Reform of constitution of the Governing Body of the International Labour Office. (2) Adaptation to agricultural labour of the Washington decisions concerning the regulation of the hours of work. (3) Adaptation to agricultural labour of the Washington decisions concerning (a) measures for the prevention of, or providing against, unemployment; (b) protection of women and children. (4) Special measures for the protection of agricultural workers: (a) technical agricultural education; (b) living-in conditions of agricultural workers; (c) guarantee of the rights of association and combination; (d) protection against accident, sickness, invalidity, and old age. (5) Disinfection of wool infected with anthrax spores. (6) Prohibition of the use of white lead in painting. (7) The weekly rest-day in industrial and commercial employment. (8)-(a) The prohibition of the employment of any person under the age of 18 years as trimmer or stoker; (b) the compulsory medical examination of all children employed on board ship.

Legislative programme of Trades and Labour Congress of Canada

On February 19 the executive of the Trades and Labour Congress of Canada waited upon the Dominion Government and presented a legislative programme embodying requests contained in resolutions passed at the last annual convention. These included the following: With regard to conventions and recommendations of

the International Labour Conferences of the League of Nations a request was made that steps be taken to give effect to all these matters accepted by the government as coming within the sphere of the Federal Parliament, especially as to the eight-hour day on public works, etc., and unemployment insurance. A request was made for the establishment of old age pensions, and state insurance for sickness. With regard to immigration, requests of the previous year were renewed, for repeal of the amendments to the Immigration Act making possible the deportation of British born subjects, the establishment of a central empire emigration board, the prevention of the recruiting of labour outside of Canada by private agencies, and the limitation of the number of orientals in Canada to not more than one for each one thousand of population. Amendments to the Industrial Disputes Investigation Act extending the provisions of the Act to apply to police, firemen, etc., and to the industries mentioned in the Act whether owned privately or publicly were requested. Requests were also made for the creation of a tariff commission on which labour should have representation, for the granting of representation to workers on the boards of management of the Canadian National Railways and express companies, for the establishment of national and departmental councils for the Federal Government Service similar to the provisions of the Whitley Committee's Report. Amendments to the Criminal Code were asked (a) to repeal the section referring to sedition and seditious intention, libel and conspiracy; (b) to re-insert the section formerly in the code permitting watching and besetting (picketing) to obtain or communicate information; (c) to reconsider amendments passed during 1919, especially the elimination of the words "force," "terrorism," etc; (d) to add an amendment defining sympathetic strikes; and (e) to provide punishment by imprisonment for persons hoarding foodstuffs. Amendments to the Franchise Act, 1920, were requested

providing for (a) repeal of the clause prohibiting trade unions or similar organizations from contributing to election campaign funds; (b) making federal election day a public holiday; and (c) providing for election by group constituencies under proportional representation. Requests of previous years were renewed for co-operative legislation, extension of public ownership of public utilities, amendments to the Copyright Act, registration of union labels, and changes in terms of service and remuneration of rural mail carriers.

**Annual Conference of
Dominion Social Service
Council**

The fourteenth annual conference of the Dominion Social Service Council was held at London, Ont., on January 25-27. A wide

range of social problems were discussed, among these being Child Welfare, Social Hygiene, the Marriage Laws, Political Purity and the Franchise, Prohibition, Criminology, Indian Affairs, Immigration and Industrial Life, and the Problem of Unemployment. It was decided that the Motion Picture Committee and the Child Welfare Committee, which are now sub-committees of the executive, should be made standing committees of the Council, and that a pamphlet giving information on Child Welfare Week would be prepared and sent to all organizations interested. In regard to Immigration and Industrial Life, the Council declared itself in favour of the following legislation: (1) minimum wage laws, first for women and girls, then for boys; later for at least the unorganized men workers; (2) a programme for dealing with unemployment including (a) a national employment service, (b) "buffer employment" and (c) unemployment insurance; (3) health insurance; (4) old age pensions, and (5) the right of both employers and employees to free speech, free assembly, freedom to organize, and to be represented by persons of their own choice. A proposal was adopted that the Minister of Immigration be approached in regard

to the holding of a conference on the Canadianization of Immigrants. It was shown that in 1918 there were 403,221 non-English alien males over 16 years of age in Canada of whom 252,977, or 62.5 per cent, were not naturalized. A scheme for absorbing these people in a national sense was suggested which provided for imparting a working knowledge of English; teaching what is meant by Canadian citizenship; and incorporating in Canadian national life whatever was found valuable in the lives of the newcomers. It was suggested that the Minister of Immigration should give to each provincial treasurer an allotted grant for Canadianizing purposes, such grant to be administered by the Minister of Education, and that there should be an advisory council for this purpose. In discussing the unemployment problem, it was pointed out that unemployment comes by seasons and cycles, that unemployment arising out of trade depressions could be mitigated by reserving government work of a non-urgent character for the recurrent periods of hard times, and that careful regulation of the tide of emigration and unemployment insurance would help to relieve the situation. Technical education, it was stated, was an essential plank in any programme for the prevention of unemployment. The report of the Committee on Penology, which was adopted, contained the following statement: "The industrial systems in all such (penal) institutions should be so extended to render unnecessary any stone-pile and unproductive work and should include productive industrial activity, established by the Government to render support and aid to prisoner's family, or for deposit to prisoner's credit, to be paid upon his parole or expiration of sentence." The convention also favoured the establishment of women's courts, juvenile courts in all centres, the appointment of women magistrates and women officers to deal with women offenders in the courts and the jails, and the provision of an adequate system for boarding out of children so that they

are visited, at least while young, by women more frequently than once a year. Another motion adopted by the convention was to the effect that the Council recommend to the respective authorities that further experiments be made in proportional representation in municipal, provincial and federal elections and that the report be sent to the units for their recommendation and consideration. It was decided that the next annual meeting should be held at Winnipeg.

The following officers were elected: Honorary Presidents, Most Rev. S. P. Matheson, D.D. LL.D., Primate of Canada, and Chester D. Massey; President, Very Rev. Dean L. N. Tucker, London, Ont.; General Secretary, Rev. Dr. J. G. Shearer, Toronto; Assistant Secretary, Miss Charlotte Whitton, Toronto; Recording Secretary, Rev. Dr. T. Albert Moore.

Convention of Ontario Provincial Builders' and Supply Association A convention of the Provincial Builders' and Supply Association, of Ontario, was held at Stratford on February 15-17. Resolutions were adopted protesting against the proposed 8-hour day; opposing any further legislation to increase workmen's compensation above the present rate of 66 2-3 per cent; requesting the compensation board to take another vote in regard to the formation of an accident prevention association; pledging support and sympathy toward the proposal of optional employment and urging that future agreements contain a clause whereby the union which is a party to the agreement will agree conclusively not to leave work on sympathetic strikes. While agreeing as to a fair amount of technical education, the feeling of the Association was not to impose on the apprentice the penalty or pressure of attending night classes, but to use their influence among the members to pay a wage that will be in line with the cost of living, and average as a minimum one-third of the rate paid journeymen at the time of employment.

The following officers were elected: president, Norris E. Gibb, Sarnia; first vice-president, L. A. Boss, London; second vice-president, P. McCarthy, Sault Ste. Marie; secretary-treasurer, George Gander, Toronto.

British Industrial Safety Conference

An Industrial Safety Conference, the first of its kind to be held in England, which was organized by the Home Office and the British Industrial Safety First Association, was held at London on September 22, 1920. At this meeting Mr. Gerald Bellhouse, C.B.E., Deputy Chief Inspector of Factories, stated that in 1919 notices were received by Inspectors of the Factory Department of 1,384 fatal accidents, 40,056 accidents due to machinery and 84,582 non-machinery cases. He said that two-thirds of the accidents reported were not due to machinery at all and of the remainder not more than one-third could have been prevented by better safe-guards. The majority of accidents were due to acts and defaults of the individual and could be eliminated only if the individual could be taught to take proper precautions against accidents. This educational work is the main function of the "Safety First" movement. Examples were quoted from documents of the National Safety Council of the United States which showed that in a steel plant employing 2,500 men, the number of men injured declined from 769 in 1916 to 351 in 1917 and 124 in 1918. During the first five years of accident prevention work in the establishments of the International Harvester Company deaths from accidents were reduced 60 per cent, and the United States Steel Corporation stated that during twelve years ending with 1918 23,195 of its employees were saved from being either killed or seriously injured compared with the accident record of 1906. It was claimed, he said, in the United States, that given a proper safety organization 75 per cent of all accidental deaths and serious injuries could be eliminated in industry. Five points were mentioned as essential to the success of

a "Safety First" organization. (1) An employer in active sympathy with the movement; (2) a safety inspector with authority to supervise all the safety work in the factory; (3) the co-operation of the foremen; (4) the establishment of a safety committee composed of representatives of the management and the workers, meeting at regular intervals to inquire into the causes of accidents, to receive reports of the safety inspector to inspect the works at regular intervals and make recommendations on all matters appertaining to safety; (5) the use of bulletin boards on which are pasted pictures and stories to impress upon workmen what they can do to protect themselves.

British Labour and Unemploy- ment

On January 11, a joint meeting of the National Executive of the British Labour Party and the Parliamentary Committee of the Trades Union Congress was held at London. The object of the meeting was to consider the policy which the labour movement should adopt toward the invitation of the government to co-operate with it and with employers in a Committee of Inquiry into measures for the alleviation of unemployment, and to declare its attitude toward the proposal of the government that short-time working should be extended as a means of distributing the amount of available employment. The short time was condemned on the ground that it was made without any consideration of the diminution of home demands for commodities which would follow upon it in consequence of the decrease in purchasing power. The invitation to co-operate with the government in the Committee of Inquiry was also rejected. A joint committee was then appointed by the meeting to draft a definite programme and policy with regard to unemployment. The Committee presented its report at a joint delegate conference composed of the full executives or their representatives of the trade unions and local labour organizations, which met on January 27. The Joint Committee asked the Conference to

vote upon two resolutions, the first endorsing and accepting the report of the Committee, and the second providing for the communication of the report to the Cabinet and the House of Commons. Both resolutions were unanimously adopted by the Congress.

The proposals in the report for dealing with unemployment fall under two heads; first the maintenance of the unemployed and under-employed, and secondly the provision of work. With regard to the first it was recommended "that a person for whom no work is available at the Employment Exchanges, or through his or her Trade Union, shall be entitled to maintenance, and that the rate of maintenance (including benefits under the Unemployment Insurance Act, 1920) shall be at least 40s. per week for each householder, and 25s. per week for each single man or woman above the age of 18, with additional allowances for dependants." Also "that the payment of benefits should be continued so long as a person remains unemployed." Where short time is being worked, payment of maintenance rates calculated on the total number of days lost is recommended. Recommendations were also made for the inauguration of training schemes for men and women and for the immediate enforcement of those sections of the Education Act, 1918, which relate to the attendance at school and the employment of children and young persons.

With regard to the provision of work a number of recommendations were made relating to the better organization of the requirements of public departments and local authorities; housing and the encouragement of public guilds; control of materials by the Government where production is restricted through the operation of trusts; the withdrawal of juvenile labour, with provision for educational training; land cultivation, repair of railways, roads, waterways and harbours, and other works of a socially productive character. In order to avoid the necessity of short-time working, the committee recommended an immediate legal restriction of hours of work to 44 per week without

reduction in wages and the prohibition of all overtime except when absolutely necessary to enable other workers to be started. The committee also advise the removal of exceptional restrictions on borrowing by local authorities, and the placing of the credit of the state at their service, and the adoption of measures for the restoration of industry and foreign commerce including an immediate resumption of trade with Russia.

British building trades reject government scheme for employment of ex-service men The plan arrived at by negotiation between the British Government and the Resettlement Committee of the Industrial Council for the Building Industry for increasing the supply of labour for housing schemes, which was out-

lined in the January issue of the *LABOUR GAZETTE* on pages 61-63, was submitted to the executives of the constituent bodies of the National Federation of Building Trades Operatives on February 3, when a decision was reached to reject the offer. The plan of the government involved the admission into the building industry of 50,000 ex-service men. The ground of opposition to this plan as given in the February issue of the *British Labour Gazette* was that with proper organization there was ample building trade labour to meet all requirements. With regard to bricklayers it was claimed that of the 25,000 who left the industry during the war large numbers were returning each month, and during the last few months about 2,000 apprentices had entered the trade. Building and repair work on factories, which had fallen into arrears during the war, having now been practically completed, a large volume of labour was said to be available for housing schemes.

Industrial Peace Act, Australia The Commonwealth of Australia has passed an Act providing for the settlement of industrial disputes extending beyond the limits of any one state. It provides for the establishment of a

Commonwealth Council of Industrial Representatives and six or eight other members, representative equally of the employers and of the recognized organizations of employees. The chairman shall be chosen by agreement between these representatives of employers and employees, or failing agreement, by the Governor-General. The powers of the Council shall be: (a) To consider any matters, conditions and tendencies in any part of the Commonwealth leading or likely to lead to industrial disputes; (b) to inquire into any industrial matter brought before it by a member, or referred to it by the Governor-General, and to declare its opinion thereon; (c) to confer with any persons or associations as to any matters affecting the prevention or settlement of industrial disputes; (d) to appoint Committees for the purpose of any inquiry or conference; (e) to summon any person for the purpose of conference or of giving evidence; (f) to make reports to the Governor-General concerning any industrial matter. The Governor-General may also appoint district councils similar in constitution powers and functions to the principal council, which shall inquire into and report to the latter on matters referred to them. Special tribunals may also be appointed by the Governor-General which shall have cognizance of any industrial dispute referred to it by the parties concerned, or any dispute as to which no agreement has been reached after the holding of a compulsory conference and which has been referred to the tribunal. No dispute as to which the hearing has commenced in the Commonwealth Court of Conciliation and Arbitration shall be referred to a special tribunal. The disclosure, without the consent of the person concerned, of evidence relating to any trade secret, profits or financial position is forbidden, and all such evidence shall if so desired, be taken in private. A special tribunal, or the chairman thereof, or the Minister, may summon any person to attend at a conference for the purpose of preventing or settling industrial disputes. Where an agreement is not reached at such a conference, the

dispute may be referred to a special tribunal. Any order or award made by a special tribunal shall be binding on the parties concerned and may be enforced as an award of the Commonwealth Court of Conciliation and Arbitration, and any agreement made in writing as to an industrial dispute before a special tribunal or at any compulsory conference may be filed with the Industrial Registrar and thereupon be binding and enforceable as if it were an award of the Court. The Governor-General may appoint a local board to exercise jurisdiction within the limits prescribed by any special tribunal except that its determinations are subject to review by the special tribunal. During the currency of any award or order by a special tribunal or local board the Commonwealth Court of Conciliation and Arbitration shall not make any award or order inconsistent therewith.

Labour Conference at Washington On February 23, representatives of practically all national and international unions

affiliated with the American Federation of Labour and of the railroad brotherhoods met at a conference at Washington, D.C., called by the president, Mr. Samuel Gompers, under instruction of the executive council, to consider alleged attacks on the trade union movement, and to define their attitude with regard to attempts to establish the anti-union shop, wage reductions, anti-strike laws, compulsory arbitration, labour injunctions, and other matters affecting labour. It was declared by the conference that employers and believers in European fanaticism were working for the destruction of the trade union movement, though inspired by different motives and using each other as tools in the struggle to overwhelm democracy and put an end to American progress, politically and industrially. Profiteering and the over-capitalization of industrial and commercial projects, which compel the public to pay interest on inflated prices, were denounced. The principle of collective bargaining was emphasized

as one of the great stabilizing influences in industry in the relations between employers and workers. The conference called for public support and recognition of: "The right of the working people of the United States to organize into trade unions for the protection of their rights and interests. The right to, and practice of, collective bargaining by trade unions through representatives of their own choosing. The right to work and to cease work. The right to bestow or withhold patronage. The right to the exercise of normal activities in furtherance of the welfare of labour." The conference also urged public support of the following: "Enactment by congress of legislation which shall protect the workers in their organized capacity against the concept that there is a property right in the labour of a human being. No application in the use of injunctions in industrial disputes where they would not apply in the absence of such disputes. Prohibition of immigration for a period of not less than two years. More general application of the initiative and referendum in the political affairs of the United States and of our several states. Removal by congress of the usurped power of courts to declare unconstitutional laws enacted by congress. Election of judges. Immediate restoration of exemption from or the repeal of all anti-combination and so-called conspiracy laws. Restoration of an adequate federal employment service. Administration of credit as a public trust in the interest of all the people. Repeal by the states of all industrial court laws and all restrictive and coercive laws, including the so-called 'open port' law of Texas, and freedom from decisions of holding trade unions and individual members thereof liable in damages for the unlawful acts of others." In order to carry out the aims and policies of the conference, it was decided to establish a publicity bureau for the purpose of making accessible to everyone the fullest information about the work and aims of organized labour.

**Joint Council
of People's
Light, Gas and
Coke Co.,
Chicago**

A constitutional convention of 55 delegates elected by the employees and 55 delegates elected by the company's officials of the People's Light, Gas and Coke Company of Chicago, Ill., was held on January 20 to draft a constitution to give workers an equal voice in settling questions of wages, hours and conditions of employment. The first draft of a plan was prepared by a bureau of economics after a study of measures adopted by large industries. The New York periodical *Law and Labour* states that "In accordance with the provisions of the plan as proposed there will be three employees' councils. Foremen, superintendents or any other official who might be regarded as representing the Company's interest are not eligible for election to the councils. The councils will be made up as follows: (1) Departmental joint councils, one for each department, or group of small departments, meeting regularly once a month (and in special sessions when necessary) on company time, with full power to take up all questions concerning employees in their relations to the company. (2) Special joint councils (when necessary) representing two or more departments and composed of the employee representatives and the management representatives of those departmental councils. (3) A general joint council made up equally of employee representatives and management representatives elected by the respective departmental councils, a sort of higher court. An Industrial Relations Department will be provided to co-operate with the employees' representatives. For any employee with a grievance the following method of procedure is proposed: (1) By taking it up with immediate superiors in the department where employed; or (2) with the duly elected employee representative or representatives in the departmental joint council; or (3) with the manager of industrial relations; or (4) by direct petition to

the departmental joint council. Appeals may be taken from the decisions of the lower officials in order of their rank to the president, and if the president's decision is not satisfactory, the question is automatically submitted to arbitration."

Jottings

A bill has been introduced in the Quebec legislature by the Provincial Government for the establishment of a board of arbitration to prevent strikes among policemen, firemen and other public employees whose duty it is to protect lives and property.

An industrial relations committee composed of three members of the Board of Trade, 3 members of the Trades and Labour Council, and 3 members of the Independent Labour Party has been formed at Sault Ste. Marie to consider and endeavour to settle any differences which may arise. A committee with a similar object has also been formed at Hamilton.

The Master Lathers' Association of Toronto, which has hitherto been employing union members only, has declared its intention to employ both union and non-union help until such time as the trade is re-organized.

Announcement has recently been made of the formation of the Timber Industries Council of British Columbia to promote co-operation and stability in the forest industries, and help the development of the timber resources of the province; to provide central facilities for the association of forest industries and timbermen; and to collect and circulate information useful to timber owners, lumbermen, loggers and other members of the forest industries. Mr. E. W. Hamber, president and general manager of the B. C. Mills, Timber and Trading Company, is president of the Council which will have representatives of the B. C. Lumber and Shingle Manufacturing Association, the B. C. Loggers'

Association, the Shingle Agency of B. C., the B. C. Timber holders' Association (in course of formation) and the Pulp and Paper companies.

On March 2, there was held at Fredericton, N.B., a meeting of representative employers of the province including lumbermen, mine owners and manufacturers, and it was decided to form an accident prevention society for New Brunswick.

A movement has been started at Chatham, Ontario, to organize a Safety Council to be composed of the chairmen of the safety committees of the industrial plants of the city.

The H. H. Crosby Shoe Company of Hebron, N.S., recently presented their employees with a six per cent bonus, (their portion of the profits on the business for 1920), similar to that paid to the employees in 1919.

The British Ministry of Labour has issued a circular to Joint Industrial Councils and Interim Industrial Reconstruction Committees, and to Trade Boards, calling attention to the advantages of short-time working, in preference to the dismissal of a portion of the staffs, as a means of spreading the amount of employment available, when it is impossible to keep the whole body of workpeople fully employed.

The National Federation of Women Workers of Great Britain has completed its amalgamation with the National Union of General Workers, of which Mr. J. R. Clynes, M.P. is president. The General Workers have a membership of over 500,000 and the Women Workers between 40,000 and 50,000.

At a meeting of all sections of the transport workers held at London, England, on January 2, a resolution was adopted calling for the amalgamation of

all the different unions of transport workers except railwaymen.

The British *Labour Gazette* for February contains a statement to the effect that the Polish Legation has informed the Swiss Federal Council of the adhesion of the Polish Government to the Berne Convention of 1906 on the prohibition of the employment of women at night in industrial occupations. Up to the present the following states have signed this convention: Germany, Austria, Belgium, Denmark, Spain, France, Great Britain, Hungary, Italy, Luxembourg, Netherlands, Poland, Portugal, Sweden, Switzerland, and Tunisia.

The death of two members of the Governing Body of the International Labour Office has recently been reported. Baron des Planches and Karl Legien. Baron Edmond Mayor des Planches, who, as representative of the Italian Government, presided at the International Seamen's Conference at Genoa in June, 1920, died at Rome on December 25. Baron des Planches had enjoyed a long and distinguished political and diplomatic career in the service of Italy. Karl Legien, who died at Berlin on December 26, was a Deputy to the Reichstag and President of the General Union of the German Free Trade Unions, an office which he had held since 1890. It will be recalled that M. Guerin the French employer member of the Governing Body died immediately after the April meeting. Three members of the Governing Body, as originally constituted, have therefore now passed away. The death also recently occurred of Miss Mary MacArthur, a prominent labour leader of Great Britain. Miss MacArthur was a member of the Executive Committee of the British Section of the International Association for Labour Legislation, and she was one of the advisers to the British labour delegate at the First International Labour Conference at Washington.

INDUSTRIAL CONDITIONS DURING FEBRUARY, 1921

I.—General Review

The average volume of employment in Canada continued, during February, to show a slightly downward tendency, the decline being somewhat less pronounced in New Brunswick, Quebec, Saskatchewan and British Columbia than in the remaining provinces.

The Labour Market

In the Metals, Machinery and Conveyances group a decline was noted early in the month in the railway car shops in Ontario and in the shipyards and the crude, forged, rolled and foundry divisions in the Maritime Provinces and Quebec; later in the month, however, some recovery occurred in these industries, particularly in the Province of Quebec; the shipyards in British Columbia also showed some improvement in the third week. In the Food, Drink and Tobacco group gains were recorded in the confectionery and tobacco industries, but abattoirs and packing houses were somewhat less active, while some sugar refinery workers were laid off owing to the temporary closing of plants; other industries in this group continued fairly steady. The Textile and Clothing groups both made marked gains during the month, especially in Quebec and Ontario, where in the former group the thread, yarn, cloth, hosiery and knitted goods factories, and in the latter group, the boot, shoe, hat, cap and garment factories were increasingly active. The Pulp and Paper industry recorded an average decline in the numbers employed. In the Woodworking and Furniture group increased activity in anticipation of the approaching building season caused some increase of staffs. The Building industry, however, still continued generally dormant, and Railway Construction was also very slack. Transportation declined steadily during the month. The Logging industry en-

tered upon the usual period of inactivity which marks the interval between active operations in the woods and river driving; but in British Columbia some camps were opening up. The sawmills generally showed increased activity, while the Mining and Quarrying group continued to decline.

The loss of time on account of industrial disputes was greater than during January, 1921, but less than during February, 1920. There were in

Strikes

existence at some time or other during the month 22 strikes, involving approximately 2,624 workpeople and resulting in an estimated time loss of 23,547 working days, as compared with 10 strikes, 964 workpeople and 15,951 working days in January, 1921; and 25 strikes, 2,345 workpeople and 30,920 working days in February, 1920. On February 1, there were on record 7 strikes, affecting 430 workpeople. Fifteen strikes were reported as having commenced during February, as compared with six in January, 1921. Three of the strikes commencing prior to February and three of the disputes commencing during February were reported terminated, leaving 15 strikes, involving 2,283 workpeople on record at the end of the month.

The downward movement in prices continued, lower levels being reached in practically all lines with the steepest declines in

Prices

grain, vegetables, and textiles. The Departmental index number of wholesale prices was down to 270.1 for February as compared with 281.3 for January, 343.5 for February, 1920, 279.8 for February, 1919, and 136.6 for February, 1914.

The prices of food continued to decline in most lines, the average cost in

sixty cities of a list of staple foods being \$14.08 at the beginning of February as compared with \$14.48 at the beginning of January, \$15.77 in February, 1920, \$13.41 in February, 1919, and \$7.75 in February, 1914. The chief decreases for the month were in eggs, but-

ter, bread, potatoes, with slight decreases in some meats, in bacon, lard, flour, rolled oats, rice, beans, prunes, sugar. Coal and wood averaged higher, but coal prices were lower in some localities. Rents were reported to be rising in rates for the annual spring leases.

II.—Industries and Trades

Labour conditions in the steel industry of Nova Scotia continued depressed during February, the railway employees of the **Metals and Machinery** steel companies being still on strike. SYDNEY reported the production of the local plants as follows: pig iron, 8,100 tons; ingots, 11,100 tons; blooms and billets, 8,700 tons; rebs, 2,500 tons; plates, 3,000 tons; wire, 400 tons; nails, 900 tons; one blast furnace was in operation; the metal roofing trade was decreasingly active, but stove and furnace workers were fairly well employed. At SYDNEY MINES production in the steel and iron plants was still suspended owing to the railway employees' strike. HALIFAX reported staffs reduced in the rolling mills and in the stationary and portable steam engine and boiler shops; only two departments of the skate factory were in operation. Very dull conditions prevailed in the iron working trades at AMHERST; the rolling mills closed down for lack of orders; about 200 men were thrown out of work by the shutting down of the malleable iron foundry, while other foundries worked only two to four days a week; machine and boiler shops also worked on short time, but some improvement was looked for; the iron enamel plant was very dull. Moulders at CHARLOTTETOWN had a dull month, but electrical workers were busy, and other metal workers were fairly well employed. The rolling mills at St. JOHN closed down for repairs on February 17 for ten days; the nail factory partially resumed operations about the middle of the month, but experienced difficulty in securing men; the edged-tool factory remained closed.

Foundries and machine shops at FREDERICTON were fairly active. At MONCTON the machine shops were normally active, but at one foundry the moulding department was shut down, while the fitters worked only with a small staff. At MONTREAL the structural iron and steel and engine and boiler plants were quiet, but the sheet metal and electrical industries were fairly active. QUEBEC reported quiet conditions in the structural iron and steel plants; the stationary and portable engine and metal roofing industries were very dull, and stove and furnace workers had little employment. At SHELBROOKE the structural iron factories were fairly active, but stationary and portable engine and boiler plants were quiet. St. HYACINTHE reported employment good in the iron foundries and machine shops. Less than half the normal staffs were employed at the iron foundries at THREE RIVERS. At SOREL slack conditions were noted among boiler makers, machinists, pattern makers and moulders. OTTAWA and HULL reported the usual seasonal slackness in foundries and machine shops, but prospects were said to be improving. At TORONTO the metal and machinery industries generally continued quiet with a slight improvement in some lines; at one steel plate mill, however, the staff was further reduced, only a few men being retained; tool and die makers were rather more active and farm implement factories increased their staffs. HAMILTON reported rather quiet conditions throughout the group, with the exception of steel construction; only about one-fourth of the moulders at the stove and furnace foundries were employed, and

these worked only 4 days a week; a similar proportion of machinists were at work. At NIAGARA FALLS the depression in the metal working trades was reflected by conditions in the silver plating and cutlery industries, in which two of the three local plants were running on a 4-day week basis. St. CATHARINES reported boiler makers and electrical workers active, but other departments of the metal industry were rather quiet. At BROCKVILLE the furnace foundry showed signs of renewed activity; tinsmiths and tool and hardware workers were fairly well employed. The cutlery factory at KINGSTON remained closed with no immediate prospect of reopening. Considerable unemployment resulted at BELLEVILLE from the temporary shutting down of the steel plant; workers on portable engines, boilers, hoisting and other machinery were well employed. Iron foundries at PETERBOROUGH were rather quiet with about half the normal number of moulders and coremakers employed; many machinists also were out of work, but boilermakers were well employed and general electrical workers were very busy, about 1,600 being employed. At GALT the machine shops were all working on short time, though prospects in the iron and steel trades were said to be improving. BRANTFORD reported fair activity in stationary engine and machinery plants, but a few men were laid off at the gasoline engine works; the steel products plant was rather slack; malleable iron and electrical machinery workers were fairly well employed; staffs were slightly reduced at the farm implement plants. KITCHENER reported some increase of activity at the foundries and machine shops; electrical fixture plants worked full time; sheet metal workers, pattern makers, farm implement and portable and stationary engine workers and clock makers were fairly well employed. Short time was still the general rule in the metal trades at GUELPH, but the iron pipe factory ran full time. At WOODSTOCK the foundry ran with reduced staff. LONDON reported the rolling mills, wire and iron and concrete

machinery plants busy, with full staffs employed; engine and boiler makers were quiet; the stove and furnace foundries were busy, about 1,000 workers being employed, including those engaged in the tin and enamel departments; threshing machine workers were also busy, but the brass working industry was slack. Iron and foundry workers at St. THOMAS were on short time. At WINDSOR the structural iron and steel industry was active, staffs being increased; extra help was employed also at the injector and brass factories. At OWEN SOUND the machine shops ran on short time, but the nut and bolt factory was busy. The farm implement, stove and tool factories at ORILLIA ran with normal staffs employed. At SAULT STE. MARIE steel workers were increasingly active, but the iron foundry practically closed owing to lack of orders. At WINNIPEG all departments of the metal industry were reported very quiet, the contract shops being placed upon a working week of 40 hours, and towards the end of the month closing down for a period of five days. The machine shops at BRANDON had a quiet month. Iron workers at EDMONTON were fairly active. At VANCOUVER the rolling mills and structural iron and steel plants were very quiet; stove and furnace, electrical apparatus, metal roofing and sheet metal factories were also quiet. NEW WESTMINSTER reported fair activity in the engineering, sheet metal, and electrical plants. At VICTORIA stove foundries were fairly active, but electrical fitting shops were quiet.

At SYDNEY the railway repair shops and shipyards continued rather quiet during February. A large number of shipyard workers were laid off at HALIFAX. The car and foundry works at AMHERST, owing to lack of orders, practically closed down in the third week of the month, between 700 and 800 men being thrown out of work. CHARLOTTETOWN reported the railway shops and roundhouse working 40 hours per week, with shop-

men laid off on alternate Fridays. At MONCTON the locomotive and car shops of the Canadian National Railways were less active, working time being reduced, and temporary employees laid off. At MONTREAL the railway shops were fairly active, but the shipyards were quiet. QUEBEC reported slackness in the locomotive and car shops; increasing activity was noted in the shipyards, with signs of an early season. The railway shops at SHERBROOKE and ST. HYACINTHE were fairly active. Only a small proportion of the normal staffs were employed in the shipyards at THREE RIVERS. At SOREL nearly all the shipyard employees recently laid off were taken back. At OTTAWA and HULL some additional workers were taken on at the carriage building department of the car shops. At TORONTO the automobile industry showed some activity; railway repair shops were fairly active. The car shops at HAMILTON closed for two weeks but reopened before the end of the month. Motor boat building at BROCKVILLE showed signs of revival for the coming season; motor car workers were only partly employed, but prospects were said to be brightening. At KINGSTON about 575 men were employed at the locomotive shops, but this number, it was said, would be reduced shortly, owing to lack of orders; about 260 men were employed at one shipyard, with prospects of continuance; considerable repair work on steamers was in progress in view of the opening of navigation. At BELLEVILLE automobile repairers and makers of parts were fairly active, with good prospects for the coming season; railway repair shops were busy. Wagon and carriage workers at BRANTFORD were well employed. Auto truck plants at KITCHENER were quiet and bicycle factories only fairly active, without any demand for more help. At LONDON the automobile assembling plant operated with a full staff; the Grand Trunk car shops continued slack, with about 200 employees still laid off. At St. Thomas the Michigan Central and Père Marquette shops continued quiet. At WINDSOR the Ford motor

works were again running full time in most departments, and other automobile factories showed some increase in the numbers employed. The carriage factory at ORILLIA continued quiet. At the shipyard at PORT ARTHUR more workers were laid off during the month. The car shops at FORT WILLIAM were quiet, and were expected to shut down at the end of the month. At WINNIPEG the railway shops worked 36 hours a week for the first half of the month, and shut down for the last week; automobile repair shops continued slack, but some improvement was noticed as the month closed. Railway repair shops at BRANDON were fairly active. At CALGARY railway shopmen had a dull month, only 32 hours per week being worked, and the plant closing down in the last week of the month. At VANCOUVER slack conditions were noted in the locomotive, boiler and car shops; one shipyard was busy, while another which was closed for the first part of the month opened up later, though not yet fully manned; carriage, cycle and motor engine work was very slack. At VICTORIA the iron shipyards were active, one having large repair contracts and running a night shift, but the wooden shipyards were quiet. The dry dock at PRINCE RUPERT was temporarily active during the month on repairing steamers.

At SYDNEY abattoirs and other industries in the food group continued steadily active. The sugar refinery at HALIFAX worked with staff below normal; confectioners were rather more active in consequence of a decrease in the price of their products; aerated water and soft drink plants were normally active for the season but abattoirs were very quiet. The condensed milk plant at TRURO was still closed. At CHARLOTTETOWN slack conditions were noted throughout the group excepting in the bakeries. ST. JOHN reported the sugar refinery running two shifts of 11 and 13 hours; some employees were laid off at the mills pending repairs; bakers and confectioners were rather slack; breweries,

Foods, liquors and tobacco

creameries and dairies were busy, but soft drink plants were quiet. At MONCTON the biscuit factory continued working with a staff of about 150; bakeries ran to capacity; butter factories and creameries were fairly busy for the season, but cheese factories remained closed and were not expected to reopen before May; soft drink factories were quiet. At FREDERICTON the latter plants were busy for the season; packing houses, flour mills, bakeries and confectionery plants were all active. At MONTREAL flour and feed plants, abattoirs and packing houses showed a decline in activity; bakers, confectioners and soft drink and brewery workers were fairly well employed, but the cigar industry was rather dull. QUEBEC reported slackness in abattoirs and meat packing and soft drink plants; breweries were less quiet owing, it was said, to the prospect of the new license law; bakeries, confectionery and soft drink plants were quiet. At SHERBROOKE fairly active conditions prevailed throughout the group, with the exception of creameries and dairies which were quiet. The flour mill at ST. HYACINTHE worked to capacity; bakeries, confectionery and soft drink plants were active; cigar and tobacco makers worked 9 hours per day without curtailment of staffs. At THREE RIVERS conditions were generally good throughout the group. OTTAWA and HULL reported shipments to abattoirs as still light; creameries were more active owing to the Lenten season; a slight improvement over the previous month was noted in confectionery plants. At TORONTO flour, feed and cereal plants had a fair amount of work; abattoirs and meat packing houses and vegetable canneries were quiet; bakers had steady employment, but confectionery plants were quiet; the cigar trade was dull, with many workers out of employment. In the tobacco industry at HAMILTON about 75 per cent of the workers were idle; bakers were slack, but flour and feed mills and breweries were active, and soft drink workers fairly well employed. The food producing industries at NIAGARA FALLS and ST. CATHARINES were reported

busy. At BROCKVILLE the condensed milk industry was busy and other industries in the group were fairly busy. The biscuit factory at KINGSTON had a busy month, employing 125 hands; cigar workers had increased employment. At BELLEVILLE flour and feed mills, bakeries, creameries, dairies and soft drink plants were all reported busy. The flour mills at PETERBOROUGH showed some recovery from the slackness of the previous month, but cereal and feed mills continued quiet; meat packing houses, creameries and dairies were busy. Conditions were generally good at GALT throughout the group, except in the soft drink department. At BRANTFORD packers were fairly busy, but the preserving factory was slack, as usual at this season. At KITCHENER the flour mills, candy and biscuit factories, creameries, dairies and breweries had a moderately active month; the beet sugar factory ceased work after the most successful season for years, about 20 men being still employed in shipping, etc.; bakeries, sausage factories and abattoirs had a good month, but the cigar industry was dull. Flour and feed mills at GUELPH ran full time; bakers and confectioners were active. LONDON reported increasing activity in the flour mills, but cereal plants were quiet; biscuit and confectionery workers had rather more employment, though short hours were still worked; cigar factories were very quiet, the former employees being either idle or engaged on other work; breweries were very quiet. The flour mill at ST. THOMAS had a quiet month, but the chocolate factory was fairly active. At WINDSOR bakers were well employed; brewery workers were idle for part of the month owing to a fire; soft drink plants were slack, some drivers being laid off. At OWEN SOUND the flour mills, bakeries and confectionery plants were normally active. WINNIPEG reported some signs of recovery in the abattoirs and meat packing houses, though employment was still slack; bakers and confectioners continued quiet, many skilled men working on short time; breweries and soft drink plants were normally active for the

season; vegetable canneries were slightly more active than in the preceding month. At BRANDON the creameries were busy and the flour mills and bakeries were fairly active, but breweries, soft drink and tobacco plants were slack. The flour mill at LETHBRIDGE worked one shift per day; brewery workers worked full time. At CALGARY flour and feed plants were quiet; bakers and confectioners were normally active, but breweries and soft drink plants were quiet. The meat packing and biscuit industries at EDMONTON were fairly steady. Dairies at FERNIE were busy, and brewery workers were well employed. VANCOUVER reported fair activity in the flour, feed and cereal mills, also in the sugar refinery, baking and confectionery plants, creameries and dairies; abattoirs and meat packing plants, breweries and soft drink factories were quiet, and canneries and tobacco plants very dull. At NEW WESTMINSTER brewery and cigar workers were active. VICTORIA reported activity in the flour and feed plants and breweries; bakers and confectionery, biscuit and candy workers were fairly well employed, but fruit and vegetable canners and cigar makers had a very dull month.

The rope factory at HALIFAX continued operating four days in the week.

**Textiles,
cordage and
carpets**

The woollen mills at AMHERST were still shut down, but were expected to resume work in March. At TRURO the woollen mills continued working 6 instead of 10 hours a day. Both cotton mills at ST. JOHN continued running on short time. At MONCTON the woollen, underwear and linen factories were still running but on a reduced schedule. The cotton mill at FREDERICTON also ran on short time. At MONTREAL woollen and knitting operatives were fairly well employed, with brightening prospects; tent makers were becoming more active. The cotton mills at QUEBEC were quiet owing to shortage of water power, though staffs were not reduced; tent, awning and sail plants were quiet. At SHERBROOKE the cotton, woollen, bleach-

ing, dyeing, finishing and printing textile plants were fairly active, but hosiery, underwear and knitted goods plants were quiet. ST. HYACINTHE reported only about one-third of the regular staff employed in the knitted goods and woollen factories; the cotton factory which had been closed for about two months was ready to resume work. At THREE RIVERS the cotton factory was less active than is usual at this season. Tent makers at OTTAWA and HULL were fairly busy. TORONTO reported woollen, hosiery and knitting factories fairly active, with prospects good, but the sweater departments were quiet; the carpet industry was dull, working with part staff and at half time; tent and awning factories continued quiet. At HAMILTON the knitting and cotton factories were very slack, but carpet makers were fairly active. At ST. CATHARINES silk and knitting operatives were well employed, while the woollen mills were rather quiet. The tent and awning industry at BROCKVILLE was fairly active. The textile plant at KINGSTON ran full time with 190 workers employed, with good prospects for continuance. PETERBOROUGH reported increased activity at the woollen factories, day and night shifts being worked at one plant; the worsted mill worked full time; the yarn mill closed down but was preparing to reopen on a reduced working schedule; the knitting mills ran with staffs reduced. At GALT the cotton and woollen mills continued busy, working full time in most departments; the silk mills worked only 4 days a week. Employment was fairly good at BRANTFORD in the underwear, hosiery and woollen blanket factories. At KITCHENER the knitting and felt industries were rather slack, but the twine factory ran full time. The cotton and woollen mills and carpet and rug plants at GUELPH were quiet; the hosiery and knitted goods factories were fairly active and linen operatives were well employed. Additional help was taken on at the textile factory at WOODSTOCK; the knitting factories were quiet in some departments, with prospects uncertain. At LONDON the hosiery and underwear

factories were busier than in the preceding month, working with full staffs, but on short hours. The knitting factory at ST. THOMAS was fairly active. Textile workers at OWEN SOUND had a quiet month. WINNIPEG reported that jute and bag plants were moderately active, but staffs were slightly reduced; the knitting mill and the tent and awning factories continued slack. At VANCOUVER the knitting, tent and awning factories were also reported slack. The cordage plant at NEW WESTMINSTER ran to capacity.

Ready made clothing workers at HALIFAX continued fairly well employed during February; steam laundries and dyeing and cleaning plants were about normal. The boot and shoe industry

at AMHERST was very dull, one plant, which employed about 150 workers, shutting down. The hat and cap factory at TRURO continued working a 6 hour instead of a 9½ hour shift, but the shirt factory worked steadily with capacity help, and with good prospects. At CHARLOTTETOWN laundry and shoe-workers were active, but garment makers and tailors were slack. Ready-made clothing workers at ST. JOHN had a slack month; laundries and dyeing plants were fairly active. Tailoring, dress-making and millinery establishments at MONCTON were fairly active; the cap factory ran on a reduced scale; steam laundries had a busy month. Garment workers were in demand at FREDERICTON; laundries and cleaning plants had a quiet month. At MONTREAL ready-made clothing and boot and shoe factories were increasingly active on spring orders and also in filling a large order from the Italian Government; hat, whitewear and laundry workers were only moderately active. The ready-made clothing trade at QUEBEC was very quiet, some plants being completely shut down, and others running with very few employees; hat, cap and fur plants and laundries were also quiet; the boot and shoe industry was very dull, none of the factories working

full handed or on full time. Fair conditions were noted at SHERBROOKE in the ready-made clothing, boot and shoe factories, and in laundries, cleaning and dyeing plants. ST. HYACINTHE reported slightly increased activity in the shoe factories, 8 hours a day being worked, but employment was irregular in some departments; the garment factories started on their work for the coming season, with good prospects; the corset factory worked 8 hours a day; laundry workers were well employed. At THREE RIVERS the boot and shoe industry was quiet; steam laundries, dyeing and cleaning plants were fairly busy. Clothing and shoe workers at SOREL had a good month. OTTAWA and HULL reported slightly more active conditions in the clothing industry, one firm running at about half its normal capacity, while another employed a quarter of its usual staff. At TORONTO tailoring and ready-made clothing, hat, cap and women's whitewear factories were active, though there was still considerable unemployment; overall, glove and neckwear plants were quiet; steam laundries and dyeing and cleaning establishments were busy; the boot and shoe industry continued quiet, but with some signs of improvement. The ready-made clothing trade at HAMILTON was very slack owing to an industrial dispute; whitewear workers were fairly well employed; the clothing trades at HAMILTON were quiet but laundries were busy. At ST. CATHARINES rubber foot wear workers had a good month, and laundries were very busy. The hat factory at BROCKVILLE ran with reduced staff, and the glove factory worked only 3 days a week; the fur workers were fairly well employed for the season; laundries, dyeing and cleaning plants were also fairly active; the boot and shoe industry was quiet. The staff was slightly reduced at the shirt factory at BELLEVILLE; laundries and cleaning plants were fairly active. At PETERBOROUGH women's whitewear and children's clothing factories were quiet. The clothing industry at GALT showed some improvement; the shoe factories still worked on short time in most departments, but with

signs of improvement. The shoe factories at BRANTFORD were rather quiet, though no workers were laid off; laundries and cleaning workers were well employed. At KITCHENER quiet conditions were noted in the robe, shirt, collar, and button factories; glove workers were fairly well employed; laundries were active but cleaning plants were rather quiet; the boot, shoe and rubber industries were dull, but felt slipper and canvas shoe factories were active. At GUELPH the women's whitewear and ready-made clothing industries were fairly active, but hat factories were quiet. Slack conditions were reported in the clothing factories at STRATFORD, but laundries were fairly busy. The men's clothing and hat factory at LONDON were slack, a number of workers being laid off; women's costume workers were increasingly active, though still on short time; staffs were increased in the boot and shoe plants. At St. THOMAS the shoe industry showed a marked improvement. The overall factory at WINDSOR reopened at the beginning of the month; the shirt factory employed a full staff; shoemakers were very busy. The whitewear factory at OWEN SOUND was quiet throughout the month. WINNIPEG reported staffs increased, though yet below normal, in the ready-to-wear factories; shirt factories were rather quiet though working full time, but with only three-fourths of their usual staff; the cap factory worked full time with about half the staff normally employed; glove and fur workers were very quiet; laundry workers were steadily engaged, and cleaners were better employed than in the preceding month. Laundries at CALGARY were normally active. The garment factory at EDMONTON which was closed for about three weeks in January, was nearly back to normal activity. At VANCOUVER the ready-made clothing industry was more active in the men's suit department, but the overall and shirt trade was very slack; women's wear, suits and cotton goods showed more activity; laundries and cleaning plants were rather quiet; the boot and

shoe industry was fairly active. At VICTORIA conditions were fairly good in the shirt and overall factories, and laundries were busy.

The pulp and paper industry in the Maritime Provinces continued to show signs of continued depression during February. The tarred and felt paper industry at

Pulp, paper and fibre

HALIFAX was quiet, but no employees were laid off. In Nova Scotia the pulp and paper mills at MURRAY and LIVERPOOL operated with reduced staffs. The pulp and paper mills at BATHURST, in New Brunswick, after closing for a time, resumed operations, but closed again owing to lack of orders. The mills at CHATHAM were idle, but at St. JOHN pulp and paper workers were steadily employed. In the Province of Quebec, staffs were increased in the pulp and paper mills at DONNACONA, CAP MAGDELAINE, CHANDLER, EAST ANGUS and KENOGAMI; employment was steady in the mills at BAGOTVILLE, LA TUQUE, CHICOUTIMI, SHAWINIGAN FALLS, while reductions were reported at WINDSOR MILLS and HULL; at the latter the newsprint mill remained closed but the wood board, tissue, book and wrapping paper plants were active. At THREE RIVERS the pulp and paper mills continued very quiet, only a small staff being retained for repair work. In Ontario slight increases were noted in the pulp and paper mills at SMOOTH ROCK FALLS, HAWKESBURY, IROQUOIS FALLS and OTTAWA; conditions were steady at THOROLD, STURGEON FALLS, TORONTO, St. CATHARINES and SAULT STE. MARIE, while staffs were slightly reduced at CORNWALL and ESPANOLA. The felt roofing industry at BRANTFORD was dull, but the employees were retained for work on repairs and alterations. Vancouver reported that the pulp and paper mills at POWELL RIVER, OCEAN FALLS, and elsewhere in the coast district had a busy month. The rubber roofing and fibre plants at VICTORIA was busy, running a night shift.

The printing and allied trades were active during the month at SYDNEY,

**Printing,
publishing
and paper
goods**

TRURO and AMHERST, but conditions at HALIFAX were less favourable, some job printers being laid off; paper box workers were steadily employed. At CHARLOTTETOWN printers were well employed. Job printers and binders were rather quiet at ST. JOHN. Activity was reported throughout the group at MONCTON and FREDERICTON. At MONTREAL printers, bookbinders and lithographers were rather less busy. QUEBEC reported activity in the printing trades, but paper box and bag workers were very quiet. Printers at SHERBROOKE and THREE RIVERS were fairly active, but binderies were quiet. At OTTAWA and HULL the printing and publishing trades continued quiet, except at the Printing Bureau, where activity prevails during the Parliamentary session. At TORONTO the printing and allied trades were fairly well employed; binders were partly on short time; paper box and bag workers were rather more active than in the preceding month. Some printers at HAMILTON were unemployed, but lithographers, engravers and binders were fairly active. Employment was reported steady in the printing and allied trades at NIAGARA FALLS, ST. CATHARINES, BROCKVILLE, KINGSTON, BELLEVILLE and PETERBOROUGH; paper box workers at the latter point were quiet. At GALT newspaper shops were busy, but job printers were slack. Active conditions were reported at BRANTFORD among printers and box makers. KITCHENER reported newspaper printers active but job shops were dull and paper box workers rather slack. At GUELPH, STRATFORD and WOODSTOCK the printing trades were fairly active. LONDON reported that some newspaper printers were still unemployed, though conditions were improving; job offices were fairly active; lithographers and paper box workers were slack, with a number of workers unemployed. Activity was noted at ST. THOMAS and WINDSOR at all print shops; at the latter point

the paper box industry was very quiet. A new lithographing plant opened at OWEN SOUND; the printers were busy there and also at ORILLIA. At WINNIPEG the printing industry had another very quiet month, with considerable unemployment, and paper box factories ran with slightly reduced staffs. Printers at BRANDON had an active month. At CALGARY and EDMONTON the printing and allied trades were fairly well employed. VANCOUVER and VICTORIA reported that printing and publishing plants, binderies, and paper box factories were rather quiet. Printers at NEW WESTMINSTER were well employed, but at PRINCE RUPERT they had a slack month.

A decline in activity was noted at SYDNEY in the sash and door factories and planing mills. At HALIFAX also this industry was quiet; the wooden box plant was

**Woodworking
and furniture**

normally active. Woodworkers at AMHERST continued steadily employed, except in the casket factory, which ran only four days a week. The mattress factory at TRURO ran full time, with capacity help. CHARLOTTETOWN reported quiet conditions in the sash, door and planing mills, but prospects were good for the spring season; broom and cooperage workers were active early in the month, slackening later. At ST. JOHN the sash, door and planing mills and the broom and brush factories ran steadily, but the wooden box plant worked only three days a week. The planing mills and cooperage at MONCTON operated steadily, the former on a reduced schedule. At FREDERICTON the sash, door and planing mills worked full time. MONTREAL reported the wooden box, furniture and piano industries fairly active. At QUEBEC the sash, door and planing mills were very dull, and the wooden box, furniture and broom factories were also quiet. The mills at SHERBROOKE and ST. HYACINTHE were fairly active; the chair factory at the former place was quiet. THREE RIVERS reported a busy month in the sash, door and planing mills. At OTTAWA and

HULL the planing mills worked on short time, and were generally slack; the furniture, piano and washing machine factories had a very quiet month; the broom factory resumed operations, but on a very small scale. TORONTO reported activity in the sash, door and planing mills; wooden box and furniture workers were fairly well employed, but piano and phonograph plants were quiet. At HAMILTON about one-fourth of the normal staffs at the woodworking plants were unemployed, the remainder working on short time. The woodworking trades were well employed at NIAGARA FALLS and ST. CATHARINES. At BELLEVILLE, the sash, door and planing mills were quiet and the furniture factory ran with reduced staff. Slack conditions were noted also at KINGSTON in the woodworking plants, but the piano industry showed some improvement. PETERBOROUGH reported a slight improvement in the sash, door and planing mills. At GALT the mills were fairly busy, and the furniture factory ran full time. The planing mills at BRANTFORD kept running though not busy. At KITCHENER the sash, door and planing mills, and the broom, wooden ware and wooden toy factories had a dull month; furniture, chair, piano and organ workers were on short time; interior hardwood, cooperage and wooden box factories were fairly active. At GUELPH and STRATFORD the planing mills were quiet, but piano and sewing machine workers at the former were fairly well employed. The furniture factory at WOODSTOCK resumed operations, with half the normal staff employed; the piano and organ industry was very slack. At LONDON the planing mills were reported busy; wooden box workers were fairly well employed and piano makers were increasingly active, but the cooperage plant was quiet. The planing mills at WINDSOR ran under pressure of work but the piano factory employed only half its usual force of workers. The woodworking trades at OWEN SOUND were very slack. ORILLIA reported some

increase of activity at the sawmills; furniture workers were rather slack, though one factory retained its normal staff. The sash and door factories at SAULT STE. MARIE had a dull month. At WINNIPEG the planing mill and box factories were running with reduced staffs; the sash and door factories were very quiet, with about one-fourth of their usual staffs on the unemployed list. BRANDON reported activity in the sash, door and planing mills. At FERNIE the sash and door factories were almost entirely inactive. VANCOUVER also reported general slackness in this industry in the Coast district, as well as in the wooden box and chair factories.

Trunk and bag makers at AMHERST had a dull month. The tannery at ST.

JOHN was reported busy, as were harness workers at FREDERICTON. At MONTREAL the tanneries, trunk, bag, harness and rubber factories were quiet. QUEBEC reported dullness in the factories, due, it was stated, to the fall in the price of hides. Tannery workers at ST. HYACINTHE were on short time. At TORONTO the trunk, harness, and rubber industries continued quiet. HAMILTON reported fair activity in trunk, leather goods and harness factories. Leather workers at BROCKVILLE had a quiet month. The tannery at KINGSTON resumed operations during the month and ran with a staff much below normal strength. A new rubber plant opened at BELLEVILLE during the month, with about 20 hands employed. Leather workers at PETERBOROUGH had a quiet month. Both the large tanneries at KITCHENER ran full time. At LONDON tannery workers were rather more active, but the harness and horse goods industry was slack. WINDSOR reported increased activity among harness and horse goods workers. Tannery workers at OWEN SOUND had a very quiet month. Tanneries and trunk and bag plants at BRANDON were fairly active. At CALGARY the trunk, bag, harness and horse goods trades were slack.

Leather and rubber (other than clothing)

The glass factories at MONTREAL continued in steady operation. At QUEBEC stone cutters and brick makers were slack. SHERBROOKE reported quiet conditions in the cut stone, granite and brick yards. At THREE RIVERS artificial stone workers were well employed. TORONTO reported brick makers fairly active in anticipation of a busy building season; the glass trade was quiet, except in the making of electric light bulbs. The brickyards at HAMILTON still remained closed, but pottery and sewer pipe plants were running with about half their usual staffs. At BROCKVILLE little stone work was in progress and the brickyards were quiet. The glass and moulding factory at KINGSTON reopened during the month with about 20 workers employed. At BELLEVILLE the brickyards were fairly active in anticipation of the building season; the cement plant continued to run at considerable pressure. At KITCHENER dullness was noted among stone-cutters and workers in granite, brick, tile, sewer pipe and cement. The cut stone plant at LONDON was reported very busy, with all employees on full time. At VICTORIA the brick and tile yards were quiet, but cement plants were fairly active.

Chemical product plants at SYDNEY continued to show a decline in activity.

At HALIFAX the oil refinery ran with about two-thirds of its normal staff employed. The paint and varnish industry at MONTREAL was rather quiet, but chemical, drug and medicine plants were active. At QUEBEC the soap and cartridge factories were slack. At SHERBROOKE the lubricating oil and grease, gun powder, and acid, extract and medicine plants were all reported quiet. The paint factories near THREE RIVERS were also rather slack. At TORONTO the paint and varnish industry was active. The drug and chemical industries at HAMILTON were fairly active, but soap and toilet plants ran with about half their usual staffs. Electro-chemical

workers at NIAGARA FALLS had greatly reduced employment, one large plant closing down. The oil, grease and glue plants at KITCHENER were moderately active. The salt refinery and the pharmaceutical plants at WINDSOR slightly increased their staffs during the month; paint factories were quiet. Paint and oil workers at OWEN SOUND had a very quiet month. VANCOUVER reported the local oil refinery fairly busy, but the paint and varnish industry was very quiet. At VICTORIA paint and soap factories and explosive plants were fairly active.

The gross earnings of the Canadian Pacific Railway in January were \$14,465,430, as compared with \$13,914,569 in January, 1920. The gross earnings of the Canadian National Railways in February were \$8,170,251, as compared with \$6,516,059 in the corresponding period of last year. During February the number of persons employed by the Canadian Pacific, Grand Trunk and Canadian National Railways in railway operation, including general offices, trainmen and engine crews, station employees, sleeping, dining and parlor car employees showed a reduction of about 3,600 persons. This reduction was spread more or less evenly over the whole month and was divided between the Canadian Pacific and Canadian National Railways.

At SYDNEY steam railway, navigation and 'longshore work continued during February to show less than normal activity; the street railway employed extra workers in connection with the snowfall. HALIFAX reported 'longshore work exceptionally light although many vessels were in port; street railways were fairly active. CHARLOTTETOWN reported slackness during the month in railway transportation. At ST. JOHN navigation and 'longshore work was good, although outward and inward cargoes were both light; the railways were increasingly active, with freights tending to increase; street railways were unfavourably affected by increased

Clay, glass,
stone, cement,
etc.

Railways,
shipping and
longshore work

Paints, oils,
chemicals,
explosives

rates, service being cut down; transfers showed increased activity. At MONCTON freight and passenger traffic were both reported slacker, fewer trains being operated and special crews in less demand; express and transfer workers were busy. At MONTREAL a continued decline was noted in activity on the railways. QUEBEC reported several local trains cancelled at the end of the month; passenger and freight traffic were both light; electric railways were also rather quiet; transfers and garages were dull, as usual in the season when navigation is dormant. At SHERBROOKE steam and electric railways were both quiet, but transfers and garages were fairly active. Transportation workers at THREE RIVERS were quieter than usual. At TORONTO the steam railways laid off a considerable number of men during the month, the absence of snow making operating conditions more easy; street railway men had steady employment, but liveries and garages were quiet. At HAMILTON the steam railways were all slack, extra men being laid off; electric railways and transfers were active; 'longshoremen were without work. Railway freight traffic at NIAGARA FALLS was reported heavy and at ST. CATHARINES employment continued good. BROCKVILLE reported increased activity on the railways; transfers and garages were fairly active. At BELLEVILLE passenger and freight traffic was reported brisk. Activity was also noted on the steam and electric roads at GALT and BRANTFORD. At KITCHENER railwaymen were much less active, but street car and transfer men were well employed. At LONDON staffs were reduced on both the Grand Trunk and Canadian Pacific systems. At ST. THOMAS railway traffic was less active, regular employees not making full time, and no extra men being required. Transportation was reported active in its various branches at WINDSOR. At OWEN SOUND conditions were quiet. WINNIPEG reported employment steady in the transportation group. At BRANDON railwaymen were fairly active; street car work was dull, but transfers were busy. At CALGARY railway and

other transport workers were very quiet. VANCOUVER reported quiet conditions on the steam railways, but electric car lines were fairly busy; navigation and 'longshore work was not heavy, cargoes being generally light; transfers and garages were slack. 'Longshoremen at PRINCE RUPERT had a quiet month. At VICTORIA transportation of all kinds was reported quiet, 'longshore work being very slack.

Stone quarrying in QUEBEC district was very dull, as usual at this season.

At SHERBROOKE the asbestos industry was fairly active; the gravel pits were also active, but granite quarries were quiet. Artificial stone

workers at THREE RIVERS were well employed. At THETFORD MINES from 300 to 400 asbestos miners continued idle in consequence of one mine ceasing operations. BELLEVILLE reported that the local cement plant had a busy month with some overtime and night work. At SUDBURY there was some demand for labour for the nickel mines. From COBALT 12 cars were shipped during the month containing 900,772 pounds of silver ore; this compares with 9 cars containing approximately 665,028 pounds of ore in the previous month; four shipments of bullion were made, consisting of 309 bars, or 401,110 ounces (no bullion shipments were made in the previous month). The brickyards at ESTEVAN were still inactive. At FERNIE metalliferous mining continued quiet. The mines at ROSSLAND ran as usual supplying the greater part of the tonnage consumed by the smelter at TRAIL; this smelter continued operating with one copper and two lead furnaces in blast; the lead, zinc, silver and copper refineries ran as usual, the output of the latter being about 8 tons daily; the concentrator worked to full capacity. The mining camps at STEWART were active, a large force being employed, and several thousand tons of ore shipped for smelting. Conditions at ANYOX were reported dull.

The coal mining industry of Nova Scotia continued to experience the effects of trade depression, working time at

Mining (Coal) the mines being frequently broken during the month. SYDNEY reported the output of the Dominion collieries as 225,000 tons, compared with 256,480 (revised figure) in the previous month. At SYDNEY MINES the Nova Scotia collieries produced 45,000 tons, the decline from the preceding month of 8,500 tons being attributed to the shorter month and heavy snowstorms. In New Brunswick the coal mines at MINTO had a slack month. The mines in the coal fields of the Prairie Provinces continued quiet. DRUMHELLER reported many mines closed and others working on short time. At LETHBRIDGE the miners were on half time, or worked 2 or 3 days a week. CALGARY reported the Alberta mines very quiet. At FERNIE an improvement was reported in the bituminous area, five shifts a week being worked in the last half of the month. NANAIMO reported that the coal mines on Vancouver Island were working mostly on short time.

The value of building permits in 56 cities during January amounted to \$2,372,512, as compared with \$4,654,479 in December. During February the building trades

Building and construction at SYDNEY and HALIFAX were less active, many workers being unemployed. At TRURO carpenters and painters were fairly active. No outside work was in progress at CHARLOTTETOWN. ST. JOHN reported the Courtenay Bay dredging operations still in progress. At MONCTON and BATHURST building was very quiet. MONTREAL reported the building

trades fairly well employed, with good prospects for the coming season. At QUEBEC conditions were still dull. Paperhangers at ST. HYACINTHE were busy. The building trades at THREE RIVERS, ST. JOHN'S and IBERVILLE were slightly more active. Electricians at SOREL were well employed, but carpenters and bricklayers were quiet. At OTTAWA and HULL about three-fourths of the building workers were unemployed. TORONTO reported building practically at a standstill, most of the outstanding contracts having been completed and little new work begun; employment was generally confined to a small percentage of inside workers; builders were disposed to delay actual operation until the cost of building materials should become more stabilized. At HAMILTON also the building industry was dormant, the amount of future work depending, it was said, on a reduction in the cost of materials. NIAGARA FALLS reported that over 6,000 men were at work on the canal and power house of the Ontario Hydro-Electric Commission, this work to be pushed at high pressure so as to permit partial operation of the new development early next fall. At CRYSTAL BEACH 100 men were engaged in construction of a new dock. ST. CATHARINES reported progress in the construction of the Welland ship canal, with employment good on sections 1, 2 and 3. The building trades were quiet at BROCKVILLE and KINGSTON. At BELLEVILLE a small amount of construction work was in progress. PETERBOROUGH reported a number of men at work on bridge construction and at the first stage of building a dam for the new power plant, while the municipality provided some employment on local improvements. At GALT, BRANTFORD, KITCHENER and GUELPH the city au-

thorities relieved unemployment by providing special work; building was still quiet, but much work was being planned. STRATFORD reported building at a standstill, and at WOODSTOCK many workers in the building trades, especially woodworkers, were unemployed. At LONDON very little building construction was in progress; the municipality provided employment on sewer work. At WINDSOR some slight activity was noted on public buildings. At SAULT STE. MARIE little construction was in progress. WINNIPEG reported the building trades very quiet, with a large number of skilled mechanics unemployed. A fair amount of new work was under way at BRANDON, but at REGINA, MOOSE JAW, LETHBRIDGE and CALGARY conditions were very quiet. At EDMONTON the building trades were reported fairly active. NELSON and TRAIL reported some minor building work in progress. At VANCOUVER very little private or commercial building was in progress; about 2,600 men were engaged in city "relief work". At VICTORIA also a considerable number of men were employed in civic work. At PRINCE RUPERT construction work on the new ocean docks was begun; but the building trades were generally quiet.

Railway construction employment, including maintenance of way showed a further decline during the month of February, the Canadian Pacific, Grand Trunk and Canadian National railways reporting 2,300 less persons on their payrolls at the end of the month than at the end of January. This reduction took place during the last two weeks of the month and was nearly all accounted for by reduced Canadian National Railway staffs.

The logging industry in the Maritime Provinces showed signs of curtailed activity in February.

Lumbering CHARLOTTETOWN reported that lumbering operations were hampered during the first week by deep snow, but full activity was resumed later. BATHURST reported logging practically closed, fine weather having favoured the completion of the season's work. QUEBEC also reported that the men were beginning to come out of the woods, the logging camps having made a short season, with pay considerably reduced. In the district of SHERBROOKE fair activity was noted in the tie and pole camps and at the saw and shingle mills. The sawmills at SOREL were active. Many logging camps in Ontario completed their season and closed down towards the close of the month, while others were curtailing operations in view of a probable break in the weather. In the district of PORT ARTHUR and FORT WILLIAM the camps were very busy throughout the month, with all classes of labour in demand. EDMONTON reported some signs of revival in the lumber mills after a long period of depression. Conditions in the lumbering industry at FERNIE, though slightly improving, were still unsatisfactory; in some cases mills opened, but with reduced staffs and irregular time; it was anticipated that the large mills would not be in full operation for some time on account of recent slackness in logging. The pole camps in the district of NELSON and TRAIL were active. The sawmill at SLOCAN started operations. VANCOUVER reported that a few camps in the Coast district opened during the month, but lumbering had not yet started; saw and shingle mills were slack. Two large mills at NEW WESTMINSTER remained closed, while two others ran with working forces reduced, mill workers having very little to do during the month. VICTORIA and NANAIMO reported logging and lumbering on Vancouver Island as still dull, though some mills were completing orders on hand.

INDUSTRIAL DISPUTES INVESTIGATION ACT, 1907

PROCEEDINGS FOR THE MONTH OF FEBRUARY 1920, WITH TEXT OF BOARDS' REPORTS

DURING the month of February the Department received reports from two Boards of Conciliation and Investigation established to deal with disputes between (1) various mining companies operating in the Edmonton District and their employees, being members of Local Union No. 4070 United Mine Workers of America, and (2) the Canadian Express Company, lines in Canada, and certain of its employees, being wagonmen, porters, clerks and messengers, members of the Canadian Brotherhood of Railroad Employees. Two applications were received for the establishment of Boards, and, in connection with an application which had been received during January, consent to the establishment of a Board was declined by the Company concerned.

The Department also received further advice concerning the reports of the Board established to deal with the dispute between the Canadian National Railways and its employees.

Applications Received

During the month of February applications for the establishment of Boards were received as follows:

(1) From the employees of the Algoma Steel Corporation, Limited, Sault Ste. Marie, Ont., being members of Local No. 697, International Steam and Operating Engineers. In this case the disputants were advised that joint consent to Board reference would be necessary, as the industry concerned was not one which fell within the scope of the Industrial Disputes Investigation Act. This consent was declined by the company.

(2) From the employees of various mills and mines under the jurisdiction of the Temiskaming Mine Managers' Association, Cobalt, Ont., being miners,

millmen, etc. At the close of the month this application was under consideration.

Other Proceedings under the Act

During the month of February advice was received from the management of the Dominion Iron and Steel Company, Limited, Sydney, N.S., that in view of existing conditions in the steel industry no useful purpose would be served by the establishment of a Board of Conciliation and Investigation to deal with the dispute with their steel workers. Since, in this industry a Board could be established only by mutual consent, and the company did not concur in the application, the Minister was without authority to establish a Board.

Re dispute between Canadian National Railways, all lines, and its employees, all classes

During February word was received as to the attitude of the employer and workers respectively to the findings of the Board of Conciliation and Investigation established to deal with the dispute between the Canadian National Railways, all lines, and its employees, all classes. The Board was composed as follows: Messrs. J. M. Godfrey, Toronto, chairman, F. H. McGuigan, Toronto, and David Campbell, Winnipeg. The workers accept the findings of the Board on all points, but the employer refuses to modify the order which had been the cause of difference, though undertaking to reinstate the former employees who had been dismissed for infringing the same, thus accepting in effect the unanimous recommendations of the Board on this point. The texts of the communications received in this connection are as follows:

(Telegram.)

Winnipeg, Man., Feb. 12, 1921.

F. A. Acland,
Deputy Minister of Labour,
Ottawa.

Your wire date re C. N. R. dispute. Owing to fact that employees' representatives scattered over such a wide territory, considerable delay experienced in ascertaining their attitude on findings of Board of Conciliation, but, as the unanimous finding on questions one, two and three recommends reinstatement of the three men involved without loss of seniority and with pay for time lost by reason of their dismissal and as the majority report of Board recommends the acceptance of proposal made to Board by the employees' committee in connection with question number four, I will take responsibility for stating that the unanimous findings on questions one, two and three and the majority finding on question number four are acceptable to the employees. This has the approval of such representatives as I have been able to get in touch with. We will be glad to receive advice as soon as possible concerning attitude of C. N. R. management so that arrangements can be made if necessary to get employees' committee together for purpose of taking further definite action.

(Sgd.) H. E. BARKER.

(Chairman, Co-operative Committee,
C. N. R. Employees.)

Canadian National Railways,

Toronto, Ont., February 11th, 1921.

F. A. Acland, Esq.,
Deputy Minister of Labour and Registrar,
Ottawa, Ont.

Dear Sir,—Further to my letter of the 4th inst., which acknowledged receipt of the reports of the Board of Conciliation which you sent me with your letter of February 1st. Summarized these were:

Unanimous Report.—Reviewing the case in considerable detail and recommending the reinstatement of the three men directly affected, on the ground that they were not fully informed as to the policy of the management in respect to political candidatures.

Majority Report.—recommending the proposal made by the employees that an employee be given leave of absence to become

a political candidate with the sanction of the company's officials and the committee of his fellow employees only in such cases where it can be shown that the service of the railway would not be embarrassed by his aspirations for political preferment.

Minority Report.—sustaining the right of the railways to declare the policy in question and recommending that the matter be decided by Parliament, and if necessary finally disposed of by special legislation.

The Board of Directors at its meeting yesterday gave careful consideration to these reports, and while not accepting any one of them, desires to point out that both the majority and minority reports find that the granting of leave of absence for political purposes is a question that rests with the management, the majority report stating "the management may refuse leave of absence for proper cause if in its opinion it would be against the interest of the railroad," and the minority report states (referring to cases on other railways) that "it was shown in each case that it was by special arrangement, unsupported by any rule or schedule obligations on the part of the railway."

The Board of Directors has felt all along that it was quite within its rights in deciding to withhold leave of absence to enable employees to become candidates for election or to serve as members of Parliament. Its position is now supported by findings of fact by both the majority and minority reports.

In view of the above, the acceptance of the men's proposal would be merely agreement on the part of the management that cases might arise where the policy laid down be departed from. This would be leaving open the very door it is desired to keep shut.

The Board of Directors, with a desire to do justice to the individual employees affected, is prepared to reinstate in the service with wages for lost time the two employees, Messrs. Palmer and Moore, who were elected to the Manitoba Legislature, and Mr. Higgins, the employee from Leaside Shops. It will require investigation to see just what actual loss has been sustained. The directors will also authorize the management to grant leave of absence without pay to the two first mentioned employees to attend their Parliamentary duties during the life of the present Legislature.

The management is prepared to take this step in view of the contention made by the men that the individual employees concerned had acted in ignorance of the views of the management on this question, and that a semblance of official approval had been given to their political candidature by the fact that they had been granted leave of absence with the knowledge of officers that they were to be candidates in the elections. The manage-

ment, however, is only prepared to take this action upon the distinct understanding that the question of policy involved is not in any way affected. The management merely withdraws its retroactive effect in so far as these three men are concerned.

That there may be no misunderstanding let me again re-affirm our position that no employee can continue in the service and accept

nomination from any political party Federal or Provincial. This is the policy laid down by the directors in this matter and our officers will be advised accordingly.

Yours very truly,

(Sgd.) D. B. HANNA,
President.

Report of Board in dispute between various mining companies operating in the Edmonton District and their employees

A REPORT was received from the Board established to deal with the dispute between various mining companies operating in the Edmonton District and their employees, being members of Local Union No. 4070, United Mine Workers of America. The employees concerned were on strike but resumed work on the understanding that a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act would be established. In this case there being several employing companies involved it was necessary for them to unite in making a recommendation for a Board member and the companies having failed to make a recommendation, a Board member for the employing companies was appointed by the Minister, as required by the statute, without recommendation, the Board being constituted as follows: Messrs. C. D. Fisher, Saskatoon, chairman, Mayne Reid, Edmonton, and R. Livett, Calgary. The report was signed by the chairman and Mr. Livett and contained recommendations as to certain changes in wages and conditions. Mr. Reid presented a minority report.

Report of Board

In the matter of the Industrial Disputes Investigation Act, 1907, and of a dispute between various Mining companies operating in the Edmonton District and their employees.

The Hon. G. D. Robertson,
Minister of Labour,
Ottawa.

The Board consisting of C. D. Fisher, Chairman, Mayne Reid, representing the mine owners, and Robert Livett, representing the workers, members of United Mine Workers of America, Local Union No. 4070, met in the District Court House at 2.30 p.m. Monday, January 10th, 1921.

All members duly sworn on the prescribed forms which I enclose.

Matters were fully discussed and it was decided in order to function as a Board of Conciliation, to call the mine operators and their employees together for an informal discussion of affairs at a time convenient for the operators. This meeting took place at 2.30 p.m. Tuesday, January 11th, 1921, the result of which showed very little progress in the matter. An adjournment was made until 10.30 a.m. Wednesday, January 12th, to take evidence, the Board sitting in the banquet room at the Macdonald Hotel, Edmonton. Several witnesses were examined and the investigation was completed Friday, January 21st.

In the application for appointment of a Board of Conciliation, the following mines were mentioned:

The Humberstone Coal Company Ltd.
Great West Coal Company Ltd.
Marquis Collieries Ltd.
Fraser-Mackay Collieries Ltd.
Edmonton Collieries Ltd.
Dawson Coal Company.
Clover Bar Coal Company.

The last two companies named were not represented, Mr. Reid stating that the managers showed no desire to appear, being among the smaller class of mines.

The employees, under Local No. 4070, United Mine Workers of America, were duly represented.

The following causes of dispute including claims and demands by either party upon the other are as follows:

1. The applicants desire that a contract signed by the officers of the Union on behalf of the employees shall be made with the employers and take the place of existing individual contracts.
2. The applicants for a Board claim that they are entitled to be paid at rates of pay equivalent to the rates paid in other coal fields, particularly the Drumheller Field.
3. The employees claim that the conditions of work as to dead work, timbering, coal supply and general welfare should be brought up to the standards in their other coal fields, especially the Drumheller Coal Field.
4. The applicants also wish an agreement with the employers to the effect that there will be no discrimination by the employer against any member of the Union because of any past dispute.

The award of a majority is as follows:

Clause 1. After considerable evidence had been attained, miners stating that almost 100 per cent of the miners are members of the Union, this being discredited by some of the mine owners stating that a large number of their employees were not members of any Union, we are of the opinion that a more contented condition of affairs would exist among the miners if the United Mine Workers of America were

permitted to contract. This is a day of co-operation and it is fully realized by the majority of people that united efforts in making better citizenship is preferable to the individualistic effort. This applies to the signing of contracts. One of the mine managers stated "I have seen the time when it was a pleasure to work with the United Mine Workers of America, and I carried on one of the biggest mines in Western Canada, but the last three or four years I have changed my opinion a little bit and it was due to men being allowed to break their contract."

I am of the opinion that contracts properly entered into between the mine owners and United Mine Workers of America will be faithfully lived up to.

In two instances, viz.: The Humberstone Coal Company Limited and the Edmonton Collieries, they produced evidence where individual contracts had been made with their employees, and, to lay stress upon the seriousness of observing contracts when made, these contracts have been duly observed later on in this award.

Clauses 2 and 3.—After considerable evidence had been taken as to the wages paid in the different mines there appeared to be considerable difficulties to men doing the same work in different mines and in view of the fact of the mild weather which has materially decreased the output of the mines and the large number of unemployed throughout the country and the cost of living slightly decreasing, it was considered that the best method is to standardize the wages in the Edmonton Field and the following list of wages is herewith submitted:

	Per 8 hrs.
Blacksmiths	\$6.80
Blacksmith's helper	5.36
Carpenters ..	6.80
Carpenter's helper	5.36
Engineer (Power House)	6.50
Hoisting, incline boxcar loader.....	6.25
Firemen ..	5.36
Box car shoveller	5.36
Surface labourer	5.00

Underground—

Mining on company work	6.90
Drivers ..	6.55
Track layers	6.90
Pushers ..	6.25
Labour, not classified	6.25
Machine runner	7.32
Machine helper	6.90
Timber men	6.90

Any other classification not mentioned to be based on same proportionate rates according to work done.

The above rates to become effective February 1st, 1921, with the exception of the Edmonton Collieries Limited and the Humberstone Coal Company Limited, rates effective in these mines at the expiration of their contracts, viz.: May 31st, 1921, and June 23rd, 1921, respectively.

These rates are not in excess of wages now being paid in Edmonton Field but it is a standardization which will, no doubt, create better relations among the men.

Mr. Robert Livett, representing the men, maintains there is still too great a differential in wages between the Edmonton Field and the Drumheller Field for men doing the same class of work, but agrees to the foregoing schedule of wages in order to make a majority report of this Board.

Clause 4.—Some evidence was given regarding one of the mines discriminating against employees after the strike in not giving them their old positions back, but in four instances it was shown that the men complaining were receiving more wages in their new positions, only one employee receiving less and the mine manager consented to re-employ this man at the first opportunity, but it is not considered that there will be any trouble regarding this clause when agreements are duly signed.

(Sgd.) C. D. FISHER,
Chairman of the Board.

(Sgd.) R. LIVETT,
Representing Local No. 4070
United Mine Workers of America.

Edmonton, Alta.,
January 21st, 1921.

Minority Report

In the matter of the Industrial Disputes Investigation Act, 1907, and of a difference between various mining companies operating in the Edmonton district and their employees being members of Local 4070, U. M. W. of A.

To the Minister of Labour,
Ottawa Ont.

Sir,

I have to report that the Board of Conciliation appointed by you has now completed its investigation of this matter. Mr. Robert Livett, International Board Member of the United Mine Workers of America, was appointed a member of the Board on the recommendation of the employees, and I was appointed by you as a member in the absence of a nomination by the employers.

Mr. Livett and myself had several meetings with a view to appointing a chairman, but we were unable to agree. I took the stand that the appointee should be a party resident in the Edmonton district and familiar with the conditions existing there, but Mr. Livett contended that the chairman should be a man chosen from a locality outside the Edmonton district. On the matter being referred to you, you saw fit to adopt Mr. Livett's point of view, and to appoint Mr. C. D. Fisher of Saskatoon as Chairman of the Board.

The Board first called an informal meeting of the employers and of the representatives of the employees, to ascertain whether it would be possible to arrange a settlement without proceeding to the hearing of witnesses. A free discussion developed, but no results were obtained and the Board had therefore to proceed with the hearing of the evidence presented to it.

A large number of witnesses testified on behalf of both the applicants and the employers, and the Board was addressed by representatives of the applicants, and of some of the employers.

The Board continued in session from 10th till 21st January, 1921. The sittings were all open to the public and the press. At the conclusion of the hearing, the members of the Board had a conference in private. It was found, however, that our views did not coincide, or at least that my views did not coincide with the views of either of the other two members of the Board, and I am therefore under the necessity of making an independent report.

The following facts were established:

THE CLOVER BAR AND EDMONTON COAL FIELDS.

The Clover Bar and Edmonton Coal Fields embrace the mines lying within the city of Edmonton and to the east and south-east thereof. There are, in all, in this field fifteen mines, but only seven of the operators of these mines are named in this application. The application does not deal with the other eight. The coal mined in this district is a lignite coal used practically entirely for domestic purposes. In quality it is inferior to the coal mined in the Drumheller field, having about six per cent higher of moisture content, which not only renders it inferior as a fuel, but also causes it to deteriorate more rapidly on exposure to the air.

From the operators' point of view, conditions for mining in the Edmonton and Clover Bar fields are not so good as they are in the Drumheller field. The seam is much thicker in the Drumheller field than in the Edmonton and Clover Bar fields. On the other hand from the employees' point of view, the Edmonton and Clover Bar fields are more desirable than the Drumheller field. One of the witnesses selected by the employees testified that the cost of clothing and food is lower in the former, and that the facilities for obtaining work in the summer are much better on account of the proximity to the city of Edmonton.

OTHER NEIGHBOURING COAL FIELDS.

There are several other coal fields in the neighbourhood of Edmonton, viz.:

Cardiff, with three mines, situated about twenty miles north; Sturgeon, with three mines, situated about fourteen miles north; and Tofield, with three mines, situated about fifty miles east.

The coal in all of these fields is of an inferior quality to that mined in the Edmonton and Clover Bar fields, but mining conditions are much better, and the result is that the coal can under-sell the Edmonton and Clover Bar coals, even in the city of Edmonton, by 50 cents to \$1.00 per ton. Tofield coal is a stripping proposition; that is to say, the over-burden is removed by steam shovels in the summer time, and the coal mined in the open in the winter. It was shown that the proposition is such a simple one that lump coal can be loaded on the railway cars at Tofield for \$1.00 per ton.

CIRCUMSTANCES LEADING UP TO THE TROUBLE.

At various times during the war increases of wages were granted to the mining employees at all the mines in the Edmonton and Clover Bar fields, and in the month of June, 1920, all of the employers in these fields increased the wages in their mines by thirteen per cent over the then existing wages. At the time of giving this increase two of the companies involved in this application, viz.: The Humberstone Coal Company Ltd., and the Edmonton Collieries Ltd., entered into written contracts with their employees that these increased wages should remain in effect for one year thereafter. The Bush Mine Coal Company, which is not, however, involved in this application, also made a written contract with its employees for one year under which the company agreed to pay an increase in wages corresponding to any increase which might be granted by the employers in the Drumheller field. The employers in the Drumheller field granted an increase of \$1.15 per day on all day rates both above and below ground, which increase became effective on 25th October, 1920. Following on the granting of this in-

crease the Bush Mine Coal Company agreed to pay its men on day rates a corresponding increase of \$1.15 per day; but none of the other fourteen companies in these fields granted the increase. No corresponding increase was given in any of the other neighbouring fields.

THE STRIKE AT THE HUMBERSTONE MINE.

Notwithstanding their written contract, the employees of the Humberstone Coal Company Ltd., on 8th November, 1920, demanded that that company pay the same rates as were then being paid in the Drumbeller district. The company refused to accede to this demand. The company had entered into a large number of contracts for the sale of its coal deliverable at future dates at fixed prices. These prices were based on the scale of wages set out in the written contract entered into in the month of June, 1920, between the company and its employees. On November 20th the employees at this mine declared a strike, and placed pickets at the gates of the property. On November 22nd, the strike being still in existence, the company wired you (The Minister of Labour) asking that a Board of Conciliation be appointed; but a wire was received in reply intimating that you refused to constitute a Board on the ground that the men were on strike. The company thereupon intimated to its employees by notice and by advertisement in the public press that it would restart work on November 29th, and that any men not reporting for work on that day would be considered as having ceased to be employees of the company and that the company would hold itself at liberty to engage other men to take their places. Some of the men came back to work and other new men were also taken on, with the result that the mine was again placed in operation.

THE SPREAD OF THE STRIKE.

In the meantime the strike spread to six of the other mines. A strong picket had been organized and it visited these

mines at different times. It was clearly shown in evidence that this picket pulled out the employees of the Marcus Collieries Ltd. The picket to the strength of about one hundred men, also visited the mines of the Fraser-Mackay Collieries Limited and the Great West Coal Company Ltd. According to the evidence of both the manager of the latter company and one of the applicant's witnesses, a former employee, it prevented the employees of that company from going to work. Both witnesses stated clearly that the men desired to work but that they were prevented from doing so by the strength of the picket. Mr. Bolton, the witness, brought forward by the men, stated that the "social stigma" attached to the employees who desired to work compelled them to join the ranks of the strikers. The organization of a Local, No. 4070, of the United Mine Workers of America, was then proceeded with.

RESUMPTION OF WORK.

In the meantime Mr. Rigg, an employee of the Department of Labour, appeared on the scene. Mr. Rigg interviewed the various employers and got them to agree to re-open the mines and to reinstate the workers on the understanding that there would be no discrimination against any employee who had been on strike. The only qualification to this agreement was that the Humberstone Coal Company Limited refused to dismiss any men who had been taken on by it during the strike, but they indicated that they were willing to reinstate all old employees as and when vacancies might occur. Work was accordingly resumed at all the mines on or about 4th December.

THE APPLICATION FOR THE CONCILIATION BOARD.

Thereafter an application was made for the appointment of a Conciliation Board to deal with the matter and this Board was constituted. The application is signed by Dennis Gildea and L. W.

Ferguson, two of the employees of the Edmonton Collieries Ltd. They are respectively the President and Secretary of the newly constituted local of the U. M. W. of A.

In the application it is stated that the men made demands on the employers, but that these had been persistently refused, and that the Mayor of Edmonton had endeavoured to arrange a meeting of the employers and representatives of the employees for the purpose of adjusting the differences if possible, but that the employers had refused to discuss the matter. I find that the applicants have failed to establish that in any of the mines demands were made for all of the claims set forth in the application, and that in some of the mines affected any demands were made at all. Further, there is no evidence that the employers were asked by the Mayor of Edmonton to meet the men or that they refused to do so.

Objections were laid by certain of the employers to the application on the following grounds:

(1) That it was clearly established that in some of the mines all of the employees were not members of the U. M. W. of A. and that the parties signing the application were not employees of the mine affected, as required by section 16 (e) of the Act;

(2) That there was no proper authorization of the application under section 16 (d) as there was no evidence of the giving of three days clear notice to all the employees affected.

In my view, there is much to be said for both of these objections, but they are overruled by section 6 (2) of the Act which provides that the decision of the Minister as to the granting or refusal of a Board shall be final.

THE EMPLOYEES' DEMANDS.

The first demand of the applicants is that they desire that a contract signed by the officials of the union on behalf of the employees shall be made with the employers, which shall take the place of existing individual contracts.

Practically no evidence was submitted of the desire of the workers in any of

the mines for the recognition of the union, though apparently 300 to 350 men attended the organization meeting. Indeed, no witnesses were called from among the large number of employees now working for the Humberstone Coal Company Ltd., the Great West Coal Company Ltd., and the Dawson Coal Company Ltd. On the contrary, the Humberstone Coal Company Ltd., submitted a list in evidence containing the signatures of eighty-eight employees of that company, who declared that they were not members of the Union, and did not desire to join it. At the time of submission of these lists, the manager of the Humberstone Coal Company Ltd., applied to the Board for subpoenas to have some of these men brought before the Board to testify on the subject, but that application was refused.

Mr. Gildea, the President of Local 4070, U. M. W. of A., stated that he had signed the contract with his employers, the Edmonton Collieries Limited, that such contract was for a period which will not end till 1st June, 1921, but that he did not consider himself bound by this contract, although he had read it over and fully understood it before signing. Mr. Ferguson, the Secretary of the Local, had not signed this contract, but stated that in any case he did not consider that it was binding on the men who had signed it.

Mr. James C. Dunn, President of the Great West Coal Company Ltd., stated that in a conversation which he had with Mr. Ryan, an organizer of the U. M. W. of A., Mr. Ryan had stated "your coal is competing in the Winnipeg market, and we are going to put a stop to that. We are determined to organize this field even if it costs \$50,000.00." Mr. Ryan denied that he made that statement, but admitted that he did not remember all that was said. He also denied the statement attributed to him by Mr. J. R. McDonald, Manager of the Humberstone Coal Company Limited, that if the Humberstone Coal Company Limited did not comply with the demand of the men he would shut this

mine up in forty-eight hours. The evidence of Mr. Dunn and Mr. McDonald was given in a thoroughly straight-forward manner and I accept their evidence as to Mr. Ryan's statements as the correct versions of what was said,—more particularly in view of his admission as to his memory. It is significant that the questions put by the men's representatives to the employers' witnesses as to markets were largely directed to the condition of affairs existing in the Winnipeg market.

WAGES PAID IN THE FIELD.

The second claim of the applicants is that they are entitled to be paid at rates of pay equivalent to the rates paid in the other fields, particularly the Drumheller field. In order that one may understand the situation, I am giving a list of the wages actually paid in the Edmonton and Clover Bar mines, so far as these were proved by evidence before the Board. These statements do not contain any imaginary figures, but are the actual wages which have been paid. It must be kept in mind in all questions regarding wages that the trade of the Edmonton and Clover Bar fields is entirely a seasonal trade, the busy season being confined to the winter months. One or two of the mines operate on a small scale in the summer time to supply a limited amount of coal for steam purposes in the local market. Only a few of the workers therefore are employed in this class of employment over the whole year. The great majority work in the mines in the winter time, and seek employment, either on farms or in the city of Edmonton in the summer, and many of them are homesteaders who have either proved up or are proving up their homesteads. Many of the employees engaged in the mines in the winter are therefore novices, or at best unskilled workers, and they naturally cannot expect to make as large wages as men who devote their whole time to the occupation of mining. It will be seen a distinction is drawn between con-

tract workers and day workers. The former are miners who are paid on the basis of so much per ton of coal mined by them while the latter are paid a fixed rate per hour or day irrespective of the amount of coal produced.

THE GREAT WEST COAL COMPANY LIMITED, ED, CONTRACT WORKERS.

The following is an extract from a statement submitted by the company and shows the wages of all contract workers employed for the full period of six months ending 31st December, 1920:—

Name	Net wages for six months	Equivalent to a yearly wage of:
R. Lammie	1,214.26	2,428.52
J. Waugh	1,160.73	2,321.46
S. Davidson	1,567.93	3,135.86
A. Russell	1,289.11	2,578.22
P. Cairns	1,591.19	3,182.38
A. Johnstone	1,580.28	3,160.56
G. Race	985.87	1,971.74
T. Stuart	1,162.42	2,324.84
D. Biamonte	1,512.84	3,025.68
H. Waldie	1,317.58	2,635.16
J. Skorupski	1,236.65	2,473.30
R. Grieve	1,023.49	2,046.98
A. Onyszczak	1,000.01	2,000.02
C. Deprettere	1,062.04	2,124.08
T. Kinch	1,205.40	2,410.80
G. Barber	1,016.12	2,032.24
J. Grey	846.18	1,692.36
J. C. Hunter	1,024.70	2,049.40
J. S. Hunter	1,151.01	2,303.22
R. T. Webb	943.80	1,887.60
H. Booth	1,203.07	2,406.14
W. Walker	1,037.27	2,074.54
R. Weir	1,060.05	2,120.10
W. Weir	925.82	1,851.64
E. Hay	825.20	1,650.40
R. McCreadie	848.79	1,697.58

The period to which these wages apply includes the ten days during which the mine was closed owing to the strike. Had there been no strike these wages would have been materially increased.

The following list of wages actually earned was supplied by the company at the request of the applicants, to disclose the earnings of the lowest paid men, the contention being that the above list contained only the highest paid workers:

Equivalent
to a yearly
wage of:

Name	Net wages earned	Period worked	Equivalent to a yearly wage of:
J. Cockram..	\$648.98	106 days	\$1,765.79
L. Ludwig....		96 "	
T. Kinsman.	599.39	90 "	1,924.74
G. Cavanagh	220.43	34 "	1,872.72
G. Kajie....	302.39	57 "	1,531.70
D. Gordon..	195.77	31 "	1,823.59

Day Rates—

Below Ground—from \$5.35 to \$5.65 per shift of eight hours.

Above Ground—from 57½ cents per hour for unskilled labour to 79½ cents per hour for carpenters and blacksmiths.

FRASER MACKAY COLLIERIES LIMITED.

Contract Rates.

Name	Net wages earned Period from October 16th to 31st.	Average per day
M. Pihulik	\$ 77.45	\$ 7.04
P. Kully	110.10	9.75
N. Hosea	80.35	7.30
H. Hightower	113.30	10.30
J. Lothian	108.00	10.28
A. Faoro	109.55	9.13
J. Burghart	117.18	9.37

Average per day for above seven men, \$9.02

Average per day for all men on contract work, \$7.55.

Period from November 16th to 30th.

M. Pihulik	\$8.13
P. Kully	9.45
N. Hosea	5.06
E. Burk	5.16
J. Lothian	9.92
F. Pozuk	7.09
W. Lothian	5.77
A. Faoro	8.19
J. Burghardt	10.02
A. Radel	6.99
N. Faoro	6.40
A. Rose	7.01
W. Andresak	6.62

Average per day for above 13 men, \$7.37

Day Rates: Below Ground: from \$5.35 to \$5.65 per shift of eight hours.

Above Ground: From 57½ cents per hour upwards, with one youth at 50 cents per hour.

THE HUMBERSTONE COAL COMPANY LIMITED.

Contract Rates.

HIGH:

Name	Total Net Wages:	Days Worked:	Average wages per day:
C. Henzle	\$1,299.50	141	\$9.22
R. Archibald	859.65	88½	9.71
J. Schmidt	1,358.50	140½	9.67

LOW:—(Selected by men's representatives.)

J. Suey (Chinaman)	303.65	56½	5.42
G. A. Cameron	473.00	86½	5.47
G. Collit	326.15	72%	4.50

Day Rates: Underground—from \$4.96 for unskilled labour to \$6.24 per shift of eight hours for timbermen.

Above ground: from 57½ cents per hour for unskilled labour, to 79½ cents for blacksmiths and carpenters.

MARCUS COLLIERIES LIMITED.

Contract Rates.

List selected by men's representatives:

Name:	Net Wages:	Days Worked:	Average Daily Wage:
C. Robinson....	369.05	49½	7.49
G. Lowe	356.15	44	8.09
V. Roberts	244.85	39	6.28
R. Craig	240.00	33	7.27
G. Luard	395.65	69½	5.69
R. Hanford ...	375.95	69%	5.37

Day Wages—Underground: From \$5.00 to \$5.75 per shift of eight hours.

Above Ground: From 57½ cents per hour for unskilled labour upwards.

EDMONTON COLLIERIES LIMITED.

Day Rates—Above Ground: Unskilled labour from \$4.54 per shift of nine hours.

Underground: From \$4.96 per shift of eight hours for helpers to \$5.65 for timbermen and tracklayers.

DAWSON COAL COMPANY LIMITED AND CLOVER
BAR COAL COMPANY LIMITED.

No evidence was led regarding the present rates of wages paid in these mines.

BUSH MINE COAL COMPANY.

Day Rates—Underground: From \$6.55 for drivers to \$6.90 for skilled workmen per shift of eight hours.

Above ground—From 66% cents per hour for box car shovellers to 85 cents per hour for blacksmiths.

CARDIFF, STURGEON AND TOFIELD FIELDS.

The wages in all these fields are lower than, or the same as those paid in the Edmonton and Clover Bar fields. In the Tofield mines the prevailing rate is 40 cents per hour.

DRUMHELLER.

The wages paid in the Drumheller field are higher than those paid in any of the above mines or districts.

REASONS GIVEN BY OPERATORS FOR REFUSING TO PAY HIGHER RATES OF WAGES

1. *Competition.*

The operators showed that at one time the Edmonton field was within the jurisdiction of the Director of Coal Operations in District 18, and that for some time they paid the same wages as prevailed in the Drumheller field. The effect was, however, that the Edmonton and Clover Bar mines were practically driven out of the Saskatchewan and Manitoba markets, as they were unable to compete with the higher grade of coal from the Drumheller field on the basis of the same wages and same selling prices. This position of matters was brought to the attention of the Minister, and the Edmonton and Clover Bar districts were accordingly withdrawn from the jurisdiction of the Director of Coal Operations, and since then it has been generally recognized that the Drumheller field is in a position to pay much higher wages than those which can be paid by the operators in the Edmonton and Clover Bar fields. During the time when the Edmonton and Clover Bar fields were under the jurisdiction of the Director, he authorized certain selling prices for coal, but the operators in the Edmonton and Clover Bar fields were unable to obtain these prices for their products and had to sell at lower figures.

It was clearly shown that in Eastern Alberta, and in Saskatchewan and Manitoba, the Edmonton and Clover Bar

coals have to meet the keen competition of the Drumheller coals. The Drumheller coal, being of higher quality, sells at an increased price varying from 75 cents to \$2.00 per ton of a difference. Without this difference in the price, it is quite clear that the Edmonton and Clover Bar coals cannot retain their places in these markets. The Edmonton and Clover Bar fields have not materially increased their production of coal within the last ten years, but practically the whole development of the Drumheller field has taken place within that time, and there are now no less than thirty-two mines in operation in the latter district. Moreover, in the City of Edmonton, and in the surrounding territory, the Edmonton and Clover Bar operators have to meet competition with the lower grades of coal shipped in from the Cardiff, Tofield and Sturgeon fields. These coals all sell at lower prices than the Edmonton and Clover Bar coals, but if the price of Edmonton and Clover Bar coals is raised, and a larger difference of price created between the competing fields, the effect will be to divert business from the Edmonton and Clover Bar fields to the fields handling the cheaper grades of coal.

2. *Financial.*

The operators brought evidence to show that the coal mining industry in Edmonton and Clover Bar fields is by no means a profitable one. It was, I think fortunate that the operators so frankly disclosed their position. Those who testified did not refuse to answer a single question put to them by the Men's Representatives regarding costs or profits.

The Humberstone Coal Company, Limited, one of the largest operators, produced its statement of accounts for the year ended 31st May 1920. This statement was not prepared for the Conciliation Board, but was prepared solely for submission to the shareholders of the Company. During that year, which was one of the best in the history of the Company owing to the unusually long

and severe winter, the statement shows that the Company made a net profit of 23 1-10 cents per ton on an output of 82,791 tons. It was clearly shown that in arriving at these figures all capital expenditure had been charged to capital account. These profits represented a return of approximately 6 per cent on the capital invested. Taking into account the hazardous nature of the risk, and the comparatively short life of a mine in this field, the profit is ridiculously small.

Since the new rate of wages came into effect in June, 1920, the operations of this Company have resulted in the following profits and losses:

	Profit	Loss
June		\$5,088.00
July		7,571.00
August		2,948.00
September	\$1,338.00	
October	5,479.00	
November	2,259.00	
	\$9,076.00	\$15,607.00
		9,076.00
Net loss for six months	\$ 6,531.00	

The Great West Coal Company Limited, another of the largest operators, made a net profit during the period of six months since the increase of wages in June, 1920, of less than ten cents per ton.

The Edmonton Collieries Limited, showed the following results for the period since the coming into effect of the increase of wages in June, 1920:

	Loss	Profit
June	\$1,243.80	
July	1,867.34	
August		\$139.96
September	674.07	
October		863.90
November		653.69
	\$3,785.21	\$1,657.55
	1,657.55	
Net Loss for Six Months	\$2,127.66	

The Fraser-MacKay Collieries Limited, mined 6,026 tons of coal from 1st

July to 30th November, 1920, and made a net profit of 17.4 cents per ton.

Marcus Collieries Limited: This Company was operated at a loss during the whole of the year 1920.

The Bush Mine Company, Limited is paying higher rates of wages than those paid in the other mines in the Edmonton and Clover Bar fields. In doing so it is carrying out the terms of its written contract with its employees, as it has recently granted them an increase of \$1.15 per day which was given to the Drumheller workers. Before it gave this increase, however, it was apparently paying to some of its employees lower rates of wages than other mines in the Edmonton and Clover Bar fields, and the effect of its granting the increase is to give to only some of its workers a rate of wages, \$1.15 per day higher than the other mines in the Edmonton and Clover Bar fields. As a mine, however, it is in a peculiar position, as at the present rate of working the coal in the mine will be completely worked out in less than two years. The coal is being drawn from pillars, the workings around which have been developed in the past, and it is not necessary for it to do any considerable amount of development work. However, it has no water problem. It is well recognized in mining, that coal obtained from pillars in the last stages of a mine which is almost completely worked out can be obtained much more cheaply than in the case of a mine which is still developing.

The Chairman of the Board was deputized by the Board to interview Mr. Southgate, Manager of the Bush Mine Coal Company, and request that he should give evidence before the Board regarding the position at that mine, and the financial affairs of his Company. The Chairman reported back to the Board that Mr. Southgate had refused to do so, that he, the Chairman, took the view that that refusal meant that the Company was able to pay the increase which it granted recently to its workers. That is a process of reasoning which I

cannot follow; and it later came out in evidence that at the time of the interview, Mr. Southgate told the Chairman that his Company was smarting under the costs due to the increased wages, but that it was bound by the contract, and had no alternative but to pay.

One of the men's representatives at the commencement of the proceedings of the Board indicated that it would be shown that the operators had been making large sums of money in the past, but no evidence was led to substantiate this statement, and indeed it was completely dissipated by the evidence. The trade is entirely a seasonal one, and the difficulties of maintaining a mine over the summer months to keep it in condition for the following winter's trade are so costly that any small profits made by the operators in the winter are very considerably eaten into in the summer months.

ALLEGED DISCRIMINATION.

The applicants also claim that they desire an agreement with the employers to the effect that there will be no discrimination by the employers against any member of the Union because of any past dispute. It developed during the proceedings that the real object of this claim was to ventilate a supposed grievance of five former employees of the Humberstone Coal Company Limited, who were unable to obtain their own old posts on the resumption of work. I find that there was no discrimination whatever in any of the cases. One of these men stated that under no circumstances would he again take employment with the Company. Several of the others came to a written agreement with the Manager that, in the event of there being any vacancies, the Company would reinstate them according to their seniority. A number of men secured other employment in better positions, and the matter ended by the Manager stating that he would give any of the men a job at the mine if a vacancy should occur.

CONCLUSIONS.

I am of the opinion that the first claim of the applicants for recognition of the Union should be refused on the following grounds:

(a) That there is absolutely no evidence to show that it is desired by the men or even a reasonable number of them. Not one of the present employees of three of the largest companies were called as witnesses. On the other hand positive evidence was given that eighty-eight employees of the Humberstone Coal Company Limited do not desire that the Union represent them in the matter. Apart altogether from any question with the employers, a Union should not be forced on the men.

(b) That there are existing contracts in the field between some of the operators and their men. If it is the policy of the Union that these contracts should be treated as "Scraps of paper," that in itself seems to me conclusive that the Union should not be recognized. The coal companies have entered into selling contracts based on costs ascertained on the present scale of wages. They cannot increase their selling prices under these contracts, and it would be unfair to allow the men to break their contracts with them. The companies cannot break their selling contracts without being liable in damages to their purchasers.

(c) That it would be against public policy to recognize a Union which has as its officials men who take the view that a contract signed and understood by the men is not binding on the men. Mr. Gildea, the President of the Local, contended that he was entitled to break the contract although he signed it, whilst Mr. Ferguson, the secretary of the Local, though he had not signed the contract himself considered that the men who had signed were justified in breaking it. Moreover I cannot accept Mr. Ryan's denial of Mr. Dunn's and Mr. McDonald's statements. Whilst the threats referred to by Mr. Dunn and Mr. McDonald may have been made in heated moments, they undoubtedly indicate an attitude of mind such as no official of a union should have, or a policy of the Union which runs counter to public policy. Were recognition of the Union granted, and should the men kick over the traces, and go on strike without authority from headquarters, it would be the duty of these officials to see that the men observe their contracts, and if they have not got the right point of view individually, how much less can they convince others of the necessity of observing contracts.

With regard to the men's claim that they are entitled to be paid at rates of pay equivalent to the rates paid in other coal fields, particularly the Drumheller coal field, no reason was shown why the Drumheller field should be selected as a standard, any more than the Tofield, Sturgeon or Cardiff fields, and in all these fields, except the Drumheller field, wages are certainly not higher and in some cases materially lower than they are in the Edmonton and Clover Bar fields. I am of the opinion that this claim should be refused on the following other grounds:

That the industry is not a profitable one, and that if the increase of wages demanded be given, the operators will be unable to absorb the increase out of profits. They will then be faced with the alternatives of continuing to operate at a loss and of ultimately being driven out of business, or endeavoring to get higher prices for their coal. I am not prepared to agree with the proposition that the increase should be granted at the risk of putting the companies out of business. Our coal mining industry employs a considerable number of men, and circulates a large amount of money in and around the City of Edmonton. I am convinced from the evidence that the operators cannot increase their selling prices of their produce in the Eastern Alberta, Saskatchewan and Manitoba markets. In these markets they have to regulate their selling prices according to the selling prices of both higher grades and lower grades of coal, and the effect of increasing their price would undoubtedly be to put themselves out of these markets as was shown on the previous occasion on which the Edmonton and Clover Bar mines were under the jurisdiction of the Director of Coal Operations. As to the nearer markets in the City of Edmonton and the surrounding territory, the companies might increase their selling prices if the prices of the lower grades of coal mined in the competing fields are also raised, but they may not be raised and the effect of increased wages may be disastrous in these markets also. I, however, cannot recom-

mend a course of action which will have the effect of increasing the price of coal to the public for the following reasons:

That the economic situation does not warrant it. The basic industry of our Western Provinces is agriculture, and within the last six months, the prices of the products of the farm have been virtually cut in two. The trend of the prices of all commodities is downward, and there is no doubt that the trend of wages throughout the civilized world is, for the present at least, also downward. The public will not be convinced that an exception should be made at its cost in favour of the miners in a particular district. To grant the increase would in effect be to discriminate against other workers in favour of the miners in this field. The increased price of coal, if obtained would be largely paid by the working classes themselves, and with decreasing wages and less steady employment, I consider that the other working classes are less able to bear even the present price of coal than they were six months ago, and certainly it would cause deep rooted resentment with them and the public generally to increase the price.

RECOMMENDATION.

For the above reasons I am unhesitatingly of the opinion that all the demands of the applicants should be refused. I do not think the men will press their demands. The strike was ill-advised, but I believe it was grounded on an honest belief that the operators were making large profits. Now that it has been clearly shown that this is not the case, the men should accept the situation and consider themselves fortunate if they are able to maintain wages at their present standards.

I have the honour to be,

Sir,

Your obedient servant,

(Sgd.) MAYNE REID.

January 28th, 1921.

Report of Board in Dispute between the Canadian Express Company, lines in Canada, and its wagonmen, porters, clerks and messengers

A REPORT was received from the Board established to deal with the dispute between the Canadian Express Company, lines in Canada, and certain of its employees, being wagonmen, porters, clerks and messengers, members of the Canadian Brotherhood of Railroad Employees. The Board was composed as follows: Messrs. U. E. Gillen, chairman, F. H. McGuigan and Jas. T. Gunn, Toronto. The members of the Board concurred on all points save one, and the schedule of rules and rates accompanying the report was signed by representatives of both the company and employees. The Board were unable to reach an agreement with respect to the remaining point, which concerned the placing of a messenger. On this point the chairman and Mr. Gunn favoured the contention of the employees. Mr. McGuigan did not concur in this view and presented a minority report.

Report of Board

In the matter of the Industrial Disputes Investigation, Act 1907, and of a dispute between The Canadian Express Company, lines in Canada, employer, and certain of its employees, being Wagonmen, Porters, Clerks and Messengers, members of the Canadian Brotherhood of Railroad Employees, employees.

To the Hon. Senator G. D. Robertson,
LL.D.

Minister of Labour,
Ottawa.

Sir,—

A Board of Conciliation and Investigation was established by you, to enquire into the differences between the parties mentioned above. The members of the Board having taken the oath of office, met in the General Office of the Cana-

dian Express Company at Montreal, February 1st, officers and employees of the Company were fully represented, therefore we proceeded to hear evidence and review statements on all items in dispute. Meetings were held on other days to and including February 22nd.

The Board strongly urged that the parties to the dispute reach a mutual agreement, they held many private conferences, reporting to the Board almost daily, the Board making suggestions from time to time with the result that the officers and employees have agreed on an interpretation of Article 12, also rules and rates of pay as detailed in statements attached, same having the unanimous recommendation of your Board.

The one other item in dispute was the application of Express Messenger Birse for a transfer from a run he previously asked for, and to which he is now assigned, to another run. The officers and employees were unable to mutually agree as to what disposition should be made of Mr. Birse's application, therefore the Board will deal with it in a supplementary report.

The Board desire to express their appreciation and thanks to the officers and employees for their uniform courtesy and service to the Board, also compliment the officers and employees for that friendly feeling and spirit of co-operation so apparent between the officers and employees of the Canadian Express Company.

All of which is respectfully submitted.

(Sgd.) U. E. GILLEN,
Chairman.

(Sgd.) F. H. MCGUIGAN,
Member.

(Sgd.) JAMES T. GUNN,
Member.

Toronto, February 22nd, 1921.

CANADIAN EXPRESS COMPANY

SCHEDULE OF RULES AND RATES OF PAY GOVERNING CERTAIN CLASSES OF EMPLOYEES
EFFECTIVE FEBRUARY 1, 1921.

ARTICLE 1.

The word "employee" appearing in this Schedule applies to anyone employed exclusively by the Canadian Express Company as follows:

At local agencies at designated points.

In the office of the Claims Agent.

In the office of the Assistant Auditor of Receipts.

In the office of the Assistant Auditor of Transportation.

In the office of the Assistant Auditor of Waybills.

In the train service.

It does not apply to Agents, Depot Agents, Chief Clerks in the offices of Claims Agent and Assistant Auditors, nor any person whose duties include the employment of others.

ARTICLE 2.

The Book of Rules and Instructions issued from time to time by the Canadian Express Company will govern all employees.

ARTICLE 3.

Guarantee Bonds in such amounts as will fully protect the Company's interests shall be furnished by employees covered by this schedule, the Company to pay the bond premiums.

ARTICLE 4.

No employee shall be disciplined or dismissed without cause. Employees charged with any offence justifying dismissal may be immediately suspended by proper authority for a period of five days, during which time the alleged offence shall be investigated. If desired, the employee may have the assistance of two fellow employees at the investigation and full notice will be given of the evidence and charge against the employee. The decision made as a result of the investigation shall be given to the employee within ten days, and if the employee shall be dissatisfied with such decision, he may, within ten days, appeal to higher officers of the Company. If as a result of investigation, the employee is found blameless, he will be returned to the service and paid for time lost.

ARTICLE 5.

Employees will not be discriminated against on account of membership in a labor organization, nor for serving on committees representing the employees. Upon written request, a reasonable time in advance, the Chairman or

Secretary of a Committee, will be relieved for Committee work and furnished with transportation, subject to the regulations of the Railways over which this Company operates.

ARTICLE 6.

The Chairman, Secretary or other members of the Committee, representing the employees, must be employed by the Company, or on leave of absence, in order to take up with the proper officers any questions which may arise as to the interpretation of this schedule or other dispute, and they may, if necessary, appeal to the higher officers of the Company.

ARTICLE 7.

Employees attending Court or investigations by order of the Company will be paid their regular daily rates, granted transportation and allowed reasonable expenses while away from home, for which receipted vouchers will be required.

ARTICLE 8.

Employees' seniority will date from the time of entering the service, except in cases of dismissal or resignation. If laid off through reduction in force, credit will be allowed for time of previous service if re-employed within six months.

ARTICLE 9.

(a) Right of promotion will extend over and be confined to each Superintendent's Division. Promotion shall be based on ability, merit and seniority; ability and merit being sufficient, seniority shall govern.

(b) Clerical vacancies occurring in Montreal General Agent's Office (McGill Street and Depot) and Claims Agent's Office, and which are not filled from the staff at these offices, will be bulletined in the General Audit Office and vice versa.

(c) Qualified employees will be considered in line for promotion to the following positions: Agents, or Assistant Agents, Chief Clerks, Cashiers, Depot Agents, Depot Foremen, Messengers and Messengers' Helpers. Such vacancies or new positions shall be bulletined for ten days over the Superintendent's Division and appointments shall be made within ten days of expiration of bulletin period.

ARTICLE 10.

New positions or vacancies will be promptly bulletined for a period of five days in the office where they occur. Employees desiring such positions will file their applications with the designated officials within that time, and an appointment will be made within ten days thereafter. Such positions or vacancies may be

filled temporarily pending an assignment. The name of the appointee will immediately thereafter be posted where the position or vacancy was bulletined.

ARTICLE 11.

When vacancies for messengers or messengers' helpers occur or new runs are created, bulletin notice will immediately be posted at terminals, and written application for the position must be filed within ten days from date of bulletin notice.

An employee transferring from one class to another (train service to office and vice versa) will carry seniority on the basis of 50 per cent, and in addition will have credit for full time of any previous service in the class to which transferring.

ARTICLE 12.

When a material change is made in runs, through change in Railway time cards, or otherwise, messengers and messengers' helpers so affected shall have ten days after effective date of change of runs to make application for any run to which their seniority entitles them.

Runs applied for, under this rule, shall be promptly bulletined for ten days and applications confined to employees in train service.

A material change in run is defined as:

- (a) Change in terminals.
- (b) When the hours away from home are increased more than fifteen hours per month.

ARTICLE 13.

An employee transferring by order of the proper official shall receive free transportation for himself, family and household effects, (subject to the regulations of the Railway Company) and paid during time necessary to effect transfer at the same rate as for the position vacated. Employees transferring under seniority rights shall not be paid for time lost.

ARTICLE 14.

Employees accepting promotion will be allowed thirty days in which to qualify, and failing will be returned to former position without loss of seniority.

ARTICLE 15.

Employees declining promotion shall not lose their seniority.

ARTICLE 16.

Employees off duty on leave of absence, or on account of sickness, for a reasonable length of time, will not lose their seniority rights;

the Company will decide as to their standing after six months' absence.

ARTICLE 17.

In reducing forces, senior qualified employees shall be given preference.

When forces are being increased, employees who have been in the service thirty days will be returned to the service in order of their seniority. Employees desiring to avail themselves of this rule must file their names and addresses with the proper official. Employees failing to report for duty or give satisfactory reason for not doing so within seven days from date of notification, will be considered out of the service.

ARTICLE 18.

A seniority roster of all employees, on each Superintendent's Division, who have been in the service six months or more, showing name and date of entering the service, will be posted in a place accessible to those affected.

The roster will be revised and posted in January of each year, and shall be open to correction for a period of sixty days from the date of posting, on presentation by an employee, or his representative, of proof of error. The duly accredited representative of employee shall be furnished with a copy of the roster on written request.

ARTICLE 19.

Employees covered by this Schedule shall be paid not less than the established salary for the position occupied.

Nothing in this Schedule shall be construed as reducing the rate of any employee while filling present position.

ARTICLE 20.

Rates of pay established by this Schedule shall apply to employees paid on the hourly basis. Their pay shall not be less per hour than that established by this Schedule for monthly, weekly, or daily rated employees performing the same class or kind of labor, nor shall their conditions of service be less favorable.

ARTICLE 21.

Where a new office is established, or an increase of business necessitates additional force at any office, the employees appointed will receive the same rates as paid for similar service at offices of like character and importance.

ARTICLE 22.

Employees entering the service who lack the necessary experience or ability to perform the work of their assignment, shall receive \$60.00

per month for the first six months, \$70.00 per month for the second six months of service and thereafter the rate of the position to which assigned. Similar experience with other Express or Transportation Companies shall be cumulative and count the same as if performed for the Canadian Express Company. Nothing in this paragraph shall be construed to mean that former employees may not be re-employed and paid the established rate of the position to which assigned. This article does not apply to positions for which graded scales of pay are provided, nor to clerks in the General Auditor's and Claims Agent's office under eighteen years of age.

ARTICLE 23.

(a) Except as hereinafter provided and excluding employees assigned to the train messenger service, eight consecutive hours, exclusive of the meal period (not exceeding 1½ hours) shall constitute a day's work.

(b) For employees assigned to the smaller class of agencies where not in excess of five employees are regularly employed (including clerks, transfer employees and drivers) overtime shall be paid for time actually on duty in excess of eight hours within twelve consecutive hours, also for all time in excess of twelve consecutive hours computed continuously from the time required to report for duty to the end of day's work. Time shall be computed as continuous service in all cases where the interval of release from service does not exceed one hour.

ARTICLE 24.

(a) Excluding employees assigned to the train messenger service, the first two hours of overtime accruing after eight hours of service within the spread of twelve hours shall be computed pro rata, and thereafter (including overtime, after twelve hours) at the rate of time and one half time on the actual minute basis. For the offices of the Assistant Auditors and Claims Agent, the time allowed for Saturday afternoon will be deducted before allowing overtime.

(b) When sent for to work outside of established hours, employees coming under the provisions of Article 23 shall be paid a minimum allowance of three hours at hourly rates.

Employees required to come on duty after completing day's work and the interval of release from duty exceeds one hour, will be allowed a minimum of one and a half hours at pro rata rates.

ARTICLE 25.

Employees (except messengers and helpers) will not be expected to work more than six days per week. If requested to work on a

seventh day or night, they shall be paid one and a half times the regular hourly rates—minimum three hours at regular hourly rates.

ARTICLE 26.

Employees assigned to a combination of train messenger and station service will be paid overtime under the provisions of Article 23, Section (b) of this Schedule.

ARTICLE 27.

Messengers or Messengers' helpers held to fill a position at other than messengers' work between trips, will be paid at pro rata rates at the highest rate of position to which called, minimum of one hour. If called to come on duty for such service, they will be paid the same rate with a minimum of three hours.

ARTICLE 28.

(a) Employees assigned to the train service will be paid the Schedule rate for such run for 6,000 miles or less; mileage made in excess of 6,000 miles to be paid pro rata rates per mile based on 6,000 miles per month.

(b) Employees assigned to the train messenger service and who work only a portion of a month will be paid their full proportion of excess mileage made under clause (a) of this Article.

ARTICLE 29.

Messengers and helpers on turn around runs (except runs where the period of relief is two full days or more in each seven day period) shall be paid overtime at the rate of 30 cents per hour for all time in excess of an average of twelve hours per day, for each day worked, time to be computed continuously from the schedule departure time of train from home terminal on first trip until schedule arrival time of train at end of final trip.

Example: A turn around run is a run where one or more round trips are made per day.

ARTICLE 30.

Messengers and messengers' helpers will be paid initial terminal time, beginning sixty minutes after the time they are required to report, and do report for duty, until scheduled leaving time of train in which car is handled, and final terminal delay time beginning thirty minutes after the time train in which car is handled arrives at terminal or set out point, excepting at Montreal, where terminal delay time shall not commence until after one hour. Terminal time to be computed on the actual minute basis at 50 cents per hour for messengers and 40 cents per hour for messengers' helpers.

ARTICLE 31.

(a) In the event of a train not arriving at objective terminal on schedule time, messengers and messengers' helpers will be allowed detention after one hour at the rate of 50 cents per hour, time to be computed on the actual minute basis.

(b) Detention time shall cease at schedule departure time of train of next regular trip.

When regular trips are missed as result of train detention, the hours of such trips shall be deducted from detention time. (Time consumed in dead head trips shall not be deducted.)

ARTICLE 32.

Employees will not be required to suspend work during regular hours to absorb overtime.

ARTICLE 33.

(a) Employees, except messengers and messengers' helpers, on monthly salary working less than a full month, will be paid pro rata for the time worked on the basis of the working days in that month, less Sundays.

(b) Messengers and messengers' helpers working less than a full month will be paid in proportion to the number of trips made at the rate of pay per trip to be ascertained by dividing the monthly rate of pay by the total number of trips to be made in that month.

ARTICLE 34.

(a) Employees covered by this Schedule, who have been in continuous service for three years or more, will be granted one week's vacation with pay each year.

Applications will be made in writing to the proper official and will be considered in the order received. The applicants will be given due notice of the vacation date assigned to them. Relief will be arranged as nearly as possible to the date specified in the application, but the Company will not be obliged to grant vacation on any particular date. If the Company finds it inconvenient to grant the vacation in the year of the application, it shall be added to the vacation period of the following year.

Extended leave for any employee, if requested, will be granted if practicable.

While employees are absent on vacation their positions may be filled during that time at less than the specified rate of pay of the position, but no employee shall perform relief work at less than his regular rate of pay.

(b) If called upon to work on Christmas or New Year's day, employees (except messengers and messengers' helpers) will be paid one half day's pay in addition to the monthly rate.

(c) It is understood that where at the present time it is customary to allow employees

Saturday afternoons off, this practice will be continued.

ARTICLE 35.

(a) Messengers or messengers' helpers will, upon application to their Superintendent, be supplied with a water can.

(b) Where the Company requires special stamps (rubber), they shall be supplied free of cost.

ARTICLE 36.

(a) When a messenger is required to work more than one car containing express matter, he will be supplied with a helper when reasonably necessary.

(b) Messengers or messengers' helpers will not be required to ride in cars without heat or light.

ARTICLE 37.

Any employee performing relief work (other than relief messenger paid a salary which includes travelling expenses) will be paid the minimum rate for the position, but in no case less than his own rate, and if away from home, allowed reasonable expenses.

Messengers and messengers' helpers dead-heading on Company's orders will be paid for necessary time travelling at the rate of pay of his regular position.

ARTICLE 38.

Any employee leaving the service for any cause shall be paid promptly all monies due and upon request, given by Superintendent a certificate of service showing capacity in which employed and reasons for leaving the service.

ARTICLE 39.

Agency employees will be paid semi-monthly, on the 1st and 16th; train employees not later than the 10th and 25th of each month.

ARTICLE 40.

This Schedule to become effective from February 1, 1921, and continue in effect three months from February 1, 1921, and thereafter unless terminated by thirty days' notice in writing by either party.

For the Canadian Express Company.

(Sgd.) JOHN PULLEN,
President.

For the Employees,

(Sgd.) M. J. DUNDAS,
Gen. Chairman.

Montréal, February 19, 1921.

Report of Messrs. U. E. Gillen and James T. Gunn

To the Hon. Senator G. D. Robertson,
LL.D.,
Minister of Labour,
Ottawa.

Sir,—

Supplementing your Board's report of this date regarding differences between the Canadian Express Company and certain of its employees. All items in dispute were disposed of by mutual agreement between employer and employee except the claim of Mr. I. D. Birse, express messenger, to transfer to another run. The circumstances in connection with the claim are exceptional, and when it became apparent that employer and employee would not agree, the Board requested that each party to the dispute file a written statement giving all the facts in the case. Mr. F. Norman, Superintendent of the Canadian Express Company at Winnipeg, filed a statement on behalf of the Company, dated Montreal, February 12th, and Mr. M. J. Dundas, General Chairman of the employees' Committee, filed a statement on behalf of the employees, dated Montreal, February 17th; these statements are quoted for information of those reading this report.

Montreal, February 12, 1921.

To the Chairman of the Board of Conciliation,
Montreal.

In the matter of alleged grievance, I. D. Birse, messenger, Edmonton-Prince George Route.

In October, 1919, Mr. Birse was appointed to the Edmonton-Prince George Route under a bulletin dated October 9, 1919, which reads as follows,—

Application for the position of messenger on the above mentioned run (salary \$130.00 per month) will be received until October 19th. This is the run of George Ferraboschi, who is being granted six months leave of absence.

(Sgd.) F. NORMAN,
Superintendent.

Ferraboschi did not return to the service and Birse remained on the Edmonton-Prince George

Route. He did not make any application for change of route at the expiration of the six months' period, nor until he had been on the Edmonton-Prince George Route for about a year, and this application was made under the following circumstances:

On October 4, 1920, a change was made in the operation of trains over a section of the line between Edmonton and Prince George by which additional trains were put in service between Edmonton and Jasper, a point about half way to Prince George.

It was then decided to run the messengers on the Edmonton-Prince George Route, to Jasper and Prince George alternately, and to place an additional messenger on that route, called Edmonton-Jasper-Prince George Route, and a bulletin was issued October 4th, 1920, for a vacancy for an additional messenger on that route, this bulletin reading as follows:—

Bulletin 92.

Messenger Edmonton-Jasper-Prince George run.

Application for the position of messenger on this run (salary \$140.50 per month) will be received until October 14th. This being a fourth messenger to cover trains 1, 2, 3, 4.

This run allows lay over each trip of two days at Edmonton, two days at Jasper, and one night at Prince George, average mileage, 5,130.

(Sgd.) F. NORMAN,
Superintendent

Under this bulletin, Birse applied for a change of run, claiming a right to do so under article 12 of the existing schedule which reads—

When change in railway time cards makes a material change in messengers' runs, messengers and messengers' helpers so affected will have ten days after effective date of time card change to make application for change of runs.

During the bulletin period of ten days, October 4—14th, it was found that the messengers were dissatisfied with the change, and it was decided to cancel the arrangements and leave the Edmonton-Prince George Route undisturbed, and create a new run called Edmonton and Jasper. For that reason the bulletin of October 4th was cancelled by a bulletin issued October 15th, 1920, reading as follows,—

Bulletin 93.

Edmonton-Jasper Run.

Applications for the position of messengers (2) on this run (salary \$131.00 per month) will be received until October 25th. This is a new run resulting from the National No. 1 and No. 2 running over G.T.P. between Edmonton and Jasper.

The run will be two round trips each week (four nights) leaving Edmonton midnight, arriving Jasper 10 a.m., leaving Jas-

per, 7.30 p.m., arriving Edmonton, 6.45 a.m. The lay over at Edmonton during each week is three days and one night, and at Jasper, four days and two nights.

Bulletin 92 covering Edmonton-Jasper and Prince George run is cancelled and Edmonton-Prince George messengers will run as previously.

(Sgd.) F. NORMAN,
Superintendent.

The change in the Edmonton-Prince George Route lasted about two weeks and during that period, Birse performed slightly more service for the Company than he would have done had the change of the run not been made, and for that extra service he received extra pay, that is, in addition to his regular salary of \$140.50 on the Edmonton-Prince George Route, he received extra pay for the additional service to Jasper.

When Birse applied for a change in run, he asked for the Winnipeg-Watrous run, the salary of which is \$155.00 per month, as compared with the salary of \$140.50 on the Edmonton-Prince George Route.

Had the Winnipeg-Watrous run become vacant in the ordinary way, Birse's seniority would not have entitled him to that run, because on the seniority list there were sixteen other messengers older in the service than himself, who in accordance with the schedule would have had prior right to the Winnipeg-Watrous Route. Birse sought to step over the heads of sixteen senior men to secure the run he wanted and hoped to do so, construing rule No. 12 as best suited his purpose.

In compiling this rule, it was not the intention of the Company to give any man the right to improperly obtain promotion over the heads of the others. The unfairness of such an interpretation of rule 12 has been recognized by the Committee of the Employees, which is demonstrated by the fact that this rule has been amplified to cover a situation of this kind, and now reads as follows:—

When a material change is made in runs, through change in railway time cards, or otherwise, messenger and messengers' helpers so affected shall have ten days after effective date of change of runs to make application for any run to which their seniority entitles them.

Runs applied under this rule shall be promptly bulletined for ten days and applications confined to employees in train service.

A material change in run is defined as:—

- (a) Change in terminals.
- (b) When the hours away from home are increased more than fifteen hours per month.

The intention of the original rule (12) was to protect an older and more advanced messenger in case his position was changed to his

disadvantage by circumstances beyond his control, such as changes in railway time tables, which would necessitate his moving or being away from home to a greater extent and increasing his away from home expenses; in such cases, he would be entitled to some position on a par with his own. It was not the intention that rule 12 would give him the right to something better than he already had, or to step over the heads of his seniors.

In Birse's case, the Company contends that he must prove that by the temporary change of two weeks in his position, he suffered some material hardship. The Company maintain that he has not, but that he was merely required to perform some additional service during the period of two weeks, for which he received extra compensation.

He is still on the Edmonton-Prince George Route, which is the same today as it was prior to October 4th, 1920, when he applied for a change through the temporary change of his run, but as this change did not result in any hardship or injustice to him, the Company maintain he has no grievance.

The question has been raised with the Employees' Committee as to the right of the Company to cancel a bulletin and this right has not been challenged.

(Sgd.) F. NORMAN,
Superintendent.

Montreal, Que., Feb. 17th, 1921.

Mr. U. E. Gillen,
Chairman Conciliation Board,
Montreal, Que.

Dear Sir,—

For consideration by yourself and members of the Board of Conciliation, I wish to submit the following:

On October 2nd, 1920, Route Agent, Mr. Natress, of Edmonton, Alta., issued instructions (see sixth letter accompanying file) saying in part, "The change in train service necessitates a change in the messenger service between Edmonton and Prince George. Such route in future will be known as the Edmonton, Jasper and Prince George Route. Four messengers will be assigned to the new route and will cover the runs according to the schedule which I am enclosing herewith." Previous to October 2nd the Edmonton-Prince George Route was covered by three messengers making four round trips per month. With the addition of the trip to Jasper, and the fourth messenger, it would mean three round trips, Edmonton-Prince George and four round trips, Edmonton-Jasper, or the addition of approximately nine hundred miles per month to each messenger.

Article 12 of the schedule provides that when change in Railway Time Card makes a material change in messengers' run that messengers affected will have ten days to apply for change of run. Upon receipt of Mr. Natress' letter of October 2nd, Messenger

Birse, of the Edmonton-Prince George Route made application, to the Superintendent under Article 12, for the Winnipeg-Watrous Route, three of the messengers on this route being junior to Birse. Not receiving a reply, Birse wired the Superintendent on October 18th. Neither of these applications were acknowledged.

Our claim is that the instructions issued by Mr. Natress under date of October 2nd, made a material change in the Edmonton-Prince George Route, and under article 12, Birse's claim for a change of run is justified. The Company claim that as the run has been again changed back as it was formerly that no material change exists. Our claim is that a material change did exist, that application was made by Birse within the prescribed time and that his claim is justified. Article 12 does not specify how long a change has to exist nor has any mention ever been made of a time limit being set. Our understanding has been that when a change takes place, under the conditions mentioned in Article 12, that messengers so affected are entitled to exercise their rights under this Article.

Accompanying this is the file of correspondence which has passed between the Officers of the Canadian Express Company and myself, also bulletins issued affecting the Edmonton-Prince George Route.

Yours truly,

(Sgd.) M. J. DUNDAS,
General Chairman,

Canadian Express General Grievance Committee.

A statement from Mr. Birse, filed with the Board says in part,—

When I bid for the Edmonton-Prince George run, my bid was only good for six months, as that is what the Bulletin called for and at the end of six months, I naturally thought I would be free to bid on any run which my seniority entitled me to.

The Board repeatedly tried to bring the parties together, feeling that a mutual agreement in this, as in other points would make for harmony in the service, and knowing that a recommendation of a Board may be accepted or rejected by either party.

After giving careful consideration to former and present rules, the evidence before the Board, and statements filed in connection with this case, it is the recommendation of the members of the Board signing this report that Mr. Birse be assigned to any run he may elect to which his ability, merit and seniority entitles him.

Respectfully submitted,

(Sgd.) U. E. GILLEN,
Chairman.

(Sgd.) JAMES T. GUNN,
Member.

Toronto, February 22nd, 1921.

Mr. McGuigan's Report

In the matter of the Industrial Disputes Investigation Act, 1907, and of a dispute between The Canadian Express Company, lines in Canada. employers, and certain of its employees, being Wagonmen, Porters, Clerks and Messengers, members of the Canadian Brotherhood of Railroad Employees, employees.

The Hon. G. D. Robertson,
Minister of Labour,
Ottawa, Canada.

Dear Sir:—

Confirming my wire, February 23rd, 1921, to your Mr. F. A. Acland, as follows,—

"I find myself unable to agree with Messrs. Gillen and Gunn regarding interpretation of Rule Twelve of Canadian Express schedule, and the rights of messenger Birse thereunder. Will mail you from Montreal my views thereon as soon as I receive from Chairman Gillen complete copies of Board's Report sent to you.

(Sgd.) F. H. MCGUIGAN."

A few hours after sending the above, I received the following note from Chairman Gillen:—

Dear Mr. McGuigan:—

At the meeting today, Mr. W. E. Norman had a message for us concerning Mr. Birse's application to be transferred to another run. I requested him to get word to you at Montreal. I presume he has done so. If not, you should get the information before drafting a minority report. I anticipate after getting the information you will wire the Minister to attach your name to the Supplementary report.

(Sgd.) U. E. GILLEN.

Since receiving the above, I have not succeeded in corroborating it. Although in doubt as to its exact meaning, it seems reasonable to assume that Mr. Birse has changed his mind and made request to

be transferred to some other run. If so, this would remove the only question in dispute. If, on the other hand, he still contends for the Winnipeg-Watrous run, I am unable to believe that he has the slightest claim to it, for the following reasons:—

1. There has been no material permanent change in runs, although it is true a temporary change was made on the Edmonton-Prince George run lasting less than two weeks when it was found to be unsatisfactory, and was cancelled by Bulletin 93, dated October 15, 1920, under which all messengers affected resumed their former runs leaving no vacancies to be filled, and entirely disposing of the so-called *material change* upon which Birse bases his claim for transfer, as much stress was laid upon this word "material" every time this question was being considered and discussed through the meetings of the Board.

The recommendation appearing on page 2 of the Supplementary Report dated Toronto, February 22, 1921, and bearing the signature of Messrs. Gillen and Gunn, reading as follows:—

After giving careful consideration to former and present rules the evidence before the Board and statements filed in connection with this case, it is the recommendation of the members of the Board signing this report that Mr. Birse may be assigned to any run he may elect to which his ability, merit and seniority entitle him to.

(Sgd.) U. E. GILLEN,
Chairman.
(Sgd.) J. T. GUNN,
(For the employees).

A literal interpretation of the above recommendation would give Birse the right to select any one of the numerous runs on the 12,000 or more miles of express service operated by this Company between the Atlantic and the Pacific

Oceans; whereas, Article 9 of the then existing schedule provides that promotions will extend over and be confined to each Superintendent's Division, and Article 11, of the same schedule (Para. 1)—see schedule enclosed—reading:

When vacancies for messengers' or messengers' helpers occur, or new runs created, Bulletin notice will immediately be posted at terminals, and written application for the position must be filed within ten days from date of Bulletin notice.

which would appear to provide little support for such recommendations, as no material or permanent change has been made or vacancy exist.

3. The principal and insurmountable objection to this recommendation is the fact that the three messengers now in charge of the Winnipeg-Watrous run (one of whom Birse is seeking to displace) were engaged and induced to enter the service of the Company at the time of the seditious O.B.U. strike in Winnipeg, on the distinct understanding that they should retain this run as long as they performed their duties satisfactorily. This agreement was entered into between the Company's officers and these men, after the messengers regularly employed on this run had left the service of the Company with whom no grievance existed and went on sympathetic strike and refused to report for duty although repeatedly requested to do so and warned that their places would be filled if they failed to report.

To displace any of these men, under the circumstances, would be a breach of contract and an act of deplorable bad faith on the part of the Company.

Very respectfully,

(Sgd.) F. H. MCGUIGAN,
Montreal, February 25, 1921.

PROCEEDINGS OF THE CANADIAN RAILWAY BOARD OF ADJUSTMENT No 1.

TWO new decisions of the Canadian Railway Board of Adjustment No. 1 have been received by the Department. Case No. 92 has reference to the claim of a conductor of the Canadian Pacific Railway Company for payment for time out of service pending trial. Case No. 93 has reference to a controversy between the Grand Trunk Railway Company and trainmen over the application of a rule of the yardmen's schedule.

Case No. 92. — The Canadian Pacific Railway (Western Lines) and the Order of Railway Conductors.

A conductor of the Canadian Pacific Railway was held out of service pending trial in connection with certain irregularities in the handling of transportation on his train. The case came before the Court eighteen days after the issuing of the summons, but the defendant, through his counsel, applied for a remand and secured a postponement of the trial until the next sitting of the Court six months later. The conductor was finally acquitted of the charge preferred against him. The Company had paid or was prepared to pay this conductor for the time lost up to the day when the case first came for trial but refused to pay for the six months period of postponement.

The Company contended that the accused conductor was alone responsible for the delay in bringing the case to trial and that the remand was granted solely at his request. He and his counsel had from October 17 to November 4 to prepare the defence, and as the only evidence offered for the defence was that of the defendant himself and two witnesses as to character, the Railway Company claimed that it should not

pay for the time lost on account of the adjournment.

It was held on behalf of the employee that the Company was solely to blame for the loss sustained by him on account of having held him out of service on charges of which he was acquitted by the Court, that the Court's decision in allowing the remand asked for was sufficient justification for the request and that he was entitled to compensation for all time lost in view of the action of the Company in granting the remand.

The Board declared that it was made evident that the application for a delay made by the accused employee's counsel was not objected to by the Crown Attorney and was accordingly granted. The decision of the Board must be governed by these circumstances in addition to the other facts and the established practice between the employees and the Company in such cases.

The decision of the Board was as follows:

Conductor shall be paid for time lost while out of service pending trial, less earnings he may have received from other employment, if any, in which he may have been engaged in the interval.

Case No. 93.—The Grand Trunk Railway Company and the Brotherhood of Railroad Trainmen.

A disagreement existed between the Grand Trunk Railway Company and the Brotherhood of Railroad Trainmen in reference to the application of Rule 'N' in the yardmen's schedule which reads as follows:

"Regularly assigned yardmen, who do not lay off of their own accord, will be paid not less than twenty six (26) days in any one month. This will not apply to spare men."

The Company contended that any overtime earned by a yardman should be used to make up the guarantee when necessary. In support of their contention the Company stated that this rule first appeared in the schedule of 1917 and no question was ever raised in regard to paying the guarantee exclusive of overtime until September 25, 1920, when in presenting a revised schedule the men added the words "exclusive of overtime." In the negotiations which followed the Company's representatives took the stand that it was not fair to expect the Company to pay for time which it was impossible to work as in February which had only 24 working days, and in some years in two other months with only 25 working days. At some points, unless overtime was utilized, it was impossible for the men to earn the guarantee of 26 days. The trainmen's committee finally consented to leave the rule as it was. While the Canadian Pacific Railway pays its yardmen a guarantee of 26 days exclusive of overtime, it has an interpretation in its schedule to this effect. Other companies guarantee to their yardmen payment for the calendar working days in the months only, or six days per week. It was also claimed that schedules for other classes of employees did not contain any monthly guarantee rule. The Company contended that if they paid the equivalent of 26 days multiplied by eight hours or 208 hours in any month, utilizing overtime, if any made, to do so, they were fulfilling the terms of the rule and were paying not less than twenty-six days.

On behalf of the men it was claimed that a meeting was arranged with the Superintendent of Grand Trunk Terminals, at Toronto, and other yard masters on April 25, 1919, when it was agreed that regularly assigned yard and transfer crews should be paid for 26 days each month regardless of hours

worked each day, and with this understanding the matter was settled at that time. It was further represented that the words "regardless of overtime earned" were withdrawn from the proposed revised schedule in November, 1919, when the officials of the Company on the General Committee claimed that these words were not necessary as the question had been disposed of in the Toronto Terminals satisfactorily to the men, and as they did not appear in the schedules of other companies. The men contended that in accordance with the language of Rule 'N' and in the absence of any agreement to the effect that overtime would be used to make up the 26 day guarantee, yardmen should be paid not less than 26 days in any one month regardless of overtime earned.

The Board declared that although the representatives of both the employees and the Company based their claims on what they stated they believed to be the understood and intended application of the rule in question, their statements as to what this understanding and application were at the time the rule was inserted in different schedules since 1917 were at direct variance with each other.

The decision of the Board was as follows:

In view of the lack of positive evidence in the written and oral submission before the Board and other inconsistencies which have developed in the case, the question involved is referred back to the contending parties with the suggestion that further efforts be made to reach an agreement on the intended application of the rule in dispute.

The Board also suggests that if possible the parties should agree on an interpretation of the rule in question on the basis of equity, and that in the event of failure to agree the matter should again be referred to the Board accompanied by definite and specific evidence which will enable the Board to reach a proper conclusion, or with a request that the Board place what, in its opinion, would be an equitable interpretation on the rule.

THE GOVERNING BODY OF THE INTERNATIONAL LABOUR OFFICE

Sixth Session of the Governing Body, held at Geneva, Switzerland, January 11—13, 1921

THE Sixth Session of the Governing Body of the International Labour Office was held at Geneva, Switzerland, on January 11-13. Each of the twelve Governments holding seats on the Governing Body sent a representative except the Government of the Argentine; while the full number of representatives from both the employers' and workers' organizations—that is, six representing each group—were in attendance. The Canadian Government was represented by Mr. L. C. Christie, Legal Adviser of the Department of External Affairs, who was appointed to attend this Session in substitution for the Honourable G. D. Robertson, Minister of Labour, the official representative of Canada on the Governing Body, who was unable to be present. Mr. H. J. Halford, of Hamilton, Ontario, attended as a member of the workers' group in substitution for Mr. P. M. Draper, Secretary of the Canadian Trades and Labour Congress, who holds a seat on behalf of Canadian labour interests.

The Director of the International Labour Office submitted a long report describing the activities of the Office during the period which had elapsed since the October session of the Governing Body. In addition to the matters mentioned below the report dealt with questions of general organization, the relations between the International Labour Organization and the League of Nations, and with the budget. Information was given as to the measures taken in various countries in pursuance of the Draft Conventions and Recommendations adopted by the Washington and Genoa Conferences.

A discussion was held upon the section of the Director's report dealing with the enquiries and investigations now being conducted by the International Labour Office. As to certain of

these enquiries the question was raised whether they had been properly authorized under the terms of Part 13 of the Treaty of Versailles and whether they were serving a useful purpose. After an exchange of views it was agreed that this question should be further explored and that it might be raised again by any Government either at the next Session of the Governing Body or at the next Annual Conference.

The Director also submitted to the Governing Body a complaint which had reached him concerning a controversy between certain Spanish workers' associations and the Spanish Government. It was decided that as the complaint did not show a breach of any international convention the Governing Body had no jurisdiction to consider it under Part 13 of the Treaty of Versailles. Similarly it was held that the Governing Body had no authority to entertain a proposal to assist certain Russian refugees who had been driven from Russia as the result of the civil wars there. The proposal involved the establishment of organizations for the purpose of placing these refugees in employment in various countries.

The most important work of the Sixth Session was the adoption of the Budget for 1921. The First Assembly of the League of Nations, held at Geneva in November and December, 1920, voted a lump sum of 7,000,000 gold francs for the expenses of the International Labour Organization during 1921. At that time the International Labour Office was unable to furnish detailed estimates, but these had been prepared in the interval, and it therefore became the duty of the Governing Body to pass upon them and to allocate the lump sum among the different sections of the Labour Organization. In the final result the estimates were reduced by 400,000 gold francs be-

low the total sum granted by the Assembly of the League. Careful provision was made for controlling expenditures under the emergency or unforeseen expense items of the budget, and general financial regulations were adopted laying down principles under which expenditures are to be made similar to those adopted by the Assembly of the League with regard to the Secretariat of the League.

The agenda and date of the International Labour Conference for 1921 were also considered. A proposal was made that agricultural questions should be taken off the agenda of this Conference, especially in so far as the application of the eight-hour day to agriculture is concerned. It was finally decided, however, that since the item had already been placed upon the agenda any decision to strike it off could only be made by the Conference itself on the objection of any of the Governments under Article 402 of the Treaty of Versailles.

The date of the 1921 Conference had already been fixed for April, but as it was apparent that it would be impossible before that time to circulate the usual questionnaires to the various Governments and to prepare reports upon their replies, it was unanimously agreed that the Conference would have to be postponed. After some discussion it was

decided that the date should be fixed for the end of October. For the first time the Conference will meet this year at the permanent headquarters of the International Labour Organization in Geneva.

The Governing Body also received reports upon the following subjects:

(1) The action required by the decisions of the Joint Maritime Commission. (2) The reform of the composition of the Governing Body. (3) The scrutiny of the appointments made under Article 412 of the Treaty of Versailles to the panel from which any necessary Commissions of Enquiry may be chosen. (4) The work of the Commission on Unemployment. (5) The relations between the International Labour Organization and the League of Nations, and (6) A proposal that the Standing Orders of the Annual Conference should be amended so as to constitute the Governing Body the Committee of Selection of the Conference.

With regard to these items it was decided that, as so much time had been consumed by the consideration of the budget, their discussion should be adjourned until the next Session of the Governing Body.

It was decided that the Governing Body should meet at Geneva for its next Session on April 12, 1921.

COST OF LIVING ADJUSTMENT OF WAGES OF VANCOUVER ISLAND COAL MINERS

THE Cost of Living Commission appointed on January 21, 1919, to determine every three months the increase in the cost of living for coal miners on Vancouver Island, and to report the amount by which wage rates should therefore be increased or decreased, forwarded its report for the quarter ending December 31, 1920*, to the Department, on January 22, 1921. The

Commission consisted of Mr. John McAllister, representing the miners; Mr. Tully Boyce, representing the operators; and Mr. D. T. Bulger, Fair Wages Officer of the Department of Labour, Chairman.

As in previous investigations, forms were sent out to the merchants and dealers with whom the majority of miners are accustomed to trade in the various localities. The forms contained the same list of groceries, provisions, meats,

*For previous orders see LABOUR GAZETTE, November, 1920, page 1471, and various preceding issues.

etc., that was used on previous occasions. The method of computation under review was the same as used for previous adjustments, namely, to determine the percentage of increase or decrease, as the case may be, of prices on December 31 over September 30, for groceries, provisions, meats, etc., and to add a further two-fifths of this increase, or decrease, as an equivalent to cover similar increases or decreases in clothing. A decrease of 13.38 per cent was ascertained, which amounted to a decrease in wages of 40 cents per day where the base rate was \$3 per day, and 43 cents per day where the base rate was \$3.15, the decrease in wages to become effective from February 1, 1921, and to apply to all underground service, clerical and office employees.

Retail price list returns were made by 14 general merchants and seven retail dealers in meat in the towns of Nanaimo, Ladysmith, Cumberland, Courtney, South Wellington, Union Bay, Bevan and Cassidy. Sugar, all kinds of flour, soda biscuits, lard, oatmeal, rice, sago, brooms, syrup, tea, coffee and rolled oats showed sharp declines. Slight decreases were found in dried vegetables, barley, tapioca, canned tomatoes, lunch tongue, soaps, pickles, cheese, ham, bacon, butter, evaporated milk, flavoring extracts, currants, evaporated peaches and prunes. Slight increases were found in jam, molasses, canned salmon, canned roast beef, vinegar, cookies, raisins, figs, apricots and matches. No changes occurred in cornmeal, canned corn, beans and corned beef.

STRIKES AND LOCKOUTS IN CANADA DURING FEBRUARY, 1921

FIFTEEN strikes, involving 2,194 employees were reported as having commenced during February. There were in existence at some time or other during the month 22 strikes, involving approximately 2,624 workpeople. The total time loss on account of industrial disputes was estimated at 23,547 working days, as compared with 15,951 in January, 1921, and 30,920 in February, 1920. The time loss occasioned by the 15 strikes which began in February was 16,209 working days, while a loss of 7,338 is charged to the eight strikes that commenced prior to February. Termination was reported in the case

of three strikes which commenced prior to February. Three strikes commencing during February terminated during the month, leaving the following 15 strikes affecting 2,283 workpeople on record on February 28: sawmill workers, Vancouver; coal miners, Brule, Alta.; building trades and painters and paperhangers, Toronto; machinists and patternmakers, Brantford; moulders, Charlottetown; employees of steel and coal companies, Sydney; finishers, Toronto; machine operators, Thorold; garment workers, Toronto and Hamilton; tailors, etc., Montreal, and electrical workers at Vancouver, New Westminster and Victoria.

STRIKES AND LOCKOUTS DURING FEBRUARY, 1921

Industry or Occupation	Particulars	No. of employees affected	Time loss in working days
Strikes commencing prior to February, 1921			
BUILDING AND CONSTRUCTION:—			
Plumbers, Montreal, Que.....	Commenced October 4. For increased wages. Information received indicates conditions no longer affected.		
METALS, MACHINERY AND CONVEYANCES:—			
Employees of steel and coal companies, Sydney, N.S.	Commenced November 22. For increased wages and improved working conditions. Unterminated	150	3,600
CLOTHING:—			
Garment workers, London, Ont.....	Commenced January 28. Against a reduction in wages. Settled by negotiations. Work resumed February 12.	140	1,400
Garment workers, Sault Ste. Marie, Ont.....	Commenced January 17. Employees refused to work on piece-work system. Settled by mediation. Work resumed February 14.	30	330
Garment workers, finishers and pressers, Toronto, Ont.	Commenced November 25. Employees refused to work on piece-work system. Unterminated.	40	960
Tailors, pressers, cutters and operators, Montreal, Que.	Commenced January 10. Employees refused to work on piece-work system. Unterminated.	26	624
Clothing workers, Toronto, Ont.....	Commenced December 6. Employees refused to work on piece-work system. Men returned to work on employers' terms. Work resumed February 15.	18	216
TEXTILES:—			
Spinners, Guelph, Ont.....	Commenced January 11. Against a reduction in wages. Settled by negotiations; work resumed unconditionally February 10.	26	208
LEATHER:—			
Shoe workers, Montreal, Que.....	Commenced November 8. Against a reduction in wages. Information received indicates conditions are no longer affected.		
Strikes commencing during February, 1921			
LUMBERING:—			
Planemen and yard labourers, Vancouver, B.C.	Commenced February 7. Refusal to return to a longer working day. Settled by negotiations; men returned to work February 15, on employers' terms.	50	300
Sawmill workers, Vancouver, B.C.....	Commenced February 11. Against a reduction in wages. Unterminated	81	1,215
MINES, SMELTERS, CLAY PRODUCTS, QUARRIES, ETC.:—			
Coal miners, Brule, Alta.....	Commenced February 22. Against a new dockage system. Unterminated.	500	3,000
Coal miners, Sydney Mines, N.S.....	Commenced February 10. Demand for retroactive wages. Settled by negotiations. Work resumed February 26.	55	825
BUILDING AND CONSTRUCTION:—			
Building trades, Toronto, Ont.....	Commenced February 28. Against the employment of non-unionists. Unterminated.	56	56

STRIKES AND LOCKOUTS DURING FEBRUARY, 1921—*Continued.*

Industry or Occupation	Particulars	No. of employees affected	Time loss in working days
Painters and paperhangers, Toronto, Ont....	Commenced February 14. Against a reduction in wages. Un-terminated.	25	325
METALS, MACHINERY AND CONVEYANCES:—			
Machinists, Brantford, Ont.....	Commenced February 23. Against a reduction in wages. Un-terminated.	26	117
Metal workers, St. John, N.B.....	Commenced February 4. Against a reduction in wages. Un-terminated.	33	660
Moulders, Charlottetown, P.E.I.....	Commenced February 21. Against a reduction in wages. Un-terminated.		
Patternmakers, Brantford, Ont.....	Commenced February 21. Against a reduction in wages. Un-terminated.	9	63
WOODWORKING:—			
Finishers, Toronto, Ont.....	Commenced February 19. Against a reduction in wages. Un-terminated.	37	296
PULP AND PAPER:—			
Machine operators, Thorold, Ont.....	Commenced February 8. Against a reduction in wages and for recognition of union. Un-terminated.	100	1,800
CLOTHING:—			
Garment workers, Hamilton, Ont.....	Commenced February 22. Against a reduction in wages. Un-terminated.	1,000	6,000
FOODS, LIQUORS AND TOBACCO:—			
Brewery workers, New Westminster, B.C....	Locked out February 2. For recognition of the union. Settled by arbitration. Work resumed February 21.	22	352
TRANSPORTATION:—			
Electrical workers, Vancouver, New Westminster and Victoria, B.C.	Commenced February 22. Owing to refusal of Electric Railway Company to accept award of Board of Conciliation. Un-terminated.	200	1,200

Disputes by Industries

The following is a review of the disputes by industries in the order in which they appear in the statistical table. A brief summary is given of the more important strikes.

LUMBERING.—Two strikes occurred during the month in Vancouver. The first, on February 7, involved 50 plane-men and yard labourers. It was caused by the employees refusing to work a longer day and was settled by

negotiations a week later. The second involved 81 mill workers and was on account of a wage reduction. Commencing on February 11, it remained un-terminated at the end of the month.

MINES, SMELTERS, QUARRIES, CLAY PRODUCTS, ETC.—Five hundred miners at Brule, Alta., struck on February 22 in protest against the introduction of a new dockage system. This dispute remained unsettled. Fifty-five miners at

Sydney, N.S., were on strike for two weeks, demanding the application of the Montreal agreement. The strike was settled by negotiations on February 26.

METALS, MACHINERY AND CONVEYANCES.—Five disputes, involving 218 employees with an estimated time loss of 4,440 working days was the approximation for this group. The strike of 150 employees of the steel and coal companies at Sydney was still in existence. Strikes of machinists at Brantford; metal workers at St. John; moulders at Charlottetown and patternmakers at Brantford—all in protest against wage reductions—continued in existence at the end of the month.

PULP AND PAPER.—At Thorold, 100 machine operators, papermakers, electricians and mechanics struck on February 8. The company shut down its plant last fall and resumed operations at reduced wages. Trouble commenced and the company were alleged to be weeding out prominent union men. The company then introduced the open shop system in its plant at Tonowanda. This resulted in a strike there, followed shortly by one at Thorold. At the end

of the month, indications were that the firm had resumed almost normal operations.

CLOTHING.—In this group there were six strikes, involving 1,254 employees and an estimated time loss of 9,530 working days. The chief strike in the group was that of garment workers at Hamilton which commenced on February 22. One thousand employees and six firms were involved. A proposed reduction, approximating \$7 per week for men and \$6 per week for women, caused the strike, which remained un-terminated. Strikes of garment workers at London, Sault Ste. Marie, Toronto and Montreal in protest against piece-work also were in existence.

TRANSPORTATION.—There was a strike of 200 electrical workers in Victoria, Vancouver and New Westminster owing to the refusal of the firm to accept the award of a Board of Conciliation. The Board, in a unanimous report, recommended that the existing scale of wages continue; the company refused to abide by this award, except in the case of linemen and wiremen, and announced a reduction of 10 per cent. The strike followed on February 22.

STRIKES AND LOCKOUTS IN THE UNITED KINGDOM DURING JANUARY, 1921

THE following details with regard to strikes and lockouts in the United Kingdom during January, 1921, based on returns from employers and workpeople, are taken from the February issue of the British *Labour Gazette*.

NUMBER, MAGNITUDE AND DURATION.—The number of trade disputes, involving a stoppage of work, reported to the Department as beginning in January was 44, as compared with 34 in the previous

month, and 86 in January, 1920. In these new disputes about 8,000 workpeople were directly involved, and nearly 1,000 indirectly involved (i.e., thrown out of work at the establishments where the disputes occurred, though not themselves parties to the disputes). In addition to the numbers involved in new disputes, nearly 14,000* workpeople were involved, either directly or in-

* See footnote on next page.

directly, in 49 disputes which began before January, and were still in progress at the beginning of that month. The total number of disputes in progress in January was thus 93, involving about 23,000* workpeople, as compared with 72,000 workpeople involved in 99 disputes in progress in December, 1920, and 119,000 workpeople involved in 142 disputes in progress in January, 1920.

CAUSES.—Of the 44 new disputes, 8 directly involving about 2,000 workpeople, arose on demands for advances in wages; 15, directly involving about 2,400 workpeople, against proposed reductions in wages; 4, directly involving about 300 workpeople, on other wages questions; 7, directly involving about 2,300 workpeople, on questions respecting the employment of particular classes or persons; and 10, directly involving about 500 workpeople, on other questions.

RESULTS.—During the month settlements were effected in the case of 15 new disputes, directly involving about 3,100 workpeople, and 21 old disputes, directly involving about 1,600 workpeople. Of these disputes 9, directly involving about 1,500 workpeople, were settled in favour of the workpeople; 11, directly involving about 700 workpeople, in favour of the employers; and 16, directly involving about 2,500 workpeople, were compromised. In the case of 12 disputes, directly involving about 1,400 workpeople, work was resumed pending negotiations.

The following table classifies the disputes by groups of trades, and indicates

the number of workpeople involved (whether directly or indirectly) at the establishments concerned, and the approximate time lost by these workpeople during January:—

Groups of Trades	Number of Disputes			Number of workpeople involved in all disputes in January	Aggregate loss of working days during January
	Started before 1st January	Started in January	Total		
Building.....	8	9	17	3,000	46,000
Mining and Quarrying.....	7	7	14	3,000	23,000
Metal Engineering and Shipbuilding	8	9	17	*12,000	293,000
Other Trades.....	22	15	37	4,000	39,000
Local Authority Services.....	4	4	8	1,000	7,000
Total, Jan., 1921..	49	41	93	*23,000	408,000
Total, Dec., 1920...	65	34	99	72,000	429,000
Total, Jan., 1920 ...	56	86	142	119,000	1,793,000

Of the 408,000 working days lost in January by all disputes in progress, about 333,000 were lost by disputes which began before January and were still in progress at the beginning of that month, and over 75,000 by disputes which began in the month.

*Considerable numbers of other workers are reported to have been rendered idle as a result of the strike of ship joiners, but the information at present available is insufficient to enable a trustworthy estimate of the total number to be made.

ACTION OF VARIOUS COUNTRIES UPON CONVENTIONS AND RECOMMENDATIONS OF THE FIRST INTERNATIONAL LABOUR CONFERENCE

The International Labour Office has published in its *Official Bulletin* of January 19, an account of the action taken by the countries which are members of the International Labour Organization with regard to the draft conventions and recommendations adopted at the First International Labour Conference at Washington. (The text of these conventions and recommendations appeared in the LABOUR GAZETTE for December, 1919, on pages 1440-1453.) The information contained in the present article is derived from this Bulletin.

Canada

The action of the Dominion Government with regard to these matters has already been set forth in the issue of the LABOUR GAZETTE for November last, on pages 1491-1493.

Greece

Greece is the only country up to the present which has ratified the Draft Conventions. The Greek Government, in November last, communicated to the Secretary-General of the League of Nations the formal ratification by Greece of the Draft Conventions adopted by the International Labour Conference at Washington. It has thus fulfilled, in regard to these Draft Conventions, the obligations imposed by Article 405 of the Treaty of Versailles.

The Greek Government has further incorporated in its Labour Code, in order to give effect to the Washington Recommendations, the International Convention adopted at Berne in 1906 concerning the prohibition of the use

of white phosphorus in the manufacture of matches.

As regards the other Recommendations, the Greek Government has informed the Office that it will be necessary to take legislative measures to give effect to them. As the newly-elected Chamber will have to give its special attention to the question of the revision of the Constitution, and as the time limit fixed by Article 405 of the Treaty of Versailles has nearly expired, the Government proposes, in respect of the above-mentioned Recommendations, to take advantage of the extended time limit of eighteen months provided for in the same Article.

The following countries have informed the International Labour Office that their Parliaments have voted one or more laws ratifying the Draft Conventions or giving effect to the Recommendations:

Belgium

The Bill No. 200, the provisions of which relate to the Draft Conventions concerning hours of work, the minimum age for admission of children to industrial employment, the employment of women during the night and the night work of young persons employed in industry, and which had already been voted by the Chamber of Representatives, has passed its second reading in the Senate after amendment in certain respects. The Bill has been referred back to the Chamber of Representatives.

France

A Bill authorizing the ratification of the Draft Convention concerning the employment of women before and after childbirth, which had been referred to the Commission on Insurance and Social

Welfare, came up for discussion in the Chamber of Deputies during the sitting of December 30, 1920, and was voted without discussion.

As regards the procedure to be adopted in the matter of ratification, some difficulties have arisen, and the text of a letter addressed by the Ministry of Foreign Affairs to the Secretary-General of the League of Nations, concerning this question, appears in Bulletin No. 10, of November 10, 1920. It should be added, however, that the four other Bills, which were introduced into the Chamber of Deputies on April 29, 1920, and referred back to the Labour Commission, have not been withdrawn, and that they are still before the Commission.

Great Britain

(a) The Bill giving effect to the Draft Convention concerning the minimum age for the admission of children to industrial employment, the employment of women during the night and the night work of young persons employed in industry (Women and Young Persons and Children (Employment) Bill), and the Bill incorporating the provisions of the Recommendation concerning the protection of women and children against lead poisoning (Women and Children (Employment in Lead Processes) Bill) have been passed by Parliament.

(b) The Minister of Labour made the following reply to a question which was addressed to him in the House of Commons on December 1, 1920:

"So far as regards legislation on the subject of a forty-eight hours' week, the exact form of the Bill has been continuously under discussion with the Provisional Joint Committee of the National Industrial Conference in the hope of arriving at an agreement with that Committee on the precise form which that legislation should take. In addition, it has been necessary to consider the Washington Hours Convention. . . . The Government fully intend to carry through the necessary legislation."

The following countries have informed the International Labour Office that Bills have been presented to Parliament:

Argentina

By letter of October 5, 1920, the Minister of Foreign Affairs of the Argentine Republic informed the Secretary-General of the League of Nations that the executive authorities of the Republic gave their approval on September 8 last, to the Draft Conventions and Recommendations adopted at Washington. On the same day the Draft Conventions and Recommendations were submitted to the National Congress for consideration.

Chili

Three Bills, which had been prepared before the receipt of the Washington Convention, have been presented to the National Congress. They apply:

(a) To hours of labour (this Bill shows considerable difference from the Washington Convention);

(b) To public health and industrial security;

(c) To the employment of women and children. (This Bill only prohibits the employment of children under the age of 12 years. The night work of women and young persons under 10 years of age is also prohibited. Young persons between the ages of 16 and 18 years may not be employed in occupations dangerous to their health and morals.)

The provisions of the Washington Convention concerning these questions will be taken into consideration during the discussions.

Czecho-Slovakia

The Government of the Republic submitted to the National Assembly, on September 4, 1920, a motion for the ratification of the Washington Draft Conventions concerning the limitation of the hours of work in industrial establishments to eight in the day and forty-eight in the week, the employment of women during the night and the mini-

imum age of admission of children to industrial employment.

In the days following November 13, 1920, these three Draft Conventions were presented to the Chamber of Deputies in accordance with the procedure adopted by Czecho-Slovakia in the matter of ratifications. They will next go to the Committee on Political and Social and Foreign Affairs of the Senate. As these three Draft Conventions do not entail any modification in existing legislation, which is already in advance of them, it may be hoped that they will be ratified in the near future.

As regards the other Draft Conventions, it is intended to follow the same procedure, but their ratification is in a less advanced stage. They were laid before Parliament in the days following November 13, 1920, and the following measures have been taken with regard to them:

The Government has introduced into the National Assembly of the Republic a Bill concerning the organization of employment agencies and unemployment insurance. The Ministry of Agriculture, however, decided that the supervision of employment agencies for agricultural labourers should be placed under its charge, whilst the Ministry of Social Welfare is in favour of a uniform organization for all classes of workers, and the question is under discussion.

The ratification of the Draft Convention concerning the employment of women before and after childbirth necessitates modifications to two existing Acts: (1) Sickness Insurance Act; (2) The Eight Hour Day Act of December 19, 1918. As regards the first of these Acts, the Minister of Social Welfare has brought a series of new provisions modifying the present system of sickness insurance before the National Assembly. As regards the second Act, the Government intends to bring into Parliament very shortly a special Bill modifying its provisions, and the text of this Bill is at present being prepared. The provisions of this proposed legislation,

which relate to the Washington Conventions, do not appear to give rise to any opposition. But, since other provisions contained in these measures are of a controversial character, their passage through Parliament may be delayed. In spite of these difficulties there is reason to believe that the ratification of both the Draft Conventions mentioned above will be effected.

With regard to the Draft Convention concerning the night work of young persons employed in industry, the Government is at present engaged in drafting the final form of a Bill prohibiting the night work of young persons under the age of eighteen years. The ratification of this Draft Convention may be delayed in view of the action of the Czecho-Slovakian employers who have requested certain exceptions not provided for in the Draft Convention. These exceptions concern the night work of young persons in the enamel and porcelain trade and in coal mines. The employers appear to have promised to withdraw their objections in the first of these cases, if they could be assured that other countries, and especially Germany, would adopt this Draft Convention. More importance is attached by the Government to the second objection, and it has asked whether, in virtue of the provisions of Article 7 of the Draft Convention which allow the prohibition of night work to be suspended "when in cases of serious emergency the public interest demands it, Czecho-Slovakia could be authorized, whilst adhering to the Convention, temporarily to suspend its application as regards coal mines."

The Government has taken the following measures with regard to the Washington Recommendations: (a) It has proposed to the National Assembly that Czecho-Slovakia should adhere to the Berne Convention concerning the prohibition of the use of white phosphorus in the manufacture of matches; (b) It is preparing regulations with a view to the protection of the workers against anthrax and lead poisoning, which will be completed in the near future.

Italy

The discussion of the Bill ratifying the six Washington Draft Conventions, which was introduced into the Chamber of Deputies on July 24, 1920, has been delayed by the re-organization of the Parliamentary Commissions. However, the Ninth Commission, which is concerned with questions relating to labour legislation, embarked upon a preliminary examination of the Washington Conventions at its first meeting. During the short discussion which took place, several members of the Commission intimated that it might be desirable to modify the provisions of the Convention concerning the minimum age for admission of children to industrial employment, in order that this question might be co-ordinated with the connected question of primary education.

The Commission invited two of its members, Messrs. Turati and Fino, to submit a detailed and analytical report on the question at the next sitting of the Commission which should take place in the second half of January, 1921.

Switzerland

On December 10, 1920, the Federal Council addressed a Message to the Federal Assembly, in which, after examining the legal questions which arise in Switzerland as regards the presentation of the Washington Draft Conventions and Recommendations to the competent authorities, and their possible execution, from the point of view of Swiss public law, it recommends the measures which it considers should be taken with regard to each of these decisions.

The Federal Council proposes that Switzerland should adhere to the Draft Convention concerning the minimum age for admission of children to industrial employment, the night work of young persons employed in industry and the employment of women during the night, and, further, that effect be given to the Recommendation concerning the protection of women and children against lead poisoning.

The adaptation of existing legislation has already taken place as far as the undertakings covered by the Federal Factory Act are concerned. As regards other groups of undertakings to which these Conventions apply, the Federal Council, in an Appendix to its Message, submits a Bill "the object of which is to establish for Switzerland the basis of adhesion to the three Conventions mentioned above and to give effect to the Recommendation concerning the protection of women and children against lead poisoning." This Bill, the text of which is given in the Message, is recommended to the Federal Assembly for adoption. It is entitled "Federal Act concerning the Employment of Young Persons and Women in Workshops."

The Federal Council also recommends the adhesion of Switzerland to the Draft Convention concerning unemployment, and proposes to the Federal Assembly the adoption of a decree ratifying this Draft Convention.

As regards the Draft Convention concerning the employment of women before and after childbirth, the Federal Council declares that the financial means necessary for the immediate execution of this Convention are wanting, and that the "only way of procuring the necessary resources is by the creation of a system of maternity insurance."

It adds that "the whole question will be made the subject of a thorough examination when the revision of sickness insurance decided upon by the Federal Council on the 27th September, 1920, is carried out." For these reasons the Federal Council proposes: "(1) that the Convention should not be adhered to; (2) that the declaration to the Federal Council to the effect that the introduction of a system of maternity insurance is being considered should be noted and approved."

As far as the Draft Convention limiting the hours of work in industrial undertakings to eight in the day and forty-eight in the week is concerned, "Switzerland has already carried out the principle of the eight-hour day as regards

undertakings covered by the Federal Factory Act, by the Federal Act concerning hours of labour in factories of the 27th June, 1919, and for railways and other transport undertakings and systems of communication by the Federal Act concerning hours of labour on railways and other transport undertakings and systems of communication of the 6th March, 1920, accepted by the people at the Referendum of the 31st October, 1920. Further, the eight-hour day has been adopted in a large number of workshops not covered by the Federal Factory Act by agreement between employers and workers."

The adaptation of the Federal Factory Act to the Conventions does not appear to present any serious difficulties. On the other hand, the Federal Council considers that it is impossible to adapt the recently voted Act concerning hours of labour in transport undertakings and systems of communication to the Washington Convention. The Council considers, further, that the provisions of the Convention "are not applicable to workshops." It does, however, consider that these groups of undertakings should be subject to regulation, and the Department of Public Economy is at present engaged in preparing a Bill for this purpose.

As a result of these considerations the Message proposes: "(1) that the Convention should not be adhered to; (2) that the declaration of the Federal Council, to the effect that a Bill concerning hours of labour in workshops and commercial undertakings, which will take into account the general interests of these groups, which will be submitted to the Federal Assembly, should be noted and approved."

With regard to the Recommendation concerning unemployment, the Message proposes "that the Federal Assembly should take note of the declarations of the Federal Council that Bills concerning unemployment insurance and employment agencies will be submitted in

due time, and, further, that no other steps be taken."

The Federal Council considers that the question dealt with by the Recommendation concerning reciprocity of treatment of foreign workers, has not as a whole been sufficiently studied up to the present for it to be decided to proceed to an immediate reform of Swiss legislation. It therefore proposes for the time being to take no further action with regard to this Recommendation.

As regards the Recommendation concerning the establishment of National Health Services, the Message points out that "effective supervision is exercised over undertakings covered by the Federal Factory Act," and adds that measures of supervision may be provided for in the future Federal Act concerning employment in workshops. It considers "that it is neither timely nor necessary to take special legislative measures."

The Message indicates, in respect of the question of the creation of a special health service in direct relationship with the health service of the International Labour Office, that, if the Federal decree instituting a Federal Labour Office comes into force, this Office would probably assume that function.

The Message concludes by proposing to the Federal Assembly to note and approve the declaration of the Federal Council on this point.

It is not proposed to take any action to give effect to the Recommendation concerning the prevention of anthrax, as this Recommendation has no bearing in Switzerland.

Finally, the Council does not propose to take any action as regards the Recommendation concerning the application of the Berne Convention of 1906 on the prohibition of the use of white phosphorus in the manufacture of matches, as it has already been carried out by Switzerland.

The following countries have informed the International Labour Office that the Washington decisions are under examination with a view to the preparation of Bills to be laid before their respective Parliaments.

South Africa

The Secretary for Mines and Industries of the Union of South Africa has informed the International Labour Office that the Draft Convention limiting the hours of work in industrial undertakings has been accepted in principle by the Government. An Hours of Work Act, including transport by sea and the fishing industry and other industrial undertakings, has been prepared for consideration by Parliament.

Germany

The Washington Draft Conventions and Recommendations were examined in the first place by the Ministry of Labour which prepared the necessary legislative measures. These measures, with the exception of those relating to the three Draft Conventions concerning the limitation of hours of work in industrial establishments, the night work of young persons employed in industry, and the employment of women before and after childbirth, have already been examined by the Federal Cabinet and are to be sent to the Federal Council in the near future.

The three Conventions above-mentioned were laid before the Federal Cabinet during December, 1920. When the draft legislative measures have all been examined by the Cabinet, they will be sent to the competent authorities, which are, according to the documents received by the International Labour Office, the Federal Economic Council, the Federal Council and the Reichstag.

Denmark

The Minister of the Interior has informed the International Labour Office

that the Draft Conventions and Recommendations adopted by the Washington Conference have been submitted for examination to the Central Council, the Ministry of Justice, the Labour Council, and the Commission on Hours of Labour. It is hoped that these several Departments will make their reports to the Ministry of the Interior in sufficient time to allow of the presentation to Parliament of the Draft Conventions and Recommendations before the expiry of the time limit provided for in Article 405.

The Office has further been informed that Denmark invited Sweden, Norway, and Finland to take part in a Joint Scandinavian Conference which was to be held in January at Copenhagen, with the object of considering the practical means of carrying out the Washington decisions.

Spain

An unofficial note, which appeared in the press on the subject of the deliberations of the Cabinet at its meeting on September 22, 1920, intimates that the Minister of Labour reported on the preparatory work done by the Ministry of Labour and by the Institute of Social Reform with regard to the ratification of the Washington Draft Conventions by Parliament.

It was decided that the Minister of Labour should introduce a Bill for this purpose, and that subsequent adaptation of the Conventions existing to Spanish legislation should be undertaken by the Ministry of Labour.

According to unofficial information received by the Office, it is believed that the Washington decisions will be presented to the Chambers before any other measures dealing with social welfare.

India

The Government of India, after consultation with the Provincial Governments, has completed its examination of the Washington Draft Conventions and Recommendations. There is reason to

believe that the Government intends to submit proposals to the Legislative Council at an early date.

It is probable that the Government will not be in a position to indicate the decisions which may be taken with regard to the Draft Conventions and Recommendations within the time limit of one year provided for in Article 405, but this communication will be made before the Geneva meeting of the Conference in 1921.

Japan

Some legislative measures will be necessary to put the Washington decisions into force. For this purpose Bills have been prepared and are to be laid before the Legislative Office of the Japanese Cabinet for examination. There is reason to hope that Japan will ratify the Washington Draft Conventions within the extended period of eighteen months provided for in the Treaty of Versailles.

Norway

The Office was informed in November that the Department for Social Affairs was engaged in examining the question of the ratification of the Draft Convention concerning unemployment. No further information has been received from Norway since this date, but this country was invited by Denmark to take part in a Scandinavian Conference which was to meet at Copenhagen in January, 1921, for the purpose of considering the practical means for the carrying out of the Washington decisions.

Roumania

The International Labour Office is advised, under date November 12, that the Roumanian Government intends to present, at an early date during the course of the next session of Parliament, the following Draft Conventions, adopted by the Washington Conference, for ratification:

- (1) Draft Convention limiting the hours of work in industrial undertakings to eight in the day and forty-eight in the week;
- (2) Draft Convention concerning the employment of women before and after childbirth;
- (3) Draft Convention concerning the employment of women during the night;
- (4) Draft Convention concerning the night work of young persons employed in industry;
- (5) Draft Convention fixing the minimum age for admission of children to industrial employment.

The Roumanian Government adds that with regard to the Recommendations concerning unemployment, reciprocity of treatment of foreign workers, the prevention of anthrax, the protection of women and children against lead poisoning and the application of the Berne Convention of 1906 on the prohibition of the use of white phosphorus in the manufacture of matches, "it will do anything possible in order that, taking account of national economic conditions, they may be put into force by means of Ministerial Decrees."

Sweden

With regard to the revision of the Swedish Eight Hour Act with a view to making it more in conformity with the Draft Convention concerning hours of work, it should be mentioned that the Riksdag requested the Government to undertake this revision.

Owing to the differences of opinion which have arisen with regard to the modification of existing law and the necessity of making it agree on the one hand with the Draft Convention and on the other hand with the wishes of the Riksdag, it is probable that progress will be slow and not without difficulty.

The Government has, however, instructed the Department of Social Wel-

fare to proceed with an enquiry as to the amendments necessary to adapt the Eight Hour Act more completely to the needs of practical life.

Although Sweden has not yet ratified the Draft Convention concerning unemployment, the Government has taken steps to apply the provisions of Article 1 of the Draft Convention. It should be added that Sweden was invited by Denmark to take part in a Joint Scandinavian Conference which was to be held at Copenhagen in January last, in order to consider the practical means of carrying out the Washington Draft Conventions.

Venezuela

The Congress of Venezuela has authorized the executive power of the Republic to proceed with the examination of the Washington Draft Conventions and Recommendations and with the preparation of the Bills relating thereto. There is reason to hope that these Bills will be submitted to Congress in the near future, and that Venezuela will be in a position to fulfil the obligations imposed by Article 405 of the Treaty of Versailles.

Other Countries

The Nicaragua Government reports that those provisions of the Draft Conventions which interest particularly the Ministry of Public Works have been submitted to it for examination.

The Government of Panama has submitted the text of the Draft Conventions and Recommendations to the examination of the Secretary for Development and Public Works.

The International Labour Office is informed that the Government of Poland hopes to submit the Draft Conventions

and Recommendations to the Competent Authorities within the prescribed period.

The Government of Siam has informed the International Labour Office that the Draft Conventions and Recommendations have been submitted for earnest and sympathetic consideration to a Code Commission under the Ministry of Justice.

According to unofficial information the Government of the Kingdom of the Serbs, Croats, and Slovenes is not at present in a position to submit the Draft Convention and Recommendations to Parliament, as the new Constituent Assembly will be concerned with the single question, the Constitution of the realm. If, however, the opening of the ordinary session of parliament is long delayed the Government is disposed to consider the possibility of ratification by royal decree after consulting the workers' and employers' organizations.

No information has been received concerning measures which may have been taken by the states of Albania, Bulgaria and Costa Rica, which were but recently admitted as members of the League of Nations and consequently of the International Labour Organization at the First Assembly of the League.

The Ministry of Foreign Affairs of Salvador has informed the International Labour Office that no steps have as yet been taken with regard to ratification of the Draft Conventions and that no bill for this purpose has yet been presented to Congress.

The International Labour Office has been informed that the Government of Finland was invited by Denmark to take part in the Joint Scandinavian Conference at Copenhagen in January in order to consider the practical means of carrying out the Washington Decisions.

LABOUR AND WAGES IN VARIOUS INDUSTRIES IN CANADA IN 1919

Report by the Dominion Bureau of Statistics on (a) the rubber industry; (b) the leather, boot and shoe industry; (c) the meat industry; (d) the flour milling industry

THE Dominion Bureau of Statistics continues its survey of the industries of Canada in 1919 with preliminary reports on the rubber (including rubber goods and rubber boots and shoes), leather boots and shoes, meat and flour milling industries.

[Rubber Industry

RUBBER GOODS.—In this section of the rubber industry Ontario had eighteen plants, Quebec three, and British Columbia one. The capital invested in these plants amounted to \$28,584,715, of which \$27,706,575 was invested in Ontario. The number of persons employed by classes of employment, and the amount of wages and salaries paid, were as follows:—

Classes of employees	No. of employees		Salaries and wages
	Male	Female	
			\$
Officers, superintendents, managers.	213	2	555,772
Clerks, stenographers, etc.....	692	299	954,346
Employees on wages, average number.....	4,919	710	5,493,910
Totals.....	5,824.	1,011	7,004,028

Classified according to weekly wage payments the number of employees by age and sex in wage groups is presented in the following summary table:—

Specified wage groups	Over 16 years		Under 16 years		Total No. of employees
	Male	Female	Male	Female	
Under \$10 per week.....	145	84	24	7	260
\$10 to under \$15 per week.....	337	299	26	24	686
\$15 to under \$20 per week.....	1,281	225	24	7	1,537
\$20 to under \$24 per week.....	1,287	42	2	1,331
\$24 to under \$28 per week.....	1,174	7	1	1,182
\$28 to under \$30 per week.....	458	2	1	461
\$30 per week and over....	1,324	5	2	1,331
Totals...	6,006	664	80	38	6,788

The cost of fuel and materials and miscellaneous expenses amounted to \$23,-621,172, while the selling value of the principal products at the factories or works was \$36,651,640.

*RUBBER BOOTS AND SHOES.—There were ten plants in this section of the rubber industry, five being in Ontario, with \$5,299,313 invested, and five in Quebec, with \$8,903,566. The numbers and earnings of persons employed are shown in the following table:

Classes of employees	No. of employees		Salaries and wages
	Male	Female	
			\$
Officers, superintendents and managers.....	73	4	209,834
Clerks, stenographers, etc.....	358	148	499,110
Employees on wages, average number.....	3,079	2,180	3,834,845
Totals.....	3,510	2,332	4,543,789

The distribution of wage groups was as follows:—

Specified wage groups	Over 16 years		Under 16 years		Total employees
	Male	Female	Male	Female	
Under \$10 per week.....	304	667	98	93	1,162
\$10 to under \$15 per week.....	671	909	27	47	1,654
\$15 to under \$20 per week.....	1,025	604	6	10	1,645
\$20 to under \$24 per week.....	669	82	1	751
\$24 to under \$28 per week.....	355	5	360
\$28 to under \$30 per week.....	121	1	122
\$30 per week and over.....	205	205
Totals.....	3,349	2,268	132	150	5,899

The cost of fuel and materials and miscellaneous expenses amounted to \$10,338,461, and the selling value of the principal products at the factories was \$19,351,794.

The Leather Boot and Shoe Industry

The plants engaged in the manufacture of leather boots and shoes were distributed as follows: Quebec, 91; Ontario, 56; New Brunswick, 5; Nova Scotia, 4; British Columbia, 5. The total capital investment in the industry in Canada was \$38,680,581, of which \$24,894,251 was in Quebec and \$10,863,924 in Ontario. The number and earnings of employees by classes was as follows.—

Classes of employment	No. of employees		Salaries and wages
	Male	Female	
Officers, superintendents and managers.....	449	18	1,411,387
Clerks, stenographers and other salaried employees.....	988	376	1,515,650
Wage earners, average number.....	8,298	4,846	10,248,437
Outside piece-workers.....	20	346	75,270
Totals.....	9,755	5,586	13,250,744

The employees were classified by weekly payments as follows:—

Groups of weekly wage payments	Over 16 years		Under 16 years		Total No. of employees
	Male	Female	Male	Female	
Under \$5 per week.....	211	221	103	77	612
\$5 but under \$10 per week.....	961	1,537	306	290	3,094
\$10 but under \$15 per week.....	1,522	2,240	119	80	3,961
\$15 but under \$20 per week.....	1,910	926	51	37	2,924
\$20 but under \$24 per week.....	1,542	249	36	18	1,845
\$24 but under \$28 per week.....	1,309	54	35	15	1,413
\$28 but under \$30 per week.....	498	9	11	2	520
\$30 per week and over.....	1,386	31	30	1	1,448
Totals.....	9,339	5,267	691	520	15,817

The following table gives by provinces the number of employees, amount of salaries and wages, cost of materials and value of products.

Province	Number of employees	Salaries and wages	Cost of materials	Value of products
		\$	\$	\$
Quebec.....	9,746	8,278,427	27,408,026	41,689,124
Ontario.....	4,757	4,248,508	10,860,496	18,084,695
New Brunswick.....	488	430,742	1,520,603	2,268,579
Nova Scotia.....	210	148,178	448,686	756,927
British Columbia..	140	144,889	285,885	519,803
Canada, totals..	15,341	13,250,744	40,523,696	63,319,128

The Meat Industry

The plants covered in this report include 82 abattoirs and packing houses. They are widely distributed throughout Canada, 9 being in Prince Edward Island, 2 in Nova Scotia, 6 in New Brunswick, 15 in Quebec, 28 in Ontario, 7 in Manitoba, 2 in Saskatchewan, 7 in Alberta and 6 in British Columbia. The total capital investment was \$93,363,791, the share of Ontario being the largest, namely, \$50,232,669, followed in the order named by Alberta, Quebec, Manitoba, British Columbia, Saskatchewan, Prince Edward Island, New Brunswick, and Nova Scotia. The

numbers and earnings of employees by classes are shown in the following table:—

Classes of employment	Number of employee		Salaries and wages
	Male	Female	
Officers, superintendents, managers, Clerks, stenographers and other salaried employees.....	335	1	\$ 1,251,385
Employees on wages, average number.....	2,193	658	2,997,699
.....	9,242	793	11,053,304
Totals.....	11,770	1,452	15,302,388

Classified in wage groups by age and sex the numbers of employees were as follows:—

Specified wage groups	Over 16 years		Under 16 years		Total No. of employees
	Male	Female	Male	Female	
Under \$5 per week.....			31	13	44
\$5 but under \$10 per week.....	80	124	17	6	227
\$10 but under \$15 per week.....	415	452	37	6	910
\$15 but under \$20 per week.....	1,336	211	16	4	1,567
\$20 but under \$24 per week.....	4,037	12			4,049
\$24 but under \$28 per week.....	2,875	1			2,876
\$28 but under \$30 per week.....	687	2			689
\$30 per week and over.....	1,626				1,626
Totals.....	11,056	802	101	29	11,988

The cost of fuel and materials (including animals slaughtered), and miscellaneous expenses totalled \$195,383,531. The total value of all products was \$233,936,913.

The Flour Milling Industry

The number of plants in Canada in 1919 was 1,255, distributed as follows: 21 in Prince Edward Island, 38 in Nova Scotia, 42 in New Brunswick, 428 in Quebec, 588 in Ontario, 38 in Manitoba, 47 in Saskatchewan, 49 in Alberta, and 4 in British Columbia. In the previous year the plants reporting operations totalled 1,183, the gain of 72 plants in 1919 being

entirely due to an increase of 144 plants in the province of Quebec, all the other provinces showing proportionate declines in the number reporting, Ontario leading with 34 plants less. The total capital invested in the industry in Canada was \$76,411,423, the largest amounts being in Ontario, Quebec, Manitoba, and Alberta. The number and earnings of employees by classes in 1919 are shown in the following tables:—

Classes of employees	No. of employees		Salaries or wages
	Male	Female	
Officers, superintendents, and managers.....	372	6	\$ 1,180,954
Clerks, stenographers, and other salaried employees.....	763	290	1,250,653
Employees on wages average number.....	5,825	145	5,651,663
Totals in 1919.....	6,960	441	8,08,270
Totals in 1918.....	6,816	549	7,525,070

Classified according to weekly wage payments within specified groups of weekly wages, the number of persons at employment by age and sex was as shown in the accompanying table:

Specified wage groups	Over 16 years		Under 16 years		Total No. of employees
	Male	Female	Male	Female	
Under \$5 per week.....	8		1		9
\$5 to under \$10 per week.....	117	51	21		189
\$10 to under \$15 per week.....	697	110	2		809
\$15 to under \$20 per week.....	1,313	25			1,338
\$20 to under \$24 per week.....	1,236	21			1,257
\$24 to under \$28 per week.....	1,948	6			1,954
\$28 to under \$30 per week.....	266				266
\$30 per week and over.....	781				781
Totals.....	6,366	213	24		6,603

The total cost of materials (including grain), together with other expenses, was \$239,698,781 in 1919, while the selling value at the mills of all products was \$262,763,392 in the same period.

VOCATIONAL OPPORTUNITIES IN THE INDUSTRIES OF ONTARIO

Bulletins issued by the Ontario Department of Labour

THE Ontario Department of Labour continues its survey of Vocational Opportunities in the Industries of the Province with several new Bulletins. (Bulletins 1 to 4 were reviewed in the LABOUR GAZETTE, October, 1920, page 1308, and December, 1920, p. 1618). The purpose of the series is to supplement the work of the Employment Bureaus by furnishing boys and girls on leaving school with information as to the prospects offered by the several industries and thus assist them in choosing their life work.

Boots and Shoes, Harness and Saddlery

Bulletin No. 5 gives an account of the opportunities in the boot, shoe and leather-working industries. It describes the process of shoe-making through its three stages, namely, the cutting, the stitching and fitting, and the "making," including the lasting and putting on of soles and heels. At the present time a shoe passes through more than a hundred hand and machine operations, done by as many different workers. Most of the work is skilled, in the sense that efficiency depends primarily on the worker rather than on the machine. There is no real apprenticeship in the shoe trade. It is stated that it is more difficult to give training in the shoe shop than in other work as so few helpers are employed. Except in the heel setting process, boys are not assigned to assist the skilled workers at their machines and new recruits have therefore to be specially taught. In this connection the report points out the need for instruction in shoe making in the technical schools of Ontario.

Already the Department of Education has expressed willingness to organize classes in any part of the Province, if a number of workers in the trade desire it, and if a suitable teacher can be obtained. With the exception of cutting and repairing, any operation in a shoe factory can be learned in a period of from eight to twelve months, according to the learner's adaptability. Ability to earn good wages depends on the worker's speed as an operator of his machine. A boy usually spends from two to three years in the factory before he is set to work upon major operations, but even before that time he may earn good wages. The majority of employees in the shoe trade are men. In 1917 men were in the proportion of 63 to 37 female workers, the latter being employed in the stitching room and in repairing and packing. The results of the investigation are summarized in the report as follows:—"The manufacture of boots and shoes is a growing industry in Ontario. Opportunities are open to several types of worker. The man who has good judgment and the power to think quickly will find this an asset in the cutting department. Those who are physically strong and able to stand the strain of standing all day long and doing heavy work are needed on the machines. For workers with executive ability there are positions as foremen and superintendents. The majority of the workers in Ontario are Canadian or British born. Health conditions are, on the whole, good, although the amount of tuberculosis is slightly above the standard. The worker can in most cases continue his work until an advanced age. The result is that promotion is generally slow, but this is counterbalanced by the fact

that wages, even in the less skilled operations, are reasonably high. The hours of work range from 49 to 59 per week, and for less skilled workers there are periods of unemployment when work is slack. Organized unions were found in all the larger towns." In the year 1918, 21.3 per cent of the total wage earners in the boot and shoe factories observed received from \$15 to \$20 weekly, but the largest single group of male workers received from \$20 to \$25 weekly. Slightly more than half the male workers received less than \$20, while 54 per cent of the female workers received less than \$12. The average yearly wage in the boot and shoe industry in 1917 was \$615.

Harness-making also is classed as a skilled trade, although the deftness and experience required in the days of hand work is now less essential owing to the universal use of machinery. Workers in this industry are mostly employed steadily, the average number of men employed throughout the year being 96.3 per cent of the number employed in the month of greatest employment. Employment for women is less steady, the average of the year being 82 per cent. The proportion of executives to wage earners is especially large in this industry, opportunity of advancement being thus opened to ambitious workers. Training for the work is given in the factory, and requires from two to five years. The majority of the workers are of Canadian or British birth. Wages compare favourably with those in other industries, over 43 per cent of the male wage earners and nearly 2 per cent of the female wage earners receiving over \$20 per week in 1918. The average annual wages paid in 1917 were \$657.

Textiles

In Bulletin No. 6 an account is given of the evolution of textile manufacture in Canada from a home craft to an industry conducted entirely by factory labour. This transition took place in

Ontario earlier than in Quebec and even today 82 per cent of the factory-made hosiery and knit goods and 77 per cent of all factory-made woollen goods manufactured in Canada come from the former province. The textile industry in Ontario received a strong impetus in recent years through war orders, and it is anticipated that the growth will continue, and that increasing opportunities will be thus afforded to young workers adopting it as a life calling. Among the higher positions open to boys the best are on the mechanical side, skilled machinists being always in demand. There are also good chances of advancement to responsible positions on the executive side for boys with administrative gifts, while the designing and dyeing departments are likely before long to offer good scope for the development of artistic skill. Designing, however, has not yet come into its own in Canada, most designs now adopted being copied from those made in the United States. Boys receive training for textile work either at a technical school or, more commonly, by actual experience in a factory. A beginning in technical training for textile workers was made during the 1919-20 session at Almonte, Ont., and the measure introduced in the Legislature in May, 1920, makes provision for textile instruction in Provincial Technical schools. In 1917 more than two out of every 100 workers in carpets and woollen goods were officers, superintendents, or managers, while in woollen yarn less than two, and in cottons less than one in 100 attained to these positions. A boy who has acquired considerable mechanical knowledge may in time, it is stated, become a machine fixer or foreman, or even a superintendent. Of the workers in woollen goods, cottons, hosiery and knit goods, almost 44 per cent are male and slightly over 56 per cent female; men do the sorting, picking, carding, scouring, dyeing and drying, and most of the work on the woollen mules or spinning machines. Worsted spinning, which requires less walking

and more deftness than the woollen mules, is usually done by women. Both sexes work in the worsted department on the gilling, combing and drawing, but females predominate. Of the total workers in woollen and worsted spinning 63 per cent are male; twisting, except for foremen and boy helpers, is done by women. Special opportunities for girls in a textile mill are in the designing rooms and in card cutting. The best paid positions for women are those of forewomen, experienced loopers, knitters, weavers, winders and spinners.

At the present time a serious drawback to textile work as an occupation lies in the variation of weekly wages caused by slack time, waits for the loom-fixer, etc., bad material and deductions for spoiled work. Thus, in the typical case of a girl, a potential yearly income of \$468 was reduced to \$423. In regularity of employment, however, the cotton and woollen mills stand high in comparison with factories in other industries. The average yearly salaries in the textile industry in 1917 were as follows: Cottons, \$505; hosiery and knit goods, \$504; woollen goods, \$757; woollen yarn, \$653; carpets \$631. The number of hours worked each week in the same year in the factories ran from 44 to 57, with an average of 52 hours. The textile trades are poorly organized, Toronto being the only place in Ontario where a union exists. Two firms recognize the union and employ only those workers who belong to it.

Bread, Biscuits and Confectionery

In Bulletin No. 7 a sketch is given of conditions in the bread, biscuit and confectionery industry. Since the advent of the factory this industry has risen to a high rank of importance, being fifth in the Postal Census enumeration of industries employing over one thousand workers in 1915. The Euro-

pean demand for Canadian made biscuits and confectionery has continually increased during the last four years, especially for high-grade products. Chances of advancement are good, officers being to all workers in the proportion of 3 to 100. For such positions scientific knowledge and administrative ability are necessary. Skilled workers receive good wages and are assured of employment owing to the steady demand for foodstuffs. Besides these, a large number of unskilled workers and machine tenders are employed. Most occupations are learned in the factory, and the training period is short. Workers in a chocolate factory are usually men, except in the dipping, packing, and bar rooms. The chief positions are those of the "chocolate man" in charge of the making of chocolate from the blending to the refining, the cream man, and the candy-maker. A man is also usually in charge of each room in the factory, but dipping and packing are supervised by a woman. Conditions of work are said to be pleasant, quiet and healthful, as modern factories are light and well ventilated, the hot air being carried off.

In the bread factories the work is done by night and by men who must be strong and able to stand heat. Knowledge of baking provides an opportunity for a man to start in business for himself, this requiring small capital. In biscuit factories the better-paid positions for men are those of peelers, brakiers, oven men and mixers, and for women, those of forewomen and packers. At the present time a large proportion of the skilled operatives are from Great Britain. The working day varies from 8 to 10 hours. Employment is fairly steady, the average number of men employed throughout the year being 93.2 per cent, and of women, 88.4 per cent of the number employed in the month of greatest employment. The busy season is from the beginning of September to Christmas. The average annual income of wage-earners in the

bakeries, and biscuit and confectionery plants in 1917 was \$778. In 1918, nearly half of the male employees in the bakeries studied received less than \$20 weekly, while about 29 per cent received from \$20 to \$25, and about 22 per cent received over \$25 a week. In the biscuit factories, 24 per cent of the male workers in the baking department received under \$7 a week (of employees in the entire group 6.7 per cent were children under 16 years of age); in the braking and peeling department wages ranged from \$15 to \$25; in the labelling department more than half the female employees were paid less than \$9 a week, while about one-third received from \$9 to \$12; the wages of mixers and ovenmen ranged between \$15 and \$30; in the packing department most of the male employees received from \$15 to \$20, while of the females 40 per cent earned under \$10 weekly, and 58 per cent earned from \$10 to \$15. The wages in the various departments of the confectionery factories were similar to these figures.

Furniture and Upholstery

In Bulletin No. 8 the furniture and upholstery industry is described as "more promising than formerly to the general run of workers who want a steady trade and are not particularly ambitious." The industry has greatly expanded in recent years to provide for the higher standard of living and for the greater interest in their homes that is now increasingly manifested by Canadian householders. There are good openings for men of mechanical or artistic bent. For cabinet making an eye for line and a knowledge of design are required, as the finished article depends for its excellence largely upon individual judgement. At the present time there is a strong demand for technically trained men as foremen and

superintendents. There is no definite system of apprenticeship for the trade as a whole. In a good shop there are usually some boys between the ages of 15 and 17 years who are under-going instruction by the foreman. After about three years of such instruction the apprentices become journeymen earning standard wages. Upholstering takes about a year to learn, and cabinet making about three years. "Cabinet making," the report says, "is one of the very few hand industries which have survived from olden times—it still retains the special value that is possessed by all work in the nature of a craft." The cabinet maker values his craft because of its interesting and independent character and because he can improve his position by training. The Department of Education, it is stated, is willing to arrange for the holding of night classes in Furniture and Upholstery if a number of workers in the trade desire it, and if a suitable instructor can be secured. Health conditions in these industries are uniformly good. The working week in 1918 was from 55 to 59 hours. In cabinet making and upholstery employment is steady throughout the year; in some lines there are slack seasons, but workers are not usually laid off. About 75 per cent of the workers belong to trade unions. In 1918 almost 80 per cent of the male workers received \$15 and over weekly, and of the female wage earners 43.4 per cent received \$12 and over. Women's wages are usually low as women are seldom employed on skilled work. The yearly average income of wage earners in 1917 was \$610. Since 1918 wages in the industry have been raised considerably.

ANNUAL REPORT OF THE UNITED STATES DEPARTMENT OF LABOUR FOR 1920

THE annual report of the United States Labour Department for the year ending June 30, 1920, contains an historical review of the Department, beginning with the earliest agitations for a national labour office, which began shortly after the period of the Civil War. This demand, after half a century of agitation, was finally and fully conceded on March 4, 1913, when President Taft signed an act creating the present Department of Labour, the purpose of which is stated as follows: "The purpose of the Department of Labour shall be to foster, promote and develop the welfare of the wage earners of the United States, to improve their working conditions, and to advance their opportunities for profitable employment." Under the supervision of the new department came the Bureau of Labour Statistics, the Children's Bureau, the Bureau of Immigration and the Bureau of Naturalization. To these were later added the Women's Bureau and the Divisions of Conciliation, and Negro Economics, and the United States Employment Service. The appointment of the first Secretary of Labour fell to President Wilson, who chose Mr. W. B. Wilson, a former secretary of the United Mine Workers of America. The present report is in the nature of a valedictory message and is a summary record of Secretary Wilson's tenure of the office, issued on the eve of the passing of the late administration. "A survey of the work of the Department of Labour," he declares, "identifies it closely with the most extraordinary period of our

history. It is a distinct landmark of the great economic and political changes that have startled the world into a new social life. . . . It has been with full confidence that the unfair old is giving way to a fairer new in industrial as well as in national and international life, that the Department of Labour has been organized, its purposes promoted, and its functions thus far administered."

Employment Service. — Considerable space is given in the report to an account of the United States Employment Service. "Though instituted primarily as a war measure the demonstrated utility of the service as a means of equalizing labour supply and demand, and of meeting the recurrent problem of unemployment, commended it to all thoughtful observers as a permanent function of the National government." The report refers to the good results obtained by national employment services in Canada and other countries, and recommends that action be taken to adopt the principles of Article 11 of the draft convention concerning unemployment which was unanimously adopted by the International Labour Conference of the League of Nations held in Washington in November, 1919, favouring the establishment of free public employment agencies under public control. In this connection the report refers to a condition affecting the employment of Labour in the United States which applies equally to Canadian labour: "The greater mobility sometimes attributed to the American worker is more than

neutralized by the distance that separates him from his opportunity and by his ignorance of its existence or whereabouts. If then, the European countries deem a unified employment service an essential feature of their industrial organization, how much more essential must it be under the more difficult and less stable conditions of industry which obtain in the United States?" Important work was accomplished by the Employment Service during the year in supplying harvest labour for the grain-growing states of the Central West. A zone clearance office was established at Kansas City, Kansas, and a publicity campaign was undertaken to secure harvest workers. By agreement with the farmers the wage scale was fixed at 70 cents an hour with board, or from 10 to 20 cents higher than that of the preceding year. The result was shown by the fact that never before was the wheat belt so adequately supplied with labour as in 1920, and the farmers were enabled to get in their grain at less cost than in the previous season. The work of the Junior Employment Division was developed during the year. This consists of a system of vocational guidance for school children, and places employers in touch with possible recruits from the schools. Statistical records of the 33 states and municipalities co-operating with the bureau show that 22 per cent of persons placed in employment were women.

Children's Bureau.—In view of the excessive infant mortality rate in the United States, which is stated in the report to be one of the highest in the world, this Bureau conducted during the year an intensive study of infant mortality in a typical city, namely Baltimore. This investigation showed that about half the deaths of infants in their first year were due to circumstances of birth connected with poverty. As the result of past efforts by the Bureau 35 states have now established hygiene or child welfare divisions. For work in rural districts, the Bureau in

June, 1919, sent out a "Child-welfare Special", which is a compact child welfare station mounted on a motor truck, and fully equipped for making physical examinations of children. The car enters a State only at the request of the State Department of Health and only goes to those communities which promise local co-operation. So successful has this work proved that two additional cars have been provided for the current year. No prescriptions or treatments are given, but a written report of the child's condition is issued to the parents by the doctor. The Bureau is investigating the various existing systems of mothers' allowances, of children's courts, the condition of children born out of wedlock, and general child welfare legislation. In December, 1919, a permanent committee of the Bureau was appointed to formulate definite standards of normal development for the use of physicians in examining children for employment certificates, and tentative recommendations have already been sent to state labour and hygienic officials. A special study of the conditions of children in an anthracite coal mining area in Pennsylvania revealed the fact that, owing mostly to family need, a large proportion of children left school to go to work, one-third of the boys and one-fourth of the girls starting to earn before they were 14. A study of conditions in Rhode Island centres showed that 8 per cent of the children between 5 and 15 years of age were engaged in their homes in some form of work for factories either by hand or by machine, though the average annual contribution to the family purse from this source was only \$48. Many of these children worked not only after school hours, but also in the evening, and some worked exclusively at night. "Almost three-fourths of the working children of the United States aged 10 to 15 years inclusive, and more than one-eighth of our total child population of these ages, are labouring in gainful occupations entirely unregulated by State or Federal child-labour laws," the report states. Of these

the great majority are engaged in some form of farm labour.

Women's Bureau.—The Women's Bureau, originally formed for war service in 1918, was established on a permanent basis in June, 1920. The object of the Bureau, is "to formulate standards and policies which shall promote the welfare of wage-earning women, improve their working conditions, increase their efficiency, and advance their opportunities for profitable employment." The Bureau has already secured the abolition by the Civil Service Commission of discrimination against women in the Civil Service, whereby 60 per cent of the positions for which examinations are held were formerly reserved for males. Investigations have been carried out in many directions into the industrial employment of women, which since the war has been widely extended to include many industries from which they were previously debarred.

Division of Conciliation.—The growing usefulness of this Division is shown by the fact that whereas in the early days following its inception in 1913 strikes were already in effect in 70 per cent of the cases where intervention was asked, at the present time less than 30 per cent have at the time of such application reached the stage of a strike or lockout. The Department intervenes in a dispute only on the request of one of three parties, the employer, the employee, or the public directly affected, its duties being only conciliatory and diplomatic, and not judicial. During the fiscal year the Department assigned commissions of conciliation to 802 cases, or 1,200 cases including those handled through labour adjusters in the western copper fields, the oil fields of California and by the Federal Administrator in the packing-house industry. Of the 802 cases directly dealt with by the Department 596 disputes, affecting 616,000 workers directly and 685,000 indirectly, were adjusted and settled. In 96 disputes only was it impossible to arrive at a

settlement. These disputes included 413 strikes, 34 lockouts and 8 walk-outs.

Bureau of Immigration.—During the year under review 633,371 aliens arrived in United States ports, 98.1 per cent of this number being admitted. This was a large increase over the previous year, when the aliens arriving numbered only 237,021. On the other hand 428,062 aliens left the United States in the year 1919-20, compared with 216,231 in 1918-19. The percentage of rejections was the lowest since 1913; the ground of rejection in most cases was that the applicants were likely to become a public charge; on the illiteracy test, 1,639 applicants over 16 years of age were rejected. Deportations on departmental warrants numbered 2,762 during the year, 314 of this number being classed as "anarchists." Membership of the Communist Party of America was held to be a ground for deportation, as force or violence was advocated by this Party as a means of attaining its ends. The number of orientals admitted showed a considerable advance over the previous year.

Bureau of Naturalization.—Over half a million aliens applied for citizenship during the year. Of these 15,586 were rejected on various grounds, the number rejected because of lack of education being 1,231; the latter class is expected to disappear under the active efforts of the Citizenship Training Division of the Bureau. This division co-operates with the public schools in teaching the English language and the duties and responsibilities of citizenship. The popular movement for the so-called "Americanization" of aliens has led to the forming of many public school citizenship classes as well as to the individual instruction of prospective citizens in isolated districts.

Recommendations.—As the result of nearly eight years' experience in administering the Labour Department, Secretary Wilson lays the following re-

commendations before Congress: "Perfection of the United States Employment Service by an organic statute authorizing co-operation with states and territories, so that throughout our Republic no wage earners shall vainly hunt for profitable work while profitable work anywhere waits in vain for wage earners.

"Adjustment of the relation of wage-earners to the utilization of public lands and community credits, so that unlimited opportunities for co-operative self-employment shall sustain profitable wage earning work at a constant maximum.

"Legislation relative to adjustments of seasonal to non-seasonal work (including transportation facilities) whereby wage-earners may economically vary the monotony of life with temporary employment in the nature of outings.

"Authority and appropriations necessary to promote the training of wage-earners within their industries for the purpose of making their employment more profitable to themselves and their work more useful to their employers and the public.

"The maximum of national protection for children of underpaid wage-earners whose necessities drive them to put their offspring prematurely into industrial drudgery.

"Statutory perpetuation in the Department of Labour of the Division of Negro Economics.

"Further promotion of appropriate American education of applicants for citizenship and of citizens also, and prohibition (as to national elections) of voting by aliens.

"Adjustments in co-operation with other governments whereby intending

immigrants from countries across the seas may apply for admission to this country before breaking up their foreign homes, and upon such application may secure the same benefits of adjudication by immigration officials, certificates by public health officials, and appeals to the final authorities that are now available to them only upon arrival at our ports. A model method is in operation between the United States and Canada under which no immigrant from Canada need break up his Canadian home until his case has been decided in his favour by the final American authority.

"Authority whereby the Secretary of Labour may in immigration cases exercise discretion as to individual hardships.

"Statutory provisions for reference to the courts (Federal or State, or both) for judicial hearings and judgments in all cases of lawfully domiciled aliens whose rights of continued residence are at issue either on questions of fact or law, to the end that rights of domicile once acquired shall be determined by judicial instead of administrative process.

"Legislative consideration of the recommendations of the Industrial Conference called by the President, in its report of March, 1920.

"Immediate legislation providing higher pay for competent and industrious employees of the Department, its bureaus and divisions, who, in consequence of changes in the purchasing power of money are suffering from what is in effect an arbitrary reduction in their wages. One consequence of this injustice to employees is a tendency on their part to abandon Government service for private employment, which seriously prejudices the public interest."

APPRENTICESHIP IN THE UNITED STATES

THE Industrial Bureau of the Merchants' Association of New York recently conducted a survey of the American Apprentice System and the results of the inquiry were published in *Greater New York*, from which the information in the present article is derived.

In 1913, a survey was made of conditions in the printing trade, which showed that out of 1,064 shops replying to a questionnaire, 764 reported that no attention was given to apprentices. Of the remaining 300 shops only 42 reported any written or verbal agreement that provided for definite instruction and advancement. Instruction for the most part was carried on through journeymen or foremen. The decadence of apprenticeship training was also shown in an industrial education survey of conditions in machine shops of New York City undertaken in 1919. Information was obtained from about 5,000 machine shops in Greater New York and the report of the survey states: "Of definite training of apprentices there is little and what there is, is largely confined to large establishments. The survey revealed only four establishments having regular indentured apprentices. In eleven other establishments visited, employing 4,477 machinists and machinists' helpers, there were only 164 apprentices, or boys who were being more or less thoroughly trained in the trade."

This condition is attributed to the specialized occupation and greater freedom of employment characteristic of modern industry. Since apprentices today are not bound out as formerly, the employer often finds his trained help leaving before any return has been received for the cost of training. Specializ-

ed occupations, moreover, and large shops make practical training of an all round journeyman a difficult task.

Trade instruction is carried on in the United States by employers either in informal systems as in the printing trade or in well organized corporation schools, or in so called "vestibule schools." The informal systems of training are the most widespread, ranging from almost complete neglect of the apprentice to personal instruction by the foreman or the employer himself.

As an outgrowth of the growing demand for skilled workmen there have grown up in many large organizations elaborate systems of apprenticeship training. These "corporation schools" provide thorough training not only by practical but also by theoretical instruction. For the most part all work is carried on within the plant by instructors paid by the company; although in some cases the school work is carried on in public continuation or night schools.

Such corporation schools have been established by the Pennsylvania Railway Company; R. R. Donnelly and Sons, The Lakeside Press, Chicago; and the Packard Motor Company.

The apprenticeship system of the Pennsylvania Railroad was started in 1910 and in 1917 had grown to ten schools with several hundred apprentices. Equipment and instructors are furnished by the company, and all instruction is carried on on the company's premises. There are three classes of apprentices—regular apprentices, who are admitted upon examination and interview and whose period of apprenticeship is four years; first-class apprentices, chosen from regular apprentices showing exceptional ability after the first year, and specials, consisting of graduates of technical colleges and oc-

asionally first-class apprentices of extraordinary ability.

The courses of instruction for regular and first class apprentices in addition to the regular shop work consist of four hours per day during working hours and on company time for forty-two weeks each year during the first three years. Apprentices move by definite schedules from one shop to another. Written instruction and text book material are prepared by the instructors and supplied in mimeograph or blue-print form.

The results of the system have been better trained men, the creation of media for selective material, and a definite creation of a higher class of apprentices.

The apprentice system of the Lakeside Press, Chicago, was established in 1908, and just prior to the war it was taking on thirty new apprentices each year. Instruction is furnished by three full time teachers. To be eligible, boys are required to be about fourteen years old and to have a grammar school education. The first two years of the five-year apprenticeship period are arranged so that three and a half hours daily are spent in the school room and four and a half hours in the factory. Specialization in one of the departments follows later. In the school are taught mathematics, English, science, history, etc., in addition to a thorough course in design and type composition. For arithmetic, design and certain other subjects specially prepared texts are used.

The hours per day are the usual shop hours, and remuneration in the form of a weekly wage is increased each six month period. In addition to a special bonus of \$25 per year, if a rating of 95 per cent efficiency is attained, there are certain bonus increases added to the weekly pay for special efficiency. A weekly deposit of part of the earnings is required, the total sum to be paid over when the boy becomes a journeyman. Two weeks' vacation at full pay

is allowed if an efficiency standard of 95 per cent is attained.

The Packard Motor Company, which had sixty apprentices in 1914, requires boys seeking a position in its plant to be at least sixteen years old, to possess a certificate of graduation from the eighth grade and to pass a physical examination. Both the boy and his parents must agree that he will complete the course, and a deposit of \$25 is required. The length of the course is three years, during which time the usual apprentice wages are paid. At completion of the apprenticeship period, a \$100 bonus is given and two weeks paid vacation allowed. In addition to shop work, two hours of drawing and three hours of mechanics are taught each week by a technical school graduate. Experienced machinists, one to each six apprentices, devote their entire time to shop instruction, the boys being transferred to new work and a new instructor every six months. It is a rule that the boys must be actual producers. There is a second type composed of older men who undergo an intensive course of one hundred and twenty weeks, and still another school for foremen lasting three weeks.

The so called "vestibule schools" were an outgrowth of war conditions which demanded intensive instruction to enable inexperienced help to carry on a single process in quantity production. It is stated that the success of such intensive training, which extended over a period of only a few weeks has led to the serious consideration of adapting it to peace conditions. There has, however, been strong opposition to it on account of its tendency to break from all apprenticeship rules and to lead to "blind alley" employment.

Industrial training in various trades is also provided by continuation classes, part-time co-operative schools and by vocational and trade schools. Continuation classes are conducted either on the factory premises or in the public school and seek to reach boys in industry un-

able to attend school. In New York State attendance in these classes is compulsory for minors between fourteen and eighteen years of age not attending school regularly. The work is conducted either on the employees' or the employers' time, usually the latter. Part-time co-operative schools seek to give the boy in school some actual shop practice. Work, therefore, alternates between shop and school. This type of school has proven more successful in commercial than in industrial training, there being in New York City at the present time some 700 pupils in the

former and only 175 in the latter. The course of vocational and trade schools conducted both by day and night lasts two years and combines both theory and shop practice. A boy on graduation is simply an advanced apprentice and must qualify by more experience before becoming a journeyman. Opposition exists to trade schools on the ground that such training cannot be properly developed outside of the shop and for the further reason that it tends to dilute the skilled trades with a large number of inadequately trained journeymen.

APPLICATION OF THE LEITCH PLAN OF INDUSTRIAL RELATIONS

A RECENT issue of the *Monthly Labour Review* of the United States Department of Labour contains an account of a year's experience in the operation of the Leitch plan of industrial relations in a large clothing factory in the United States. This plan (which is described by Mr. Leitch in his book "Man to Man"*) consists in the organization of the personnel of a factory on the lines of the United States Government. The cabinet consists of the executive officers of the company, the senate is elected from among the under-executives, departmental heads and foremen, and the house of representatives is elected by secret ballot by the whole body of workers. It was found in practice that the plan had to be largely modified before it could operate successfully. The *Monthly Labour Review* points out that the Government of the United States was designed to promote deliberation and to prevent quick action, while industry on

the other hand must have prompt action and output, and asks the question "Can a form of government that 'balances' authority and promotes deliberation rather than action be appropriated for industry with its need of prompt settlement of disputed questions?"

The first modification of the plan was the appointment of a permanent wage rate committee by the house of representatives with full power to take up with the management directly complaints about wage and bonus payments and settle them. This step was taken with the object of obtaining more prompt settlements. Up to that time grievances had to be dealt with by the house, passed on to the senate and then to the cabinet, before a settlement could be effected, this procedure causing the machinery for adjusting grievances to be clogged up by the numerous cases. The committee at first attempted to settle each case individually, but found that new cases arose faster than they could be disposed of, and after a year's experience, the conclusion was reached that

*Published by B. C. Forbes and Co., New York.

the right way was to classify the individual cases, and then make regulations for each class.

When officers of the International Ladies' Garment Workers' Union endeavoured to unionize this factory, and later on declared a strike, the house of representatives took exception to this action, and expelled one of its members, who was in sympathy with the union. Later on the company discharged this unionist and another employee, and when it was charged by the union leaders before the War Labour Board with discrimination against trade unionists, a delegation from the house defended the dismissals on the ground of disloyalty to the existing organization in the shop. The delegation told the board that this was the kind of organization the great majority wanted, and that they had the same right to expect loyalty to their organization that the union had to expect it from union members. They further said that they wished to continue to settle their affairs directly with the company and protested against being brought under the award of the board, which a victory for the trade union would have meant. Owing to these representations the company was not brought under the award. As a result of this affair the house concluded that since such controversies involved the house as well as the firm, the company should not take future actions of this kind without first getting the approval of the house. It also concluded that the handling of grievances should be speeded up. The house therefore submitted two proposals, one providing for joint action in discharging employees and the other providing that all grievances respecting wages, hours and bonuses be handled by the wage rate committee without previous reference to the employment department. Both proposals were concurred in by the senate and cabinet. Soon afterwards a resolution was adopted by the house that company representatives be permitted to be present at sessions of the

house only upon invitation of the chairman and that they be required to retire immediately after their remarks.

In November, 1918, on the recommendation of a committee of the house, appointed for the purpose, a revised constitution was adopted which provided a house of representatives to deal directly with the management, and abolished the senate. As at present constituted the management has a planning board of six members which meets twice a week and keeps in close touch with the house committees. By such consultation and co-operation it is possible for the house to know the management's position on proposals that are submitted to it by the committees.

The development of this form of shop organization is summed up by the *Monthly Labour Review* as follows:

Throughout the whole process of changes that have been passed in review there has been a progressively increasing participation by the employees in the making of policies and decisions that vitally concern them. The establishment of a wage rate committee marked the triumph of collective bargaining over the earlier policy of a collective economy dividend. With the passing of the senate, the house of representatives completed its evolution from a house of suggestion to a house of legislation. To-day the president of the house is a member of the planning board. In noting this gradual increase in the power and responsibilities of the employees, it should be remarked that the management has welcomed and encouraged this development.

The growing power of the employees is revealed again in the matter of discharges. When the case before the War Labour Board was pending the company agreed with the house not to discharge employees thereafter without first consulting the latter. Since then the management and house have adopted a set of rules prescribing the offenses that justify discharges. Now when the company wishes to discharge an employee it must go before the betterment committee (a standing committee of the house) and prove that the employee is guilty of one of these offenses. This committee is the jury in the case and decides the facts. The company must drop the action for discharge if the committee decides that the case has not been proved. But if the company wins, the employee may

appeal to the board of review, upon which the house and management have equal voting power.... The changes that have augmented the power of the employees have been, at the same time, in the direction of direct and continuous contact of management and people. The legislative policy is still adhered to, but joint conferences precede legislative action. Legislative action becomes more a matter of ratification under this arrangement, although

the house has the right to proceed independently.

This method of shop direction is proving a great school of experience for the employees, and for the management also. There is no denying the fact that this organization has to its credit a record of substantial achievement and that it is entitled to distinction among those who are introducing popular government in industry.

WORKMEN'S CONTROL OF INDUSTRY IN ITALY

Government's Draft Bill and Amendments by High Council of Labour

An outline was given in the LABOUR GAZETTE for November, 1920, of events connected with the labour dispute which began last June in the metal working industries of Italy, and which resulted in the occupation of shops by the workmen in September. On September 15, at the request of Premier Giolitti, the Strike Committee of the General Confederation of Labour and representatives of the General Confederation of Industry met in conference, and as the result of this meeting the Premier decided to appoint a Commission, composed of representatives of both these organizations, to draft a bill giving the workers a partial control over industry. A draft bill was accordingly prepared and in January was submitted by the government to the Council of Industry (the employers' organization) and to the High Council of Labour, an organization composed equally of employers and employed. The bill as drafted is outlined as follows by the Rome correspondent of the *Economist* (London):

"For every class of industry, excepting state-owned enterprises, new enterprises for the first four years, and enterprises with less than 60 men em-

ployed, there is created a workmen's control. The control has for its aim: (1) To make the men acquainted with industrial conditions; (2) to better the technical education and the moral and economic conditions of the men; (3) to ensure the execution of social laws; (4) to improve the methods of production and to make production more economical; (5) to attain social peace between employers and employed.

"The means suggested of obtaining these ends are the creation of a central control committee of nine members, of which six are to be elected, by national proportional representation, by the workmen, and three by overseers, clerks, and technical staff employed in a given class of industrial enterprises. There will be many control committees, but only one for each class of industrial enterprises. Presumably all committees will sit in Rome. Each committee will delegate its control functions to two or more workmen in each workshop. These local delegates will have the right to require employers to make known to them: (1) The methods of buying and the price of raw materials of industry; (2) the costs of production; (3) adminis-

trative methods; (4) production methods excepting only industrial secrets; (5) workmen's wages; (6) the subscribed and paid-up capital of the firm or company; (7) industrial profits; (8) the manner in which social laws and by-laws are carried out, and details as to methods of recruiting and dismissing workmen.

"When the Central Control Committee debate upon the reports of their local delegates, two delegates of the employers and one delegate of the High Council of Labour have the right to attend but not to vote. The employers will have the right to elect a committee of nine members, to which the Control Committee will make proposals for enforcing regulations deemed necessary to ensure the achievement of the aims described above. When necessary, a joint meeting of Control Committee and Employers' Committee will be convened, under the presidency of a delegate of the High Council of Labour."

The employers' organization, to which the draft of the proposed measure was submitted, objected particularly to sections numbered (2), (3) and (4), of the catalogue of information which local delegates would have the right to demand. These sections appeared to give to workmen the right to investigate the most secret affairs of the firm. Employers objected that much valuable information might thus become known to competitors.

AMENDMENTS BY HIGH COUNCIL OF LABOUR

The High Council of Labour, which is the official adviser of the government and Parliament in matters of social legislation, amended the government's draft proposals in many respects.

"The control committee," writes the *Economist's* correspondent, "are to be instituted in the first instance only in the steel and iron, textiles, chemicals,

electrical industry, land transportation, navigation and mines. Other industries may be successively subjected to control by royal decree upon the advice of the High Council of Labour. The central control committees will be elected, not by all workmen and employed, but by the workshops' committees which exist already and have duties relating to labour, hours, wages and other differences arising between employers and employed. The Central Committee will then delegate in each workshop two or more men upon a list of six members presented by workshops' committees. These local delegates will not have the right to know all the things enumerated in the government draft, but only to require, from time to time, those data which the Central Committee may desire to know, or administrative and technical methods, total production in the country, costs of production, capital employed, profits obtained and execution of social laws. The delegates will make the requests for the data, and the employers must give them. The data to be given will relate, in the main, only to past years, and must be treated as confidential. The Central Committee will make yearly reports on trade and industrial conditions, on the workmen's status, on raw material statistics, and make proposals for bettering industry and workmen's conditions.

"The employers will elect an industrial council of nine members which will give advice on the proposals of the Control Committee. A joint council, composed of the nine members of the Control Committee, the nine members of the Industrial Council, and five umpires nominated by the High Council of Labour, the Central Co-operative Committee, and the Union of Chambers of Commerce, will take resolutions on the advice of the two parties."

STANDARDIZATION OF DOMESTIC SERVICE

Report of Committee of Canadian Council of Immigration of Women for Household Science

DURING September, 1919, by invitation of the Minister of Immigration and Colonization, a conference was held in Ottawa, of representatives of the several provinces and various national organizations directly interested in or reflecting women's activities, for the purpose of discussing the subject of emigration of women from Great Britain to Canada. Following the conference, there was created, with the approval of the Minister of Immigration, the Canadian Council of Immigration of Women for Household Service, comprising representatives appointed by the several provincial governments (except Prince Edward Island) and of the following organizations: National Council of Women; Social Service Council; Y.M.C.A.; Women's Missionary Society of the Methodist Church of Canada; W.C.T.U.; Catholic Women's League of Canada; Women's Missionary Society of the Presbyterian Church of Canada; Interprovincial Farm Women; Federated Women's Institutes; I.O.D.E.; National Committee on Mental Hygiene; Women's Auxiliary to the Missionary Society of the Church of England in Canada; G.W.V.A.; and the Trades and Labour Congress. The present officers of the organization are: President, Mrs. Wm. Dennis, Halifax, N.S.; Eastern Vice-President, Mrs. H. D. Warren, Toronto; Western Vice-President, Mrs. MacNaughton, Harris, Sask.; Western Councillors, Mrs. Ralph Smith, M.L.A. Vancouver, Mrs. Dredge Jones, Regina; Eastern Councillors: Lady Pope, Ottawa, Mrs. Lawrence, St. John, N.B.; Secretary-Treasurer, Mrs. Robert Kneil, Alberta.

The primary objects of the organization are as follows:

(a) Undertaking the supervision of existing hostels for the reception and care of immigrant women for household service.

(b) Arranging for the establishment, control and supervision of new hostels as need arises.

(c) The control and administration of such Federal or other financial aid as may be granted.

(d) Studying the questions of immigration of women for household service, and making to the Department of Immigration and Colonization from time to time such recommendations as may be deemed advisable in the general interests of Canada and of the immigrant.

Women's Hostels

Previous to the formation of the Council there were hostels for immigrant women, under the direction of local boards, at several western and eastern points, but at the end of September, 1920, through the co-operation of provincial governments and these local boards of women, eight hostels, had been established at Halifax, St. John, Montreal, Regina, Calgary and Vancouver respectively. Thus there is a hostel in each of the provinces with the exception of Prince Edward Island.

To women coming into the country for household service, twenty-four hours free accommodation is given in the hotel in the province to which they are bound; but any newcomer travelling alone may, for a nominal sum, avail herself of hostel privileges. Working through the Employment Service of Canada the superintendents of hostels endeavour to

place the incoming women in homes as domestic helpers or at other work for which they are best adapted and where they will have opportunity to develop along lines of useful endeavour. From December 1, 1919, to September 30, 1920, the hostels received 4,475 women, of which number 1,089 were placed in homes and institutions where, it is reported, they have, in the main, given satisfaction. The work of getting the immigrants to the hostels is part of the federal immigration machinery, the women officers of the immigration staff overseas and on this side, in their care for the women immigrants, work directly under the Department of Immigration. The work of the Council begins with the arrival of immigrants at the

hostels, and aims to make these hostels home-centres for the incoming woman, not only until she finds employment, but at all times a place of rest between change of position, when out of work, home-sick, or in need of advice or recreation.

An important function of the Council, carried out through the hostel superintendents and the various affiliated organizations is what is termed "follow-up work". This work is not meant to interfere with the personal liberty and independence of the new-comers, but to safeguard the best interests of the women, to provide them with a channel through which they may seek redress for grievances and apply for help, at all times, in any difficulty.

Report of Committee on Standardization of Domestic Service

In January, 1920, the Canadian Council of Immigration of Women for Household Service gave considerable attention to the question of standardization of domestic service. It was realized that the interest of the women of Canada should be aroused to help to place houseworkers on a higher and more business-like basis. A committee was accordingly appointed as follows: Lady Pope, Ottawa, chairman; Dr. Ellen Douglas, Winnipeg; Mrs. McNaughton, Harris, Sask.; Lady Falconer, Toronto; and the Secretary, Mrs. R. Kneil, of Alberta. This committee was instructed to obtain information as to the attitude of different countries towards household work and workers, and to collect authoritative statements from different sources, as to any official action contemplated or already taken on the matter in this and other countries, with a view to preparing a practical scheme wherein the occupation of the household worker will be standardized as to hours, work, and efficiency, and in which the interests of both employer and employee will be considered. The committee accordingly sent out a questionnaire-letter to competent authorities in various countries,

asking information particularly on the following points:

Is there in your country any movement towards the standardization of housework as to hours, work, and efficiency, and in which the interest of both employer and employed is considered?

Have you training schools for houseworkers?

What is the average wage for a cook, housemaid, nurse-maid, general maid, when only one helper is kept in the house?

Are there any houseworkers' unions or housewives' leagues?

The more important of the many replies received are summarized below.

Canada

CALGARY,—Miss G. S. Manning, President of the Calgary Housekeepers' Association stated in reply to the questionnaire that the object of their Association was precisely that mentioned in the first question, to formulate a scheme wherein the occupation of the household worker will be standardized as to

hours, work and efficiency, and in which the interests of both the employer and employee will be considered. They had been aiming at this object for the last five years with varying success. The movement began about five years ago when a number of young women mostly household workers used to meet weekly at a Bible class at the Y.W.C.A. Conversations used to take place after the class was over, which, invariably turned to their work. Each party had a grievance and there was no standard set for anything, but there was general dissatisfaction. Miss Glass, at that time the secretary of the Y.W.C.A., conceived the idea of forming an organization, and after the proposal had been made to the class, a Labour M.P.P., for Calgary helped in the organization of the Association and the drafting of the Constitution.

"We have had some success," Miss Manning stated, "but as you know this class of labour, being female, is a very hard one to organize; so many things have to be taken into consideration. The members are migratory and nearly always marriageable, and in both instances, the association suffers, because if a girl goes away or gets married, the Association knows her no more.

"I am not aware of any other institution like ours yet in existence although we have had letters from all over the world asking for copies of the Constitution and information as to the movement.

"We could do a lot more good and make considerable more headway if we were not so terribly handicapped for capital, but the small fees collectable in an association of this kind are not sufficient to keep the movement in good health. What is really required is a nation-wide organization backed by a reasonable amount of money to see it fairly on its feet. If it were not for the expense many more girls would join the movement, and its scope for usefulness would be very materially extended."

The rules of the Calgary Housekeepers' Association provide for a minimum wage of \$15 per month, but members may obtain permission from the Arbitration Committee to accept less than this amount. Ten hours will constitute a day's work, with six hours on Sundays and holidays, and extra time is to be paid for at the rate of 25 cents an hour. The association provides for a course in Household Science, and a certificate is given to those members who complete the course.

MACDONALD COLLEGE, STE. ANNE DE BELLEVUE, QUE.—Miss Hill, head of the School of Household Science of Macdonald College, in her reply discussed the question how to make household service a standardized employment, and described the system of training at the school of which she is head, as follows:

I. What would you term standardization of housework?

The question is very broad, and I am answering it rather more from the following angle: How might we make household service a standardization employment?

1. Have definite understanding between employer and employee before work begins as to—

(1) What work employer expects.

(2) What work employee can do.

2. Definite understanding as to hours of work. Overtime work is paid extra.

3. Definite understanding as to free time and holidays.

4. Definite understanding as to schedule of wages (if schedule is possible) and conditions which will lead to their increase.

5. Organization of household and systematic management of house.

(1) Schedules.

(2) Adequate tools (number and condition). Not necessarily expensive.

(3) Proper placing and arranging of equipment to render efficient service and make an efficient worker.

II. Unfortunately there are not many movements yet towards standardization of housework, but they are increasing. The trouble is that women (employers) often have very little idea of division of labour; the standard they ought to have, considering the amount of work they wish done. Furthermore, they do not take into consideration that conditions, furnishings of a home, etc., make a difference in the amount of work which can be put

through, and as a result, the standard which must be set to meet the condition.

III. I think my suggestions are given in question one. I might say that I know from personal experience that a definite outline of work; definite hours; proper equipment mean more than half the battle. The poorer the worker the more supervision, of course, but both the employer and employee have something definite to go by. In our practice house in this School, I have four students at a time. The work is divided among the four. They do the buying, cooking and serving of meals which we have together—our household numbering five and often six. They also give the house its daily care. While they are carrying on this term of work they attend lectures as usual, and this can only be accomplished because each one knows what she has to do, when she has to do it, and where she does it. I supervise it myself, and needless to say, I could not do it unless each student did know what she was expected to do, as I have not time to supervise under any other condition.

TORONTO.—Mrs. Newton McTavish, President of the Home and School Council, says:

“A committee appointed by the Home and School Council made the following report:

The main objections to the present system of household employment from the maid's point of view are:

(a) Lack of companionship. (b) Lack of place to receive callers. (c) Neither fixed hours of work, nor fixed wages. (d) No standard of efficiency allowing an untrained girl to get as much as one trained. (e) Lack of system in the house. (f) The use of Christian name.

From the mistress' side comes the complaint that there is no training school whereby a maid can show her efficiency. Employers also feel that the general maid should receive the highest wage. Your committee feel there is great need of supplying housework.

The profession of houseworker should be dignified by having a training school to establish a standard of efficiency, and employers must learn to show by their schedule of wages, etc., that they appreciate the help of a trained worker. Employers must also come up to certain requirements as to wages, hours, comfortable room, place to receive callers, time to prepare maid's own meals, etc., and be ready to guarantee her time off (absolutely undisturbed if not out of the house). It is felt there is much to learn, many improvements to make, on both sides—but with a better understanding of one another's aims, and a more dignified position for housework, there should be a great improvement in present conditions.

Great Britain

Miss D. Jewson, of London, England, described the organization of the Domestic Workers' Employment Bureau, of which she is secretary, as follows:

In September of last year, following upon the return to pre-war service of numbers of women withdrawn into munition work, etc., during the War, a Domestic Workers' Employment Bureau was established in connection with the National Federation of Women Workers, for the purpose of protecting the interests of domestic workers against any tendency to revert to pre-war conditions of service. This bureau drew up a programme of conditions for domestic servants to which every employer engaging a servant through the agency of the Employment Bureau must conform.

We are trying to get training schools started for house workers, and we also have a scheme for establishing a large domestic workers' hostel in the centre of London for the purpose of: (1) Supplying daily workers to private people and hotels; (2) as a resident hostel for domestic workers who wish to change their situation and need somewhere to go in the interval; (3) as a training centre for training the women engaged from the hostel, and to help raise the status of the workers by making them more efficient in their work; (4) to provide a club and employment bureau. It is hoped that such hostels will be opened in other parts. We find that many women are strongly opposed to the living-in system, who would readily take up domestic work if they could be free after a fair number of hours' work daily, and these hostels are desired to make this practicable.

PROGRAMME OF THE DOMESTIC WORKERS' EMPLOYMENT BUREAU.

1. A minimum for resident domestic workers of 12/6 per week, or £2. 10s. a month (£30 a year), rising according to experience.
2. Set meal hours; half-hour breakfast, one hour dinner, half-hour tea.
3. Decent sleeping accommodation, and allowance for laundry.
4. Two hours free time each day, and half-day a week.
5. Twelve hours a day, including time off.
6. Employer to supply uniform if required, and to pay cost of the washing.
7. Fourteen days' holiday each year, with full board and wages.
8. Notice—A month's notice on either side if paid by the month; a week's notice on either side if paid by the week.

Australia

Miss Constance Stephens, of Sydney, Australia, wrote as follows:

Everywhere in the world there seems to be at present a movement on foot to alleviate in some measure the strain of the domestic problem. We, in Australia, have the same problems as elsewhere, and the same two or three small bodies who are endeavouring to better conditions. But so far, none of the schemes have come to any practical end. Not perhaps dealing so much with the domestic question pure and simple, but still in more ways than one, helping the struggling housekeeper in these days of high prices, the Housewives' Association, with branches established in every capital city of Australia, and suburban branches in each of those capital cities, seems to be doing the best work to date.

As far as the domestic problem proper is concerned, some time ago, during the visit of the British Overseas Delegation, an association was formed in Sydney, primarily for the purpose of securing information for the visitors. Many meetings were held, but little information of any value was secured. There was little or no co-operation between mistress and maid in the Association, and the meetings finally devolved into meetings of a few employers with no power to enforce any regulations they might make. Further than that, a ruling was made that junior helpers should start at the age of 15 with a weekly wage of 10s. to be gradually increased till at 21 years the wage was 20s.

A short time ago a number of British war workers came to Australia under contract to serve 12 months in domestic service, and these girls were absorbed almost immediately. But so far as I have been able to find out, nothing has been heard of them since. In any case, the couple of hundred girls would not be a drop in the ocean of help required to settle the domestic difficulties of all housekeepers.

New Zealand

Mr. F. W. Rowley, Secretary of the Department of Labour, New Zealand, replied as follows:

Although most trades, industries, or occupations in this country are regulated as to hours, wages, and general conditions of employment by various "awards" or "agreements"—under the Industrial Conciliation and Arbitration Act—the calling of domestic workers is not so provided for. There is no registered union of either female domestic workers, or employers of domestic labour, i.e., so far as it relates to private households. The provisions of the Act referred to are, however, availed of by unions of cooks, house-

maids, etc., working in "licensed" and "private" hotels, boarding houses, restaurants and institutions. The scarcity of private domestic workers has been, and is, in New Zealand, so great and the demand for their services so insistent, that no difficulty is experienced by qualified girls and women in obtaining employment at remunerative wages with good conditions as regards hours, holidays and accommodation without having recourse to organized union demands.

Appended hereto, you will find a tabular statement setting forth, with explanatory notes, particulars as to the wages, etc., of female domestics employed in private houses.

Average Weekly Wages of Singly Employed
Female Domestic Workers in Private
Houses.

Cook, 35s.
Housemaid, 20s to 25s.
Nursemaid, (adult), 25s. to 30s.
General maid, 25s. to 30s.

So far as to your query, "is there any movement toward standardization of housework" is concerned, it might be answered thus: There are in all of the cities and larger towns various private organizations of women, variously styled "women's welfare leagues," "national council of women," etc., which have among their objects the handling of the domestic servant problem. These, however, are more generally concerned with the moral and hygienic environment of girls who earn their living in industrial as well as domestic duties. In this connection, I am posting you some extracts from the press relative to the "Household Orderlies' Association", a recently established organization whose aims and objects are set forth in the newspaper reports referred to.

So far as training schools are concerned, our system of education in New Zealand provides for instruction of the more senior girls in hygiene, cookery, (needlework of course) by attendance at classes of about two hours a week. Senior girls also attend the technical schools, (i.e., vocational training) for more advanced and frequent instruction.

The Department of Labour has a number of Women's Employment Bureaux, the women in charge of which, in addition to acting as employment officers act in an advisory capacity to women seeking, or in employment, and much sympathetic help and advice is dispensed by the several officers in the different towns. As no fees are charged either to the mistress or to the domestic worker, there is no motive or gain underlying the activities of these officers. They protect the girls from going to unscrupulous or unsuitable employers, and will not recommend to employers girls who by known lack of qualifications or good character, it would be undesirable to have employed in a private family.

HOUSEHOLD ORDERLIES' ASSOCIATION.

Applications for training as household orderlies will be received from women under the age of 28. Applicants must apply in their own handwriting, stating age, previous schooling and experience, state of health, height and weight. They must also name two references who may be communicated with for a testimonial of character.

They will enter the hostel as probationers, and will have practical training in house, kitchen, laundry, and if possible, nursery work.

On satisfying the staff that they are competent, employment will be found for them, such employment to be household work in any of the above branches, remunerated at a fair rate (average 1s. an hour), and not to be such as to entail constant hard scrubbing or constant heavy washing, but some work in these branches will be expected.

Work hours will be arranged by agreement between employer and association. Work over the statutory 48 hours a week will be paid as overtime.

Household orderlies will be required to keep a time sheet and record of payments as will the employer, and both must be ready to show them on demand to the hostel authorities. A definite contract will be entered into with the employer as to time and method of payment.

It is calculated that an orderly will earn 45s. a week without overtime, so that £1 a week profit will be assured; but overtime work will be obtainable at 1s. 6d. an hour, so the income can be increased if desired.

On entering the hostel a deposit of £4 must be made. If the probationer passes the efficiency tests, this £4 will go towards defraying hostel fees for the next month after qualifications; if the probationer does not qualify, this deposit shall be held by the association in lieu of board and lodging.

From the time she is qualified, the household orderly shall pay 25s. a week board and lodging in monthly payments in advance.

On qualifying, the household orderly must sign a contract to live in the hostel and work with the Association for a minimum of six months. After that time she may leave the hostel and take the status of associate household orderly. To retain their privileges, associates must be members of the H. O. Club and subscribe to its rules. One of these rules will be that employers must be members of the Employers' Guild.

The object of the scheme is to make fair working conditions for domestic workers and their employers, together with a congenial community life for workers. The household orderly is expected to give willing service of a high standard, and in every way to raise the present status of household work. The household orderly will be on the same

footing as any other independent worker, as e.g., a visiting governess; and the same sense of honour will be expected as is expected from the office clerk, e.g., the household orderly must not talk about her employer's affairs or make public comment on the conduct of the household. She must be punctual in her hours, and keep absolutely to her work.

In any dispute between employer and employee, the Council will be the arbitrator, and every effort will be made to put the household orderlies in positions where they will be happy. The general conditions of the community life of the hostel will be the same as those obtaining in any modern hostel for women.

United States

BOSTON, MASS.—Miss Broad, General Secretary of the Boston National Y.W.C.A., stated that some five years ago the Boston Association closed the rapidly declining school for domestic servants which they had conducted for some 25 years. It was closed owing to the condition of the times and the fact that a sufficient number of qualified girls could not be secured to warrant the expense of conducting this school.

Miss Blood, Director, School of Household Economics, Simmons College, Boston, reported that the National Civic Federation had been attempting to establish household service on an hourly basis.

CHICAGO, ILL.—Miss Haney, organizer of the Women's Trade Union League of Chicago, reported that a household workers' union had been organized at Chicago last autumn, but as the members were scattered over the city it was difficult to get large numbers to attend the meetings and to bring before them the benefits of organization. However, the Union was growing slowly.

NEW YORK, N.Y.—Miss E. Beatrice Stearns, of the Household Employment Industrial Committee, Y.W.C.A., wrote as follows:

Steps have been taken in this country toward the standardization of housework, but nothing very definite has as yet been accomplished. You will probably appreciate that this is a very difficult and slow process. First, because employers are loathe to adjust themselves to the conditions necessary to make standardization workable; and second, because employees are difficult to get under any conditions. I

think the latter is accounted for largely by the present shortage of women workers in all industries, and also by the fact that women are unwilling to work at housework. The opportunities for social contacts that are offered in other businesses, make them more attractive, and the social stigma which still exists in the minds of most people who consider housework, is still a great handicap. I am of the opinion that it is largely a matter of education of both employer and employee and that we do have to face the fact of the shrinking supply of houseworkers and must therefore consider supplementary ways and means of performing household tasks such as, for instance, co-operative community kitchens, bakeries, laundries, etc.

There are a number of cities in the east which are attempting to solve this problem. They are securing workers largely from the married women group; women who have families of their own and are able to give a few hours each day to this work. These experiments are in the main successful. Of course the workers are untrained, having had experience usually only in their own homes, or, in a few instances, having before their marriage been employed as domestic workers.

Denmark

Mr. S. Neumann, of the Department of Labour and Social Insurance, Copenhagen, stated that the Trade Union of Maid Servants had tried to obtain greater uniformity regarding working hours by establishing a system of contracts providing for special payments for work done after regular hours, but hitherto, there had not been any remarkable results. The Housewives' Corporation, which extends over the whole country of Denmark, with regard to this employment, remark that their experiences were that there is less uniformity in household service than in any other work, and the Trade Union of Maid Servants cannot accomplish its purpose unless work is specialized in each household, regarding the nature of the work as well as the hours.

There are professional schools in Denmark for the maid servant, founded by private enterprise, but some of them are subsidized by the Government. The best known among these schools is the "Professional School of Maid Servants", founded and directed by a trade union of the maid servants.

In accordance with information received from "The Housewives' Corporation" the salary is at present, in Copenhagen, free living excluded:

Cooks, 75 Kr. a month.

Housemaids, 55-60 Kr. a month.

Nursemaids, 50 Kr. a month.

Maids-of-all-work, 60-80 Kr. a month.

Owing to the increase of servants in Denmark being limited, The Housewives' Corporation has begun a movement "to induce young ladies to act as maid servants, and they have to some extent responded to this appeal."

France

Madame Letellier, Labour Inspector, Paris, France, stated that there had been in Paris, a trade union called "Gens de Maison", comprising all categories of servants, but this union had ceased to exist a few years before the war. At the present time she did not know of any association grouping servants. They had schools for householders and household duties were taught in all girls' schools, especially in professional schools. They had no regular schools for servants such as those found in Switzerland and other countries, though, there were in Paris numerous courses in culinary training.

Salaries for servants were very high since the war. Cooks of medium class households earn from 120 to 150 francs per month. Chambermaids from 100 to 120 francs, and more if they can sew well. General servants were paid 1.25 and 1.75 francs per hour.

Sweden

Dr. E. Gunnar Huss, Bureau Chief of the Government Labour Board, Stockholm, Sweden, gave the following information:

The household servants' work as to hours and efficiency has not yet been regulated either by the state or by private agreement between household workers and their employers. On the other hand, servants nowadays are insured against accident, invalidity and old age. The premiums for accident insurance are to be paid by the employers.

In the City of Stockholm as well as in many towns, there are houseworkers' unions working in the interest of the house servants. These unions desire to carry through the eight-hour scheme, but limit themselves at present to the following programme:—

1. Household work to be done between 7 o'clock a.m. and 7 o'clock p.m.

2. Sundays free after 5 o'clock p.m.

3. Extra pay for work at overtime.

4. Fourteen days holiday yearly with full wages and payment for boarding.

5. Municipal labour offices, with exclusion of private ones.

6. Abolition of the old laws regulating the relations between household servants and employers.

7. Full and effective training for the household servants in the different kinds of domestic work.

8. Household servants not to be spoken to by their Christian names, but by "Miss" (Froken).

Since June, 1919, there has been in operation a Housewives' Alliance with seat in Stockholm including about 50 branches all over the country and working for the good of the homes. The Alliance encourages home industry and practical and work-saving home arrangements. It has also started a co-operative movement for the purchase and sale of industrial and agricultural products, import of articles, etc., but has preferred not to interfere with the claims of the Household Workers' Union.

The alliance, which is neutral in political and religious matters, comprises housewives of all shades of society, employers as well as employed, and that explains why it avoids taking any stand with regard to the said claims.

There are a great number of schools for training of household workers; housewifery schools, (hushallsskolor) and apprentice schools. The former schools and also some of the latter are subventioned by the state and are subjected to certain regulations as to plan of teaching, qualifications of teachers, etc. The new School Law of 1918, regarding continuation and vocational schools, takes up household work as a vocation on the same line as other technical professions. Any community has therefore the right to enforce training in household work for every girl who works in such work, either for her living or in her own home.

It is nowadays very difficult to get good servants, whether trained or not trained, as young women prefer an occupation permitting a greater personal independence.

As to wages, there exists an official investigation with regard to the years 1914 and 1919. The average monthly wages were at these dates. In Stockholm and in the whole country, as follows:

	Stockholm		The whole country	
	1914	1919	1914	1919
	Kr.	Kr.	Kr.	Kr.
Housekeepers	23	75	23	53
Housemaids	18	45	16	36
Servants performing				
alone all work ...	19	50	16	38
Cooks	25	60	18	38
Kitchen maids	15	35	18	38

The value of board and lodging was, in 1914, estimated at 33 Kr., in Stockholm, and 31 Kr., in the whole country, and in 1919, at 88 Kr. in Stockholm and 82 Kr. in the whole country.

The information received for 1919, concerning wages and value of board and lodging might, upon the whole, still be valid.

The exchange of domestic labour is now for the greatest part concentrated in the public labour exchanges of Sweden (Sveriges offentliga arbetsformedling), which are spread over the whole country, and form a systematically working organization. The different offices are managed by local bodies, but are supported and supervised by the State.

Switzerland

In reply to a letter addressed to the Servants' Employment Office, Zurich, Switzerland, the following information was received from Mr. L. Eberhard:

There are in all large towns of Switzerland, strong Catholic societies of domestic servants, which come under the direction of the Catholic clergy, forming a Swiss Union, having their own office and official organ of the Union under the title "Home and Foreign Countries". They form a strong organization; their members have tri-monthly meetings, annual festivals, and several courses of study offer them many sources of encouragement.

The organization of the non-Catholic dates only from last year, when the Zurich Neutral Society of Servants was founded. I am not aware of others having similar societies in other cities; but here and there, exist free Sunday meetings frequented more for distraction and mutual edification. (A socialistic society was formed last year but I have not been able to learn anything of its workings.)

Since last year, a movement has been on foot in Switzerland to give legal status to conditions under which domestic servants will be employed. This movement following conferences between societies of ladies and those of domestic servants, which took place at Zurich led to the establishment of "The Directions", the principal points of which, have been likewise adopted at Winterthur, Bâle, St. Gall and at Berne. Its decisions,

however, have not yet a legal status. However, the societies of ladies and of domestics are about elaborating a contract of normal work, which will be made obligatory by the authorities, but the negotiations to this effect have not yet materialized.

The Society of Domestic Servants, holds monthly meetings at which lectures are given, and courses of sewing and culinary art, and in the winter they meet every Sunday for the exercises of Choir practice. The Ladies' Society of General Utility place at the disposition of the servants, on Sunday, beautiful halls where lectures, etc., are given such as the Olive Sunday Home (Sonntagsheim de l'Olivier). The Martha Society does likewise, in the Martha district.

It has also been decided to establish a dwelling house for servants and a home for old servants. But financial difficulties will no doubt delay a long time the realization of this plan. The housewives' society, called in Zurich the Commission of Service, is made up from representatives of different ladies' societies, which aim to promote utility interests to a larger extent. In other cities, the necessary negotiations with servants were taken in hand by existing societies of ladies, or by special committees.

There are not in Switzerland, to my knowledge, associations of housewives whose special aim is economy by means of common stock purchases of food-stuffs, etc. The want has not been felt, thanks to the existence of a great number of associations of consumers which elect women as members of their board.

The "Directions" referred to above are as follows:

After granting fewer hours of work, and raising the salaries of all categories of professions, it is necessary that the condition of persons in domestic service also be readjusted on lines of progress. By reason of multiplicity of domestic concerns, and the impossibility of foreseeing daily events, and of the diversity of servants' aptitudes, it is much more difficult to conform working hours of domestic servants to the rules laid down for other professions. In cases where the prevailing customs of the house have been satisfactory to both parties, the status quo should continue. Wherever changes are desirable, in disputed cases or new places, the following principles should be kept in view. On carrying them out, consideration should be given to the household necessities and the wants of the servants.

1. Working hours—Daily work, taking in mealtime, comprises an average of 13 hours. The distribution of free time is left in each household to personal understanding. Work should finish as soon as possible, and after 7 o'clock at night cursory tasks only should be given. As it is impossible to give free

time on the days of general cleaning up, washing and ironing days, each week there should be given four hours of leisure with permission to go out. When on account of extra work it is impossible to allow of free time compensation should be made (for instance one Sunday or a Sunday afternoon) or else extra remuneration. Instead of daily leisure time, a convenient hour could be given to permit the servant attending night school. The variation in the hours of day labour should be made by mutual consent.

2. The work on Sunday should be as limited as possible. Every second Sunday, time should be allowed for religious observances. (To Catholic servants one Sunday, the low mass, 6 or 7 o'clock and the following Sunday, the mass with sermon.) Every Sunday afternoon should be free, the hours of leisure on week days can be limited in proportion.

3. Work done after 9 o'clock at night for the pleasure of the employer should be recompensed by free time or paid 1 Fr. an hour.

4. Vacations—After one year's service, the servant has the right to 15 days' vacation with salary and the equivalent of her board in the ordinary fare of the country (at the present time 3 Fr. a day in Zurich). These holidays are really given to rest. When there is no cause whatever of complaint it is not permitted to dismiss the young girl before Christmas, nor before the vacations. On the other hand, the servant will not be permitted to cancel her contract, after New Year's nor after the vacations.

5. Bedroom—The young girl should have a room that is sanitary, that she can close, having an outside window to let in fresh air also a good bed for her own exclusive use. If the room cannot be heated, the servant must have the use of some heated apartment to spend her free time.

6. Insurance—The servant has the right to have herself insured against illness, at the expense of her employer.

7. Salary—The minimum wage for young girls just out of school, from 14 to 16, is 15 Fr., for older girls without trade, (unskilled) from 25 to 30 Fr. 50 Fr. for those who can keep house themselves, and cook homely fare. To resident servants, the salary is regulated according to the aptitudes of the maid, and the requirements of the house. It is not allowable to keep servants without pay, even under the pretext of "voluntary" service.

To advise in the affairs of domestic servants, the post of "Servants' Secretary" has been established, which is subordinate to a Commission of household service, composed of representatives from the societies of the housewives and servants interested. It is proposed to prepare a contract to be used by servants.

The members of the undersigned societies, and the other ladies who keep servants, are requested to adhere as much as possible to the above "Directions". Thanks to a better organization and simplified domestic economy, thanks also to a greater participation in household duties by the mistress of the house and her daughters, it will be possible, in many cases to lessen the servant's work. The latter by a conscientious employment of her time and the faithful accomplishment of her duties, will facilitate the realization of the proposed ameliorations. With mutual good will, a too scrupulous interpretation of the above mentioned points, may be avoided, and an agreeable understanding in each household will facilitate the organization of a rule for work, which will permit the carrying out of a well regulated household, and will spare the servant's health, and give them the right to freely dispose of a part of their time.

The following societies have adopted the "Directions":

The Zurich Section of the Society of Public Welfare of Ladies and Martha Society.

The Zurich Section of the Society of the Friends of Young Women.

"Ladies' Union Fraternity".

Direction of the Ladies' Central of Zurich.

Association of Ladies of the French Church.

Union of the Societies of Catholic Servants of Switzerland.

Society of Servants of Zurich and its neighbourhood.

The rules and bylaws of the Society of Servants of Zurich and its neighbourhood adopted at the inaugural meeting at Clockenhof on July 6, 1919, are as follows:

1. This Society seeks to ameliorate the social condition of servants, by means of an amicable understanding with the Ladies' Societies, and to promote the professional and intellectual formation of its members.
2. The Society, as such, is neutral, as to politics and religion.
3. Admission to the society is made through the administration, after having notified a member of the Council or by having one's name inscribed on a list to be found by those interested at the Sunday reunion.
4. Each member must pay at least 50Rp. (12 cents) a month.
5. The society names a council of seven members, composed of president, vice-president, secretary, treasurer and three assessors. The president only is elected by the society. The other members of the administration divide the charges between themselves. (See below transitory arrangements.)

6. The council is elected for two years at the April meeting. The members who resign before are replaced at a meeting of the Society.

7. The administration prepares the agenda of the general meetings and carries out their decisions. It appoints the necessary numbers of controllers to gather the monthly contributions in their respective districts, and report all changes of address. It appoints for two years, auditors, who must audit the accounts before the April meeting.

8. The council meets at least every two months to report on questions of a professional character or of general interest. It organizes a New Year's festival and a summer excursion.

9. In the April reunion the administration gives an account of its work and the treasurer an account of its finances.

10. To vote, all that is required, is to have a majority of those members present; in case of a tie, the president's vote counts double.

11. Members who continually act in a manner contrary to the interests of the society, or who purposely trouble the peace of its members, or again those who during three months have failed to pay the monthly contribution, can be expelled by the council from the society.

12. To dissolve the society, it would require the vote of three-quarters of the members.

TRANSITORY ARRANGEMENTS.

A provisional council is elected up to the spring of 1920. Up to that date also the administration of affairs can be confided to persons who do not belong to the servant class.

Other Countries

The reply from Belgium stated that very little organized effort had so far been made, but indicated that some action might be taken in the near future. The reply from Japan stated that little had yet been done, but that owing to the growing spirit of individualism among domestic workers, the need for some organized effort towards standardization was becoming rapidly more pronounced.

In Persia, the government was contemplating opening schools of instruction for Household Workers.

Reasons Why Housework is Unpopular

From the foregoing information gathered from many countries, from the opinions of prominent industrial and social welfare authorities who have studied the household problem, and from our own investigations, we conclude the following to be the reasons which predominate in keeping girls from housework:

1st. Social inferiority. Not from the employer's point of view, but from workers in every occupation, from office work to selling chewing gum and popcorn.

2nd. No stated hours of work.

3rd. Loneliness, confinement and absence of encouragement, of stimulus from other workers, where only one maid is kept.

4th. No opportunity for advancement. This is much emphasized.

5th. Often uncomfortable surroundings.

6th. Housework offers fewer chances of marriage.

SUGGESTED REMEDIES.

Social Inferiority—can be removed by housewives placing girls on the same footing as other workers; abolishing the use of Christian name if desired; time for meals and neat equipment for dining table. In too many homes the kitchen walls bound the houseworker's horizon. She works, eats, entertains her visitors there. Shops and factories and offices might lose in popularity, if the workers were forced to use them as dining, working, living and social rooms.

Day's work arranged to take from 8—9 hours over a spread of 13 hours. This will mean less service for afternoon teas, evening attendance, etc., but where one maid is kept, it is the only fair way.

Not any two homes are quite alike as to conditions, but in each home work can be systematized.

When schedule of work is finished, leisure time between tasks should belong to the workers without question from the mistress.

Endeavours should be made to bring housework up to the standard of a profession.

Uncomfortable surroundings, when they exist, can be easily remedied by the mistress.

As to housework offering fewer chances of marriage, men seeking wives among the home trained workers, greatly increase their chances of a happy marriage, if they only knew it.

Many thinkers on the subject advocate when possible that workers live out. This system, where it obtains, wipes out objections to housework on basis of social standing, confinement, chances of meeting people, and deserves consideration for the future.

Conditions on the farm are somewhat different to those in cities. The social inferiority complained of is very often absent on a farm, where the farmer and his help, both male and female, eat at the same table, and share the family life.

While hours of work cannot very well be standardized during the summer, long working hours in that season are more than made up for by the leisure of the winters, where work on a farm is at a minimum.

More scope for advancement exists in the country, as many girls marry prosperous young farmers. It should also be mentioned that Canadian farm life is much more comfortable on the whole, than the agricultural homes in most of Europe.

RECOMMENDATIONS.

After mature deliberation, upon information obtained, we are prepared to recommend the following, as a means toward working out a solution of the household help problem:—

Make a practical study of housework and housekeeping a part of the School Curriculum for *all girls*—beginning preferably at the age of 10—12 so as *catch and hold* interest early in life.

Utilizing for this purpose existing agencies throughout the Dominion, and

enlarging their scope to meet these needs.

That since it is on the women who employ help that rests the onus of placing housework on a business basis, to them we appeal, to begin now to give houseworkers equal opportunities with the office, store and factory workers. Employers pay a girl for work, not for her life. Give her a chance for self-development and graded financial returns.

An appeal is made to all housewives whether in large or small establishments, to simplify housework in non-essentials. Greater participation in household duties is recommended on the part of the mistress of the house and her daughters, to lessen the maid's work, especially when only one is kept.

Further, by Standardization of Household Service—as Mrs. Raymond Robins suggests, raise it to the status of a profession, as nursing now is.

Once this is accomplished, we think the difficulty in securing the household helpers will disappear, as the work will appeal to a larger class of intelligent girls. Housewives need education along standardization of work and working hours, fully as much as houseworkers. They should arouse themselves, and take a business view of the question. If mistresses want constant service, and can afford it, they can employ a double shift of workers, otherwise they must go without continual all-day service. No business man expects office or factory help to work overtime without extra pay.

But there is one thing any housewife can do, and that is to arrange a daily schedule occupying so many stated hours. Should housewives not understand household management—and many do not—they should set about learning it. There is more than *instinct* needed in managing a home today, and it is a necessary part of every girl's training.

Not housework itself, but the conditions surrounding it, cause young

women to shun it. It is here, where the "Mistress Problem" comes in. Housework, once it is raised to the status of a profession by training schools, standards of efficiency, certificates and diplomas, will become as popular as it deserves to be, for, after all, it is fundamentally the real vocation of the majority of women.

Any society or organization, with or without provincial help, contemplating an effort to establish training schools for houseworkers in Canada and thereby raising household work to the standard of a technical profession, will find a considerable amount of information in the foregoing report. Sweden, to our mind, seems to be in the vanguard of progress on this question, but might seem a little advanced for Canadian ideas. On the other hand, Switzerland's method deals with this question in a more conservative manner while safeguarding the interests of the servants and assuring the employers of a fair return for wages paid, and might commend itself more readily to Canadian housewives.

A concerted effort among women's organizations in Canada to standardize domestic service would, we think, enlist federal and provincial sympathy, and it would be only a short time before we had all over our country these training schools where thousands of young women, whether to earn a living, or in their own homes, would acquire the scientific knowledge of housework rendered absolutely necessary from modern economic conditions.

On the home rests this huge structure we call civilized society, and its continued maintenance largely depends on the intelligent and competent administration of the home. We shall otherwise drift to a communistic form of living (advocated by extreme socialists), but abhorrent to many people, and perhaps more so to the British, where everything that made home so dear would be but a memory.

(Sgd.) HENRIETTA POPE,
Chairman of Committee.

REPORT OF THE EMPLOYMENT SERVICE OF CANADA FOR THE FOUR WEEK PERIOD OF JANUARY 3 TO JANUARY 29, 1921

REPORTS from employment offices to the Dominion Headquarters of the Employment Service of Canada, Department of Labour, for the four-week period of January 3 to January 29, 1921, show an increase in the number of placements as compared with the preceding period. The offices reported that 15,321 placements were effected during the period as compared with 13,977 reported during the previous four weeks, an increase of 1,344.

During the period under review regular placements by weeks were reported as follows: week ended January 8:—3,646; week ended January 15:—4,014; week ended January 22:—3,927; week ended January 29:—3,734. In addition, 5,093 casual jobs (employment of a duration of less than one week) were supplied and were reported by

weeks as follows: week ended January 8:—1,278; week ended January 15:—1,260; week ended January 22:—1,468; week ended January 29:—1,087. Placements in casual work during the preceding period totalled 4,342, representing an increase during the period under review of 751.

The accompanying chart presents in graphic form the number of applications, vacancies and placements week by week, since the beginning of October, 1919. It will be noted that the curve for applications indicates a steadily increasing number of applicants registered at the offices, during January of this year. This increase may be largely attributed to registration in the larger municipalities in connection with the operations of the Emergency Relief Fund. The chart indicates also that during the period under review a downward tendency was shown by the curve for vacancies, this decline be-

ing due in part to the curtailment of activities by employers, during the annual stocktaking and inventory period. The curve for placements shows a marked decline, following closely the curve for vacancies.

The accompanying table presents in some detail the work of the offices for the four-week period ended January 29, 1921. It will be noted that at the beginning of the period (January 3) there were 20,484 applicants unplaced. This compares with 34,318 applicants unplaced on January 29, 1921, after allowance had been made for cancellation and placements. The number of vacancies remaining unfilled on January 3 totalled 6,328, while the unfilled vacan-

cies on January 29 were reported as 7,934. On comparing the above with the corresponding period of last year, it may be of interest to note that the total number of applicants unplaced on January 31, 1920, totalled 27,641, while the number of vacancies unfilled on this date was 10,039.

During the period at present under review, the number of applications registered at the offices was 41,599, of which 36,846 were men and 4,753 were women. The number of vacancies notified by employers to the service during this period totalled 19,144. When compared with the preceding period, this represents a considerable increase in the number of vacancies recorded of 2,465.

UNEMPLOYMENT IN TRADE UNIONS AT THE CLOSE OF JANUARY, 1921, AS REPORTED BY UNIONS MAKING RETURNS

THE present article on unemployment among the members of local trade unions deals with unemployment as at the end of January, 1921, and is based on returns received from 1,538 labour organizations with a combined membership of 197,928 persons. For all occupations reporting, 13.07 per cent of the members were unemployed as compared with percentages of 13.05 at the end of December, 1920; 4.02 at the close of January, 1920, and 3.87 at the end of January, 1919.* Unemployment, as used here has reference to involuntary idleness due to economic causes. Persons occupied in work other than their own trades, or who are idle because of sickness, or as a direct result of strikes or lockouts, are not considered as unemployed. As the number of unions making returns varies from month to month with consequent variation in membership upon which the percentage of un-

employment is based, it should be understood that the percentages of unemployment figures have reference only to those unions reporting.

The percentage out of work at the end of January showed a nominal increase over that for the preceding month, due to a slight increase in slackness in the building and construction and transportation groups, which lessened activity, however, was largely off-set by gains in employment in the manufacturing and mechanical industries, particularly in the garment trades.

Table I on next page summarizes the returns by provinces. Nova Scotia and Prince Edward Island, New Brunswick, Quebec, and Saskatchewan showed slight decreases in the percentages of unemployment as compared with December, with large increases over January of previous years. In Ontario, Manitoba, Alberta and British Columbia there was more idleness than in any of these months.

*Revised figures.

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES.

Month	Nova Scotia & Prince Edward Island	New Brunswick	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia	Canada

Jan. 1921...	5.85	8.11	13.27	14.16	8.81	10.09	9.72	21.56	13.07

The percentages reported unemployed in the different groups of industries are indicated in table II on page 404.

Unemployment in the manufacturing and mechanical industries, as indicated by 357 unions with a combined membership of 50,076 persons was considerably less than in December, but the percentage out of work was much larger than in January of the preceding years, 14.67 per cent of the members being out of work as compared with percentages of 21.39, 2.96 and 3.32 in December, 1920, January, 1920 and January, 1919, respectively. As mentioned previously, most of the increase in activity in the first comparison occurred in the clothing and laundering group, largely in Montreal, while the slackness as compared with January of preceding years was general. The percentages out of work, however, among workers in food, tobacco, liquors, textiles, cordage and

carpets, pulp, paper and fibre, boots and shoes, and glass bottle blowing were smaller than those registered during December, 1920, but in almost every case they exceeded the percentages reported in January, 1920 and 1919. Employment in metals, machinery and conveyances, printing, publishing and paper goods, wood-working furniture and jewelry was less active than in any of the months used in this article for comparative purposes. In the first named group the increase in idleness was largely caused by shortage of work in shipyards, particularly in Quebec and Ontario, but also in British Columbia.

In addition to the members entirely out of work, a large number of moulders, blacksmiths, boilermakers, metal polishers, pattern makers, machinists, bakers and confectioners, cigarmakers, textile workers, tailors, garment, fur, pulp and paper workers, typographers, pressmen, bookbinders, lithographers, stereotypers, boot, shoe and leather workers, upholsterers, piano and jewelry workers were reported on short time.

Reports from 637 organizations of transportation workers, with an aggregate membership of 81,596 persons, indicate that 7.98 per cent of the members were out of work as compared with percentages* of 6.09, 1.92 and 1.80 in December, 1920, January, 1920, and January, 1919 respectively. This increase in unemployment may be attributed to inactivity of steam railway employees, whose returns constituted about 80 per cent of the entire group membership reporting. Within this group large percentages of unemployment were recorded by unions of trainmen and maintenance of way employees. While conditions among carmen showed some improvement in comparison with the December returns, this organization, like those of other railroad employees, registered less employment than in January of the preceding years. Navigation workers and street and electric

*Revised figures.

railway employees showed larger percentages out of work than in previous months used in this article for comparative purposes, the increase in idleness in the former being due to seasonal lack of employment for sailors registered in Quebec and Ontario. It may be noted in the former sub-group that returns from longshoremen are omitted for the first time, the reason being that on account of the casual nature of the work, figures representing conditions on the last working day of any month cannot accurately reflect employment in the industry. In order, however, that comparison may be made with preceding months the figures have also been taken from previous tabulations and the percentages are therefore comparable. Teamsters and chauffeurs did not report as much unemployment as in December, but the percentage out of work was somewhat larger than in January, 1919 and 1920. As in the manufacturing group, a large number of the organizations making returns registered a considerable amount of short time.

In the mining, quarrying and refining of ores group, reports were tabulated from 38 organizations with a combined membership of 12,597 persons, showing that 1.52 per cent of the members were out of work as compared with unemployment percentages of 1.25; .84 and 1.42 in December and January, 1920, and January, 1919, respectively. Miners showed slightly more activity than in the preceding month and also than in January, 1919, but the percentage out of work was somewhat larger than in January, 1920. Mill and smeltermen registered less employment than in the three comparisons. Some unions of miners reported that not all their members were working full time.

The percentage out of work in the building and construction group, as indicated by 280 unions having a combined membership of 30,440 persons was 30.77 as compared with 26.47 in December and with 11.77 and 16.29 in January 1920 and 1919 respectively. Bricklayers, masons and plasterers, carpen-

ters and joiners, granite and stone cutters, painters, decorators and paper hangers, tile layers, lathers and roofers, steam shovel and dredge men and hod carriers and building labourers reported larger percentages of unemployment than in any month used in this article for comparative purposes. Electrical workers and plumbers and steam fitters showed slightly more activity than in the preceding month, with less employment than in the corresponding month in 1920 and 1919. The percentage out of work among bridge and structural iron workers was larger than in December 1920 and January, 1919, but showed a nominal decline in comparison with January of last year. A large number of these unions reported that many of their members were on short time.

In the public employment group, as indicated by returns received from 76 organizations with a total membership of 5,917 persons, there was slightly more unemployment than in any of the months used here for comparison, 5.02 per cent of the members having been out of work as compared with percentages of 1.26, .68 and .33 in December and January, 1920 and January, 1919 respectively. This increase may be attributed to slackness for civic employees, partly due to seasonal causes.

The percentage out of work among logging and lumber workers, as recorded by three unions with 2,043 members, was 9.79, as compared with 12.68 in December. Figures for comparison with January of previous years are not available. Reports covering 1,886 fishermen showed that there was less activity in this trade than in December and January, 1920; while no returns for 1919 are on file.

Unemployment in the group of miscellaneous trades, as registered by 143 organizations with an aggregate membership of 13,373 persons, was somewhat less prevalent than in December and January, 1920, but the percentage of idleness was larger than in January, 1919. Hotel and restaurant employees

and barbers were not as fully employed as in any of the months used here for comparison. Stationary engineers and firemen reported reduced activity as compared with December, but the percentage out of work was smaller than in January of previous years. Among unclassified workers and musicians and theatre employees there was less unemployment than in the preceding month

and also than in the corresponding month of 1920. There were, however, increases in unemployment as compared with January, 1919. Some of these organizations, in addition to the total unemployment, reported considerable short time.

The tabular statement on pages 406-407 presents the returns in some detail.

EMPLOYMENT CONDITIONS IN CANADA FROM JANUARY 23 TO FEBRUARY 19, 1921, AS REPORTED BY EMPLOYERS

WEEKLY reports from employers to the Dominion Headquarters of the Employment Service of Canada, Department of Labour, during the four weeks from January 23 to February 19, inclusive, show steady declines in the volume of employment afforded by these employers, the accumulated losses being 7,765 persons. The change reported for each week as compared with the preceding week is as follows:

Week ending January 29, a decrease of 235 persons or .04 per cent.

Week ending February 5, a decrease of 2,786 persons or .45 per cent.

Week ending February 12, a decrease of 2,371 persons or .39 per cent.

Week ending February 19, a decrease of 2,373 persons or .38 per cent.

During the four weeks under review, employment conditions in the different parts of Canada, with the exception of British Columbia, were substantially the same, decreases on the whole being reported in the Maritime Provinces, Ontario and Quebec, and the Prairie Provinces. Firms in British Columbia, however, registered net increases, the declines in the first and third weeks of

the period being more than offset by the expansions in the second and last weeks. Within the Maritime district, the most pronounced losses occurred in Nova Scotia, where they aggregated 2,538 persons. In New Brunswick there was a nominal increase during the week of February 5 only, but the contractions in payroll in the remaining three weeks were very much smaller than those recorded in the former province. The period opened with considerable recovery from the losses previously reported in Ontario, but during the last three weeks steady decreases were registered. On the other hand, concerns in Quebec recorded increases to their staffs during the first two weeks in February, the combined declines, however, in the first and last weeks of the period more than offsetting these gains. In the Prairie Provinces the most substantial losses occurred in Manitoba, this province and Alberta showing continuous shrinkages in payroll during all four weeks of the period. In Saskatchewan there was an increase only during the week of February 12, but the contractions in this province were not nearly as marked as in the adjoining districts.

A summary of the returns by industrial groups shows that concerns in Lumber and its Products, Leather Goods, Textiles and in the group of Miscellaneous Manufacturing Industries (largely Tobacco, Chemicals and Musical Instruments) registered increased employment during each of the four weeks under review. In Edible Animal Products, Fur Goods, Wood Distillates and Extracts and Water Transportation there were net gains, with declines during one or more of the weeks. On the other hand, firms in Logging, Edible Animal Products, Clay, Glass and Stone Products, Iron and Steel, Non-Ferrous Metal Products, Pulp and Paper, Rubber Goods, Coal and Metallic Ores, Mining, Hotels and Restaurants, Retail and Wholesale Trade and Local Transportation reported decreases in employment on the whole, with increases during one or more of the weeks. In Building and Railway Construction, Non-Metallic Minerals other than coal, Quarrying, Telegraph and Telephone Operation and Railway Transportation there were steady declines.

The increase in activity in Textiles, which represented partial recovery from the losses which were recorded during the last three months of 1920, occurred largely in the Garment, Hosiery and Knit Goods, and Thread, Yarn and Cloth Divisions, mainly in Quebec and Ontario. The gains in Leather also reflect recovery from previous reductions. In Lumber and Its Products the expansions in operations were reported largely in Sawmills, but also in Furniture Factories, indicating, in the latter, recovery from inventory and holiday losses, and in the former, the commencement of seasonal activity in the mills.

The greater part of the additions to staffs made by firms in the Miscellaneous Group occurred in the Tobacco Division, while in Edible Plant Products they were reported in Confectionery and Sugar Refining Establishments.

The most pronounced declines in employment were reported in Railway Transportation, where the contractions amounted to 4,332 persons. These declines were wide-spread in application; if anything, however, they were more marked in Ontario and the Prairie Provinces than in the other districts. In this Group the reductions reflect largely the general depression, while those in Building and Railway Construction, also large, were partly the result of seasonal inactivity. In Clay, Glass and Stone Products most of the losses were reported in Glass Factories. In Iron and Steel Products there were marked fluctuations, but the increases were more than offset by the pronounced decreases which were reported in the different parts of the country during every week of the period, the largest changes occurring in the Crude, Rolled and Forged, Railway Car and Steel Shipbuilding Branches. Some slackness was shown in Abattoirs. The declines in Logging and Pulp and Paper were partly indicative of seasonal dullness, those in the former reflecting the inactivity between cutting and river-driving operations, hastened this year by the mild winter and the lack of snow which was reported in some districts. The mild weather also had an adverse effect upon employment in Coal Mines, particularly in Alberta.

The accompanying chart shows the weekly percentage of change in the number of persons on payrolls since the

base week, (January 17, 1920) as reported by those employers making returns, the number averaging over 5,000 firms a week. The returns for the week of January 17, 1920, are being taken as base figures. It had been the intention to take the week of January 1, 1920, but this was found impracticable because of the abnormal situation at that time, due to the annual inventory and holiday period, and the consequent reductions in staffs. The week of January 17 coin-

cides fairly closely with the termination of this season and accordingly reflects more normal conditions.

The curve remained practically steady during the four weeks under review with the exception of a slightly upward tendency manifested during the week of January 29. There was very little fluctuation shown during the three following weeks, the percentage below base being around 11.

the provinces except Manitoba participated in this decrease, the reduction of \$925,590 in Ontario being the largest.

As compared with the figures for the corresponding month in 1920, there was a decrease of \$1,580,366 or practically 40 per cent, the value for January, 1920 having been \$3,952,878. In this comparison there were increases only in Manitoba and British Columbia, that of \$92,948 in the former being the larger, while the decline of \$1,344,111 in Ontario was the most pronounced.

Of the larger cities, Montreal and Vancouver registered reductions in the value of the permits issued as compared with December, with increases over January of last year. Winnipeg and Edmonton showed increases in both comparisons, but, on the other hand, Toronto reported losses in both cases.

Of the smaller centres, Sydney, Belleville, Fort William, Hamilton, Sault Ste. Marie and South Vancouver recorded increases as compared with the preceding month and also in comparison with the corresponding month of 1920.

The returns from 35 cities formerly used in this report (which are distinguished by asterisks and which are also tabulated separately for statistical purposes) show that the total value of the building permits issued by these cities was \$2,128,742 as compared with \$4,401,908 in December, 1920. There was therefore, a decrease of \$2,273,166 or nearly 52 per cent in comparison with the returns for the preceding month. As compared with the corresponding month of last year, moreover, there was a decline of \$1,581,183 or practically 43 per cent, the value for January, 1920, having been \$3,709,925.

EMPLOYMENT FOR CIVIC EMPLOYEES IN FIFTEEN CITIES, JANUARY, 1921

R EPORTS from fifteen cities showing the number of civic employees temporarily employed and the wages paid these persons during the month of January, showed an increase of practically 18 per cent in the number of employees and of slightly over 3 per cent in the wages paid, as compared with the preceding month. In January, 1921, 13,129 persons were temporarily employed, and the wages amounted to \$893,591.97 as compared with 11,133 employees and an aggregate payroll of \$922,632.22 in December, 1920.

In comparison with the returns for the same period in 1920 there were increases of nearly 49 per cent in the number of employees and of almost 33 per cent in the wages paid, there having

been 8,832 employees with a total payroll of \$673,123.04 in January of last year. These increases were largely the result of special work undertaken by the municipalities to relieve the unemployment situation, as were also the increases over December.

Montreal, Ottawa, Hamilton, Winnipeg, Brandon, Saskatoon, Calgary, Vancouver and Victoria registered increases in the number of persons temporarily engaged as compared with both December and January, 1920. St. John and Moose Jaw showed gains as compared with the preceding month, with declines in comparison with January of last year. On the other hand, London recorded a reduction as compared with December but an increase over the corresponding

month of 1920. At Regina, Toronto and Edmonton there were decreases in both cases.

As to wages, St. John, Montreal, Ottawa, Winnipeg, Brandon, Saskatoon, Vancouver and Victoria reported increases both as compared with the figure

for December and January, 1920. Toronto, Hamilton, London and Regina registered reduced payrolls in the former, with increases in the latter comparison. The reverse is true for Calgary, while at Edmonton and Moose Jaw, there were decreases in both cases.

WORK OF EMPLOYMENT EXCHANGES IN THE UNITED KINGDOM

Recommendations of Departmental Committee of Enquiry

IN June, 1920, a committee was appointed by the British Ministry of Labour "to examine the work and administration of the Employment Exchanges in Great Britain and to advise as to their future." The report of the Committee, which recently appeared (Cmd. 1054) is to the effect that "the employment exchanges must be retained as a national system, that they are a necessary corollary to the State system of unemployment insurance, and that in the interests of national economy they should be made fully effective for their purpose." The unemployment insurance Act of 1920 (see LABOUR GAZETTE, September, 1920, page 1199) which was enacted during the inquiry, increased the number of persons compulsorily insured against unemployment from about 3¾ millions (the number insured under the National Insurance Act of 1911, and subsequent acts) to about 12¼ millions. The new act follows the precedent of the previous acts in being operated through the Employment Exchanges, except in so far as special arrangements may be made to enable definite groups of work people to "contract out" from the scheme. As a general rule, unemployed workpeople present their claim for unemployed benefit at the employment exchanges, attend daily at the exchanges during unemployment, and each week receive from the exchanges the benefit to which they are entitled.

The exchanges are thus the only agency whereby the Unemployment Insurance Act is administered. While, however, designed as a means of enabling the government to operate a system of unemployment insurance, the exchanges were more directly intended to bring together those wanting work and those wanting workmen. The service was offered mainly to unorganized workers, and provided for this class assistance similar to that given by the organized trade unions to their members. In addition to their normal work the employment exchanges took a prominent part during the war in the mobilization of the national resources for war purposes. Since 1917, and throughout the demobilization period the exchanges were associated with Local Unemployment Committees, consisting, in the main, of representatives of the employers and workpeople in equal numbers, with a chairman appointed by the Department. The exchanges were also chosen as the means of administering the out-of-work donations, a system of free unemployment allowances granted to discharged soldiers or war workers which has been described in previous issues of the LABOUR GAZETTE. Special facilities also exist at each exchange for providing for the employment of boys and girls under 18 years of age, and last year 245 juvenile employment committees were working in co-operation with the exchanges.

Dealing with criticisms which had been directed against the exchanges on the ground that neither employers nor workpeople availed themselves of their agency to an extent sufficient to justify the large outlay involved, the committee finds that most of these charges are without foundation. The actual daily service averages, on the basis of 300 days to a year, for the last normal year before the war, and for the first six months of 1920 were as follows:

	Daily averages	
	1913	1920
Registrations by workpeople.....	9,454	10,653
Vacancies notified by employers.....	3,944	5,021
Placings through exchanges.....	2,984	3,451

The following table shows for the same periods the average results per exchange per day, the figures for branch offices being credited to the exchange with which they are associated:—

	Daily Averages	
	1913 (412 Ex- changes)	1920 (395 Ex- changes)
Registrations by workpeople.....	23	27
Vacancies notified by employers.....	10	13
Placings through Exchanges.....	7	9

The exchanges were used to the greatest extent (as compared with other industries) by workers in the building, and in the engineering and ironfoundry industries, and by employers of general labour and transport industries; while for women, domestic service accounts for two-thirds of the placings, with the clothing and textile industries next in order. The Committee expresses the opinion that the exchanges have not been fully used by and for highly skilled organized labour and the highest grades of unorganized labour. The workers in

the skilled trade unions get situations through personal touch with employers, foremen or comrades, and use the exchange as a last resort; in the less organized and unskilled trades, however, the exchanges have had value, being the only adequate medium, without payment, of contact between unemployed workers and employers. The main objection to the exchanges, from the side of both employers and workers, is on the ground of inadequate specialization in the staffs engaged in dealing with applications. There is also some distrust on the part of trade unions, on the ground that the exchanges have to accept notifications of vacancies and to communicate them to applicants, whether the rates offered are standard rates or not.

The new insurance act permits entire industries to contract out of the scheme, and to undertake, through a joint committee of employers and employed, the management of all unemployment insurance work arising in connection with their members. The state contribution in these cases is limited to an amount not exceeding three-tenths of the contribution the state would have made if the members had remained under the general scheme. The industries whose workers "contract out" on this plan, make no use of the exchanges, but for all other industries, the exchanges afford the only means whereby the workers can be insured against unemployment under the Act of 1920.

In regard to the cost of the exchange service it is stated that the total cost of the Department, divided by the number of placings, gives about 17 shillings as the average cost of each placing in 1913. For the year 1919-20, under the exceptional conditions then prevailing, the figure (including the cost of administering out-of-work donations and other activities), was just under £3. The Labour Ministry's estimate of the cost of the exchanges in a normal year, including administration of the Insurance Act of 1920, was £2,200,000, an amount between one-fifth and one-sixth of the fund to be administered. In the opinion

of the Committee there is a *prima facie* case for believing that the central office, the divisional offices, and the central claims and record office are too costly and cumbersome.

Among other recommendations the Committee suggests more centralizing of work in each area, thus reducing office expenses; provision for greater privacy at interviews; higher specialization of sections at each exchange, or the specialization of entire exchanges to particular industries; greater care in the choice of suitable staffs; the practice of visits by exchange agents to local works; that the Minister of Labour should review the staffs with a view to reorganization; that the Local Employment Committee should act as an advisory body in regard to the exchanges and should have further powers in regard to the appointment of Referees under the new Act, and advise the Ministry as to appropriate expenditure upon public contracts in times of depression; that the Ministry should comply to the utmost with the expressed wishes of these local committees; that parties to local wage agreements should be enabled to secure the recognition by

the exchanges of the rates thereby established; that the exchanges should not be available to employers or workers during a trade dispute; that the registration at the exchange of workers who are in permanent employment should be discouraged; that in place of the present dual responsibility of the Ministry of Labour and Board of Education for juvenile employment, a single government department should be made responsible; that the service of exchanges should be available for all classes of employers and workers; that special schemes should be devised enabling industries "contracting out" ultimately to administer their own insurance; that the exchanges should be placed at the service of industries having special schemes; and that economies should be effected in central and divisional administration.

The Committee's report is approved in the main by all the members but one, whose ground for objection is that sufficient attention was not given by the committee to the consideration of public expenditure in relation to the value of the services rendered by the exchanges.

EMPLOYMENT IN UNITED STATES DURING 1920

The United States Employment Service of the Department of Labour has published in the first issue of the INDUSTRIAL EMPLOYMENT SURVEY BULLETIN, statistics dealing with the unemployment situation in the United States during the past year. It is stated that in January 1921, in 48 states and the District of Columbia, there were 3,473,446 less workers employed in industries than in January 1920—a reduction of 36.9 per cent. These figures are based on a consensus of information from neutral bodies, State labour departments, State commissioners of manufactures, state and municipal employment services, workmen's compensation bureaus, employers' and employees' organizations,

and all other sources competent to furnish authoritative information. The estimated unemployment between December 15, 1920, and January 15, 1921, in 182 principal industrial cities totalled 1,802,755 persons. During this period unemployment in the motor industry was at its peak. The report states that in other trades and industries the next survey probably will show still greater decrease in employment. The total labour reduction in the nine geographical divisions surveyed is placed at 35 per cent between January 1920 and January 1921.

The following list shows the percentage reductions in employment in various trades:

Automobile and accessories	69 per cent.
Building Trades	52 per cent.
Shoe and leather	35 per cent.
Clothing	35 per cent.
Lumber and House furnishings	32 per cent.
Clay, glass and cement....	19 per cent.
Packing and food industries	19 per cent.

Attention, however, is drawn to the fact that with the present organization in the United States, it has not been possible to take into account filtrations of labour between districts and the consequent re-employment and re-distribution.

Other information is to the general effect that industrial operations have not on the whole increased sufficiently to effect any reduction in the existing widespread unemployment, although a slight increase in the activity of leading New England industries has brought a certain measure of relief. In the South and

West the position has become more acute, a striking example being that of the San Francisco District previously only slightly affected, in which unemployment is now abnormally great for this season of the year. Unemployment in New York State in January increased about 4 per cent; it is widespread among longshoremen, freight handlers, dock workers and seamen. In both the Philadelphia and Atlanta districts, unemployment has greatly increased. Everywhere slackness in the building industry appears to affect the employment market adversely. The railroads have made great reductions in staffs, and the official organ of the Railway brotherhood claims there are over 200,000 railroad workers idle. Accompanying this general condition there has been a steady reduction in wages; about 100,000 textile workers in New England have had their wages reduced on an average of 22 per cent. and further reductions have been made in the boot and shoe industry.

FAIR WAGE CONTRACTS, FEBRUARY, 1921

DURING February the Department of

Labour received for insertion in the LABOUR GAZETTE the following information relative to nine fair wage contracts, of which five were awarded by the Department of Public Works, and four by the Department of Railways and Canals. All the contracts contained the usual fair wage clause which provides for the prompt payment of such wages as are current in the district in which the work is to be performed, and for observance on the various works under contract of the prevailing hours of labour, and which otherwise prevents abuses and secures the legitimate rights of the labour employed.

A statement was also received as to supplies ordered by the Post Office Department, subject to the Regulations for the Suppression of the Sweating System, the securing of fair wages, etc.

DEPARTMENT OF PUBLIC WORKS.

Addition to third class detention building, Partridge Island, Quarantine Stn., St. John, N.B. Name of contractor, James E. Kane. Date of contract, January 28, 1921. Amount of contract, \$20,338.35.

Supply and installation of post office fittings, Annapolis Royal, N.S. Name of contractor, The J. T. Schell Company, Limited. Date of contract, February 8, 1921. Amount of contract, \$2,635.

Electric lighting of grounds and additions to transmission lines Westminster Psychopathic Hospital, London, Ont. Name of contractor, F.R. Dark, London, Ont. Date of contract, February 9, 1921. Amount of contract, \$3,676.

Execution of repairs to public wharf, Summerville, N.S. Name of contractors, Naugle & Hiltz, Lawrencetown,

N. S. Date of contract, February 22, 1921. Amount of contract, unit prices.

Construction of dry dock, Esquimalt, B. C. Name of contractor, P. Lyall & Sons Construction Co. Ltd. Date of contract, February 17, 1921. Amount of contract, schedule of prices.

DEPARTMENT OF RAILWAYS AND CANALS.

Construction of a 350-ton, 3 track, mechanical coaling plant and wet sand bin, etc., at Chaudiere Junction, Que. Name of contractor, Williams and Wilson Limited. Date of contract, February 10, 1921. Amount of contract, \$40,800.

Construction of bridges over the Cocagne, Little Buctouche, and Petitcodiac Rivers, N. B. Name of contractor, Dominion Bridge Company, Limited. Date of contract, February 10, 1921. Amount of contract, schedule of prices.

Construction of bridge at Mile 4.2, Pugwash Subdivision, County of Cumberland, N. S. Name of contractor, The Hamilton Bridge Works Company, Limited, Hamilton, Ont. Date of con-

tract, February 26, 1921. Amount of contract, schedule of prices.

Erection of a highway steel swing bridge, Trent Canal, Bobcaygeon, Ont. Name of contractor, McGregor & McIntyre Limited, Date of contract, February 15, 1921. Amount of contract, \$13,452.

POST OFFICE DEPARTMENT.

The following is a statement of payments made in February for supplies ordered by the Post Office Department subject to the Regulations for the Suppression of the Sweating System, the securing of fair wages, and the performance of work under sanitary conditions.

Nature of orders	Amount of orders
Making metal dating stamps and type and other hand stamps and brass crown seals.....	\$ 2,568.18
Making and repairing rubber stamps, daters, etc.....	326.19
Supplying stamping material, pads. and ink.....	1,057.00
Supplying mail bag fittings.....	1,215.40
Making up and supplying letter carriers' uniforms, etc.....	2,822.20
Repairing letter boxes, etc.....	169.70
Repairing scales.....	5.10
Supplying motor trucks (chassis).....	41,237.87

RECENT INDUSTRIAL AGREEMENTS

THE following agreements and schedules of wages and working conditions have recently been received in the Department. Verbal agreements are included in this record as well as signed agreements, the term "verbal agreement" being understood to embrace schedules of rates of wages and hours of labour, with other conditions of employment agreed upon between the employees and a majority of the employers concerned, and in effect although not signed. In the case of each agreement the rates of wages in the principal occupations are given, together with the significant points as to working conditions and a summary of other information of general interest.

Foods, Liquors and Tobacco

MOOSE JAW, SASK.—ROBIN HOOD, LIMITED, AND EMPLOYEES. Verbal agreement in effect from April, 1, 1919.

This agreement was summarized in the February, 1920, issue of the LABOUR Gazette, page 172.

On September 1, 1920, a straight increase of 10 cents per hour over the schedule of April 1, 1919, was put into effect.

Clothing

SAULT STE. MARIE, ONT.—Merchant TAILORS, AND JOURNEYMEN TAILORS' UNION OF AMERICA, No. 73. Agreement in effect from February 12, 1921, until September 10, 1921, with 15 days' notice

of change; no notice being given, agreement to stand renewed for six months.

Wages: Per week—tailors, \$33; helpers, \$22.50. Women to be paid same scale as men for same class of work.

One helper to every three skilled men.

All employees to be Union Members or to join within ten days.

Hours of Labour, forty-eight per week. Overtime, time and one-half; Sundays and holidays, double time. The weekly system to prevail in all departments, coats, pants, vests and busheling.

In event of disagreement, no cessation of work until matter has been investigated.

Work at all times to be divided equally as nearly as possible, particularly in the slack months. No person to be discharged through scarcity of work during slack season.

Printing and Publishing

HAMILTON, ONT.—EMPLOYING PRINTERS' ASSOCIATION AND TYPOGRAPHICAL UNION, No. 129.—Agreement in effect from January 1, 1920 to June 30, 1921.

Offices of the above-mentioned employers to be guaranteed industrial peace in connection with matters covered by this agreement.

Wages to be paid weekly; a week's work in job rooms to consist of 48 hours. On and after May 1, 1921, hours to be eight per day; four hours on Saturdays.

No work to be executed by any office under this agreement if received from, or destined for any office in which a strike exists. Members may refuse to execute struck work received from or destined for unfair employers.

Foremen and proofreaders to be union members.

Foremen to have right to employ help, and to discharge for incompetency, neglect of duty, violation of office, chapel or union rules and to decrease force, persons last employed being first discharged, and reinstated in reverse order.

Disputes to be referred to an arbitration committee of five, two from each party and a fifth selected by them, decision to be final and binding on both parties.

Minimum wages: Per week—Opera-

tors on type-setting or type-casting machines, machinists, job-printers, proof-readers, January 1, 1920, to December 31, 1920, \$34; January 1, 1921 to June 30, 1921, \$35; night shifts in job rooms, \$3.00 per week above day scale.

Hours of work, seven and one-half per night, eight per day, exclusive of lunch hour in each case. On and after May, 1, 1921, seven hours per night.

Journeymen learners on typesetting or type-casting machines to be paid two-thirds of operators' scale for three months, thereafter, if judged competent, regular machine scale.

Machinist operators on type-setting or type-casting machines, not less than \$2 per week over and above foregoing scale. Operators on monotype combination machines, \$5 per week over foregoing scale. Working foremen, not less than \$5 over and above foregoing scale.

Overtime, up to 10 p.m., time and one-half; thereafter, Saturday afternoons, Sundays and holidays, double time.

Apprenticeship: Job rooms with one to three journeymen, one apprentice; and one apprentice to every two additional journeymen. No more than three apprentices in an office. No office to be entitled to an apprentice unless one journeyman other than the proprietor is regularly employed in the composing room. Last man engaged to have been employed nine months before an additional apprentice may be employed.

Apprentices to be not less than sixteen years of age; to serve five years; to be admitted as apprentice members of Union at end of second year; to be given every opportunity to learn the different trade processes; to be required to attend Technical School and I.T.U. Supplementary Trade Course; to undergo yearly examinations before local examining board on apprentices.

Minimum wages: Per week—third year, \$12; fourth year, \$15; fifth year, first 6 months, \$20; fifth year, last 6 months, \$25. No apprentice to be employed on overtime work unless proper ratio of journeymen in same office are employed on same shift.

Transportation—Electric Railways

CORNWALL, ONT.—CORNWALL STREET RAILWAY, LIGHT AND POWER COMPANY, LIMITED, AND AMALGAMATED ASSOCIATION OF STREET AND ELECTRIC RAILWAY EMPLOYEES OF AMERICA, No. 946. Agreement in effect from February 1, 1921, to August 1, 1921.

Standing of employees with the Company not to be affected by fact of membership in the Union.

Company to meet and treat through representatives with those of Union on all questions or differences arising during term of agreement.

Uniforms to be supplied by Company, one-half cost of first suit to be paid by employee.

Employees engaged in Power Houses or any department running continuously twenty-four hours per day, to work eight hours per day, three shift system, alternating each week.

Wages: Per hour—Passenger conductors and motormen, first year, 35 cents; second year, 37 cents; thereafter, 40 cents. Freight service; Motormen, 50 cents; brakemen, 37 cents. Shopmen: Master mechanics, \$135 per month; per hour, carpenters, 45 cents; general shop hand, 40 cents; pitmen, 38 cents; helpers, 35 cents; night repair men, \$85 per month. Per month, Power-house men—first six months, \$90; second six months, \$95; third six months, \$100; fourth six months, \$105. Line and meter men, per month—electricians, \$105, wire and linemen, \$105; assistant linemen, \$90; meter inspectors, \$90. Track maintenance: per hour—track foremen, 42 cents; track labourers, 37 cents. Gas Department: Per month—gas plant attendants, \$100; gas plant helpers, \$85. Miscellaneous: Park attendant, \$100 per month.

In event of cars being operated on Sundays, time and one-half to be paid.

Domestic and Personal Services (including amusements)

CALGARY, ALTA.—LOCAL THEATRES, AND INTERNATIONAL ALLIANCE OF THEATRICAL STAGE EMPLOYEES AND MOVING PICTURE MACHINE OPERATORS, No. 212. Agreement in effect from September 1, 1920 to August 31, 1921.

Employees supplied by Union to be employed.

Employees not to be asked to work in theatres where labour trouble exists.

Union members not to be discriminated against.

Extra performances to be paid as extras, and added attractions as overtime.

In combination and vaudeville theatres giving six or eight performances per week, permanent employees to be entitled to three afternoons off per week, and in theatres giving twelve performances, four mornings off a week.

When three or more entertainments are given in any one week, regular crew to be retained and paid full week's salary.

Wages: Per week—Carpenter, \$47.50; assistant carpenter, \$42.50; property man, \$45; electrician, \$45; flyman, \$42.50; grips, lamp operators, extra flymen and property clearers, \$3 per performance; overtime, per hour, \$1.25; overtime between 12 p.m. and 10 a.m., per hour, \$2. Sunday work, double time.

Employers agree to retain in their employ during life of agreement, Union operators and musicians, failure to do so to render agreement null and void.

Doubtful or obscure clauses to be interpreted by the executive board of the Union, interpretation to be final.

WAGES IN THE BUILDING TRADES IN GREAT BRITAIN IN 1914 AND 1920

THE British *Labour Gazette* for February contains an article on the rise in wages in the United Kingdom from July, 1914 to the end of 1920. The following table which appears in this

article shows the average hourly and weekly rates of wages in the large towns on August 14, 1914, and December 31, 1920, with the amount and percentage of increase for each trade.

Occupation.	Average (unweighted) of recognized rates of wages in large towns at		Increase	
	4th August, 1914	31st December, 1920	Amount	Per cent

*Where different rates are paid to banker masons and fixers respectively, the rates used are those for banker heads.

CHANGES IN WAGES AND HOURS OF LABOUR IN THE UNITED STATES

THE United States Bureau of Labour Statistics has compiled and published statistics as to rates of wages and hours of labour in the United States for some years. The February, 1920, issue of the *Monthly Labour Review* published by the Bureau contains a table of index numbers of wages per hour back to 1840, with the following explanation:

Many inquiries have been addressed to the Bureau of Labour Statistics asking for a general wage index that might be used for comparison with similar index numbers for changes in cost of living and in wholesale prices. These inquiries have generally related to changes in recent years, but frequently they ask for an index that shall compare Civil War wage changes with those during and following the late World War.

The bureau has hesitated to attempt the preparation of such a wage index because of the incomplete and disconnected material available for its construction. However, an index number has been prepared by the bureau from all sources accessible and is here presented.

A tabulation of changes in union scale of wages and hours from 1913 to 1920 in certain trades in various cities was given in the October issue of the *Monthly Labour Review*. As illustrative of the

changes the table on page 421 has been compiled from this publication to show the rates for the various trades at Buffalo, New York.

INDEX NUMBERS OF WAGES PER HOUR, 1840 TO 1920
(CURRENCY BASIS DURING CIVIL WAR PERIOD).

(1913=100)

Year	Index Number	Year	Index Number	Year	Index Number	Year	Index Number
1840...	33	1860...	39	1880...	60	1900...	73
1841...	34	1861...	40	1881...	62	1901...	74
1842...	33	1862...	41	1882...	63	1902...	77
1843...	33	1863...	44	1883...	64	1903...	80
1844...	32	1864...	50	1884...	64	1904...	80
1845...	33	1865...	58	1885...	64	1905...	82
1846...	34	1866...	61	1886...	64	1906...	85
1847...	34	1867...	63	1887...	67	1907...	89
1848...	35	1868...	65	1888...	67	1908...	89
1849...	36	1869...	66	1889...	68	1909...	90
1850...	35	1870...	67	1890...	69	1910...	93
1851...	34	1871...	68	1891...	69	1911...	95
1852...	35	1872...	69	1892...	69	1912...	97
1853...	35	1873...	69	1893...	69	1913...	100
1854...	37	1874...	67	1894...	67	1914...	102
1855...	38	1875...	67	1895...	68	1915...	103
1856...	39	1876...	64	1896...	69	1916...	111
1857...	40	1877...	61	1897...	69	1917...	128
1858...	39	1878...	60	1898...	69	1918...	162
1859...	39	1879...	59	1899...	70	1919*	*184
						1920†	†234

*This index number applies to the spring of 1919. Wage rates advanced during the year.

†This index number applies to the summer of 1920, and probably represents the wage peak of the year.

UNION SCALE OF WAGES AND HOURS OF LABOUR, FOR CERTAIN TRADES AT BUFFALO, N. Y., 1913-1920.

PRICES RETAIL AND WHOLESALE, IN CANADA, FEBRUARY, 1921

THE movement in prices continued downward, decreases again appearing in almost all lines, but especially in grain, eggs, vegetables, and textiles, with substantial decreases in lumber, livestock and meats, fish, cereals, leather, and metals. In fuel there were decreases in coke, furnace and foundry, in bituminous coal and in gasoline and coal oil.

In retail prices the average cost of a weekly budget for a family of five in sixty cities was \$14.08 at the beginning of February as compared with \$14.47 at

the beginning of January, \$15.77 in February, 1920, \$13.41 in February, 1919, and \$7.75 in February, 1914. The chief changes for the month in foods were in bacon, lard, flour, bread, rolled oats, rice, beans, prunes, and sugar. Coal, wood and coal oil averaged lower, being down in some localities.

In wholesale prices the Departmental index number was down to 270.1 for February as compared with 281.3 for January, 343.5 for February, 1920, 279.8 for February, 1919, and 136.6 for Feb-

ruary, 1914. All groups were lower than a year before except poultry, imported fresh fruits, implements, crockery and glassware, and kitchen furnishings. The only increase for the month was in raw muskrat skins. No group was down to pre-war levels except hides, although the fish group was not greatly above it.

In addition to the statistics as to retail prices of food and fuel, and as to rates for rent, the Department during the past year secured figures as to retail prices of staple lines of clothing, including footwear, from retail dealers throughout Canada, for the years 1913-1920. The figures relate to prices prevailing at the end of the year in each case but in 1920 prices during spring were also secured. From these quotations the percentages of changes in the cost of clothing have been calculated. Information was also secured as to the prices of household supplies, furniture, furnishings, etc., and an estimate has been made as to the percentage changes in the cost of miscellaneous items, the effect of the information gathered showing that such changes are approximately equal to the average changes in other items. The percentage changes in food, fuel, and rent have been calculated from the weekly budgets published in the LABOUR GAZETTE from month to month, and the accompanying table summarizes the changes from year to year by groups, the figures for each group and for all items being weighted according to the family budget method. Figures for July, 1920, were also included as the high point was reached that month, the level being 101 per cent higher than in 1913. Food fell slightly in July but the decrease was more than offset in the average by advances in fuel and in rent. During the remaining months of the year, food prices fell sufficiently to more than offset the advances in fuel and in rent, while toward the end of the year clothing fell appreciably. By December, therefore, the cost of living throughout the Dominion averaged only 92 per cent above the

level in 1913 as compared with 101 per cent in July, a fall of nine points from the peak or approximately $4\frac{1}{2}$ per cent of the cost at that date.

CHANGES IN THE COST OF LIVING IN CANADA FROM 1913 TO 1920.

(Percentages of increase in cost by groups over 1913).

*Decrease.

The table of retail prices and rentals shows the prices at the beginning of January of over one hundred staple foodstuffs, groceries, coal, wood and coal oil, and the rent for 6-roomed houses in some sixty cities throughout Canada having a population of 10,000 or over. All prices are for delivered goods. The exact quality for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city except milk and bread are the averages of quotations reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the Correspondents of the LABOUR GAZETTE.

Statistics similar to these have been published each month since the beginning of 1910, the figures being secured at the middle of each month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers who did a considerable business with workingmen's households. From 1910

to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget in the LABOUR GAZETTE was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts, with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences or with incomplete conveniences.

The weekly budget for a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, those being the items for which statistics have been obtained each month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed in similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. As market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportion of expenditure on the various foods therefore tends to be maintained. At times when the price of an article heavily weighted for this purpose rises (or falls) abnormally the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting the quantities are

estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the difference in quality. It was estimated, when the budget was first published in 1912, that these calculations represented from sixty to eighty per cent of the expenditure of an ordinary family, according to the total income. For the average family of five the expenditure on these items of food, fuel, light, and rent would be perhaps two-thirds or about sixty-five per cent of the total income. While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were designed to afford a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruit, fresh and canned vegetables, etc.; so that the comparative expenditure would be little changed.

The index number of wholesale prices is based on the quotations for 271 commodities, and is the simple average of the percentages of current prices of the several commodities in relation to the average prices for the base period, 1890-1899, these being therefore made equal to 100. The quotations for most farm products are obtained weekly and averaged for the month, the quotations for other commodities are taken for the middle of the month. The table of index numbers shows the changes by groups and sub-groups for the previous month and for the corresponding months back to 1913.

Retail Prices

Meats were slightly lower than in January in several lines, but the de-

* December only

creases were less than in the previous month except in bacon and lard. In beef and pork the prices averaged almost the same as in January. Bacon, ham, and lard were lower. Eggs were lower in nearly all of the cities. Milk was down in St. John, Cobalt, New Westminster, and Vancouver. Dairy butter was lower throughout the country, the decrease averaging 2c. per lb. Creamery butter was also lower in some of the cities but averaged almost the same as in January. Bread was lower at Halifax, St. John, Three Rivers, Thetford Mines, Brockville, Sault Ste. Marie, Trail, and Nanaimo. Soda biscuits were lower in several localities. There were some decreases in flour and in rolled oats. Corn meal, pearl barley, rice, tapioca were down. Canned tomatoes, peas, and corn, dried beans and onions averaged lower. Potatoes were lower in all the provinces except Manitoba and Alberta. Prunes and raisins were cheaper. There were considerable decreases in jams and in marmalade, and canned fruits averaged lower. Sugar showed slight decreases. Anthracite coal averaged nearly 30c. per ton lower, while bituminous coal averaged 11c. per ton lower. Hard wood, however, averaged higher. Rent was practically unchanged, but increases to take effect in the spring were reported in a number of localities.

Wholesale Prices

GRAINS AND FODDER.—Wheat, Manitoba Northern No. 1, had fallen to \$1.80 per bushel at Winnipeg by the beginning of February, but rose to \$1.97 in the following week receding to \$1.91 at the end of the month. Ontario winter wheat No. 2. fell to \$1.80-1.85 the first week, rose 10c. the following week, but fell 5c. the next week. Barley was down to 80c. per bushel at the beginning of the month, rose to 86c., and fell to 78c. at Winnipeg. Ontario barley at Toronto fell from 90-95c. to 80-85c. Oats fell to 46c. per bushel at Winnipeg but re-

covered to 50c. Corn had fallen to 88c. per bushel at Toronto but rose to 95c. Flaxseed fell to \$1.75 per bushel but rose to \$1.89, falling later to \$1.78. Peas fell to \$1.50-1.60 and rye to \$1.50-1.55. Hay was down to \$25.00 per ton at Montreal and Toronto. Baled straw was lower, at \$12.00-13.50 per ton. Bran was down to \$45.00 per ton and shorts to 38.00 at Toronto.

ANIMALS AND MEATS.—Cattle at Winnipeg had fallen to \$7.00-8.00 per hundred pounds at the end of January, but rose each week during February to \$8.00-8.75 in the last week. Cattle at Toronto had fallen to \$8.50-9.50 at the end of January and continued on the lower level. Beef continued at the lower level at 16-22c. per pound for hind-quarters in effect at the end of January. Hogs were down to \$14.00-14.25 per hundred pounds at Toronto at the beginning of February but fell each week to \$12.75-13.00 at the end of the month. Breakfast bacon fell from 43c to 40c. Lard fell from 23c. to 20c. Sheep rose from \$7.00 to \$8.00 per hundred pounds. Turkeys rose from 60c. per lb. to 62c. at Montreal.

DAIRY PRODUCTS.—Butter fell from 55c. per pound to 53c. Cheese rose from 28c. to 30c. per pound. Eggs fell from 75c. per dozen to 50c.

FISH.—Dried cod was 1c. lower at 7c. per pound. Canned lobsters fell from 35c. to 30c. per pound. Salt mackerel declined from 9c. to 8c. and fresh whitefish from 15c. to 14c. per pound.

FRUITS AND VEGETABLES.—Lemons were firmer at \$4.75 per box and oranges at \$4.50-6.50. Currants were lower at 18c. per pound and medium sized prunes at 12c. Potatoes were down to \$1.05-1.20

(*) Preliminary figures. (†) Nine commodities off the market, fruits, vegetables, etc. One line of spelter was dropped in 1915.

at Toronto in small lots and at Montreal were down to 95c.-\$1.00 in car lots. Beans were lower at \$3.00 per bushel and onions at \$1.50 per bag. Rolled oats were easier at \$3.50 per bag. Rangoon rice was lower at 8c. per pound. Flour was down to \$10.70 per barrel at Toronto for spring wheat patents. Molasses was lower at 88c. per gallon. Sugar was steady. Honey was lower at 22½c. per pound.

TEXTILES.—Yarn was lower at \$1.00 per pound. Beaver cloth fell from \$5.50 to \$4.75 per yard. Raw cotton at New York was down to 14c. per pound. Woven cotton fabrics averaged slightly lower than the level to which prices fell in January. Raw silk was down to \$6.20 per pound. Jute eased off from 11.23c. per pound to 9.76c. Flax fibre fell from 70c. per pound to 50c. and tow from 16c. to 14c.

HIDES, LEATHER, BOOTS AND SHOES.—Hides continued at the lower level reached at the end of 1920. Leather continued to decline, Spanish sides were down from 73c. to 64c. oak sides from 76c. to 67c., and waxed uppers from 48c. to 40c.

METALS AND IMPLEMENTS.—Pig iron fell from \$46.30 per ton to \$41.80. Steel bar was down from \$4.55 to \$4.20 per hundred pounds. Black sheets fell from \$8.45 to \$6.75 per box and galvanized sheets were down from \$8.90 to \$8.35. Copper was lower at 18c. per pound and lead at 7c. Nickle fell from 43c. per pound to 41c. at New York. Silver was down to 59½c. per ounce. Tin was down to 43c. per pound.

FUEL AND LIGHTING.—Connellsville furnace coke was down from \$7.00 per

ton to \$5.00 at the ovens. Bituminous coal was lower at the mines. Gasoline was down from 42c. to 38c. per gallon. Coal oil was 1c. per gallon lower at 27c.

BUILDING MATERIALS.—Spruce deals at St. John, N.B., fell from \$34.00 per M to \$32.00. Lath at Toronto fell from \$15.00 per M to \$14.00. Oak was \$5.00 lower at \$130.00 per M. Birch fell from \$105.00 to \$85.00 and hard maple from \$80.00 to \$70.00. British Columbia fir at Winnipeg was down from \$38.50 per M to \$36.00. Rough lumber was down at Victoria, B.C. from \$20.00 to \$18.00 per M. British Columbia shingles fell from \$5.25 per M to \$4.70 at Winnipeg. Building paper fell from \$1.65 per roll to \$1.25 for plain fibre. Lead pipe was ½c. lower at 13½c. per pound. Wire nails were down from \$5.90 to \$5.25. Sash cord was 10c. per pound lower at 58c. Linseed oil, turpentine, benzine, and shellac were lower. Prepared paints fell from \$5.05 per gallon to \$4.45. Window glass was down from \$13.33 per box to \$12.27.

HOUSE FURNISHINGS.—Following the ten per cent cut in several lines of furniture in January no further changes were reported.

DRUGS AND CHEMICALS.—Alcohol was down from \$12.50 per gallon to \$11.50. Bleaching powder fell from 6½c. to 4¼c. per pound.

MISCELLANEOUS.—In raw furs muskrat skins rose from 75c. to \$1.35 each. Malt fell from \$1.40 per bushel to \$1.30. Pulp and paper markets continued easier, ground wood pulp being quoted as low as \$65.00-75.00 per ton as compared with \$130.00-160.00 in October and \$55.00-65.00 in February, 1920. Bleached

sulphite pulp was down to \$140.00 as compared with \$240.00 in October and \$130.00 in February, 1920. Manila rope was down to 24½c. per pound as compared with 35c. in March, 1920. Crude rubber, Para, island, fine, was down to

16½c. per pound as compared with 17c. in January, 42c. in February, 1920, and 66c. in February, 1914. Laundry starch fell to 8½c. per pound as compared with 9c. in January and 10c. in February, 1920.

PRICES IN THE UNITED KINGDOM AND IN OTHER COUNTRIES

THE accompanying tables and the following notes show the movements in prices in other countries as compared with the movement in Canada. It will be observed that in some countries the increases in both wholesale prices and retail prices of food have been much greater than in others, especially where currency conditions have considerably changed since 1914, when almost every country was on a gold basis.

United Kingdom

In Great Britain there was a fall in the prices of food in January, the level on the first of February being 163 per cent higher than in July, 1914, whereas the month before the level was up 195 per cent. The chief decreases were in bread, flour, sugar, potatoes, butter, margarine, and eggs. Bread was down ½d per 4 pound loaf and bacon was down 2¾d. per pound. British meats averaged slightly higher than at the first of January. A decline in the prices of clothing also appeared, the cost in February being calculated to be 250 to 260 per cent higher than in July, 1914, whereas in January prices were found to be 290 per cent higher. Gas, coal oil, lamp oil, and candles were up, so that the average increase in the cost of fuel was up 140 per cent since July, 1914. Miscellaneous items were up 151 per

cent but on the first of January the level had been still higher at 165 per cent. The cost of all items at the first of February was, therefore, found to be only 151 per cent higher than in July, 1914, as compared with a level 163 per cent higher on the first of January.

France

The statistical office reported that the level of retail prices of food, fuel, and light in Paris in January was 3.4 per cent lower than in December, 1920, but was still 310 per cent higher than in July, 1914. Wholesale prices in February, 1921 were 376 per cent higher than in 1913, but in January they were 407 per cent higher and in December 435 per cent.

Italy

The Municipal Labour Office at Rome reported the general level of food prices in January to be 2 per cent lower than in the previous month but still 267 per cent higher than in July, 1914. Including all items of expenditure in the calculation it was found that the cost of living was 274 per cent higher than 1914. The Municipal Labour Office at Milan reported the cost of maintaining a family to be 471 per cent higher than in 1914, the month showing an increase of 6.9 per cent over the preceding

month. Foods showed an increase of 7 per cent for the month. The Municipal Labour Office at Florence reported its index number showing the changes in the weekly expenditure in food to be 2 per cent higher in January, 1921, than a month before and 392 per cent higher than in 1914, all items of family expenditure being 354 per cent higher.

Germany

The Municipal Bureau of Statistics for Berlin has reported the minimum weekly cost of sustenance in December, 1920, for a man, wife, and two children to be 330 marks, which was 14 marks higher than in November. In June, 1914, the cost of the same items would have been only 29 marks. On wholesale prices the Frankfurter Zeitung has published index numbers for each month in 1920 and for January and February, 1921. The group index number for food in 1921 was given at 144 as compared with 177 in December, 1920, 119 in February, 1920, and 11.38 in 1914. The index number for textiles and leather in February was 89 as compared with 165 in March, 1920, and 100 in January, 1920, and 2.92 in 1914. The index number for minerals was 113 for February, 1921, as compared with 163 in March, 1920, 100 in January, 1920, and 7.15 in 1914. The index number for all 70 articles included in February, 1921, was 136 as compared with 159 in January, 1921, 135 in June, 1920, 157 in May, 1920, and 100 in January, 1920, and 9.3 in 1914.

Belgium

The Labour Office for Belgium reported the level of retail prices of foods and other necessities on December 15, 1920, showed a decrease of 1.7 per cent

as compared with November 15 but an increase of 368 per cent over April, 1914, averages for 59 localities being used. Averages for the 12 principal cities showed an increase of 369 per cent over pre-war prices, food being up 383 per cent, clothing, fuel, and light 365 per cent, and other items 323 per cent.

Denmark

The Statistical Department has published index numbers showing the increase in the cost of food, clothing, rent, fuel, and other items for a family, prices in July, 1914, being equal to 100. For January, 1921, this index number was 264 as compared with 262 in July, 1920. The index number for food was 276 as compared with 253 in July. The index number for clothing was 292 as compared with 355 in July and for rent 130 as compared with 153 in July.

Japan

The United States Department of Labour has secured statistics as to the cost of living in Tokyo in 1919 as compared with 1914 and 1909. Information as to some clerical workers as well as workingmen's families was included. The calculation showed that in 1914 the cost of living was 10 per cent higher than in 1909, and in 1919, 220 per cent higher than in 1909.

United States

The various numbers of wholesale prices calculated by the Department of Labour, by the Federal Reserve Board and for various journals have shown continuous decreases since the spring of 1920. At the first of March, *Dun's Review* reported a smaller increase dur-

ing the month of February than had occurred for some months, indicating that the tendency to fall was not so strong. There was some recovery in breadstuffs and in meats. Dun's index number indicated that wholesale prices were still 50 per cent higher than in 1914 and 53 per cent higher than for the five years prior to 1914.

In the February issue of the *Monthly Labour Review* the United States Bureau of Statistics published the accompanying table as its semi-annual statement as to changes in the cost of living by groups in the large industrial cities. This table shows the level in June was 116.5 per cent higher than in 1913, but was only 100.4 per cent higher by December. The decline was in Food, Clothing and Furniture and Furnishings, substantial increases appearing in

Housing and in Fuel with a slight increase in the miscellaneous group. The average decrease for the six months was therefore 16 points or almost 8 per cent of the cost in June.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING 1920

WHILE the following tables of fatal industrial accidents occurring in Canada during 1920 have been made as complete as possible, it should be understood that they do not necessarily include all the industrial accidents which may have occurred during the year. In addition to reports from the various correspondents of the Department, reports have been received from the following sources: for Canada, the Board of Railway Commissioners; for Nova Scotia, the Workmen's Compensation Board, and the Department of Public Works and Mines; for New Brunswick, the Workmen's Compensation Board; for Quebec, the Department of Public Works and Labour, and the Bureau of Mines; for Ontario, the Factories Inspector, the Workmen's Compensation Board, the Ontario Railway and Municipal Board, the Algoma Central and Hudson's Bay Railway, the Algoma

Steel Corporation, Limited, and the Lake Superior Paper Company; for Manitoba, the Bureau of Labour, and the Workmen's Compensation Board; for Saskatchewan, the Bureau of Labour; for Alberta, the Workmen's Compensation Board; and for British Columbia, the Department of Mines, and the Workmen's Compensation Board.

According to the record, 1,170 fatal industrial accidents occurred during 1920 as compared with 1,068 in 1919, an increase of 9.6 per cent. The lumbering industry had the highest number of fatalities amounting to 16 per cent of the total, or 187 accidents; British Columbia showed the highest number of any province with 75 reported. (For an article dealing with the hazards of the lumbering industry in British Columbia, see LABOUR GAZETTE, August 1920). In this industry the falling of trees, branches, etc. caused the greatest

number of deaths, 60 being reported. The steam railway group was responsible for 15.3 per cent of the fatalities, or 178, of which 79 occurred in the province of Ontario; 86 of the fatalities were due to being struck by, run over, or crushed by or between car and engine. In mining and quarrying, the rate of 13.7 per cent, or a total of 160, represents the fatalities for this industry, of which 37 were reported for Nova Scotia; 53 of the accidents were due to "falling objects," rock, stone, etc., and 37 were caused by mine and quarry cars. In the industries as a whole 274 fatalities were due to moving trains and other vehicles, 190 were due to "falling objects," 143 to falls of persons, and 135 to dangerous substances. Fuller particulars regarding the causes will be found in the quarterly statements published in the issues of the LABOUR GAZETTE for May, August, and November, 1920, and February 1921. Two accidents are included

which occurred in December and which had not been previously reported. A bushman at Eagle River, Ont., was struck by a tree and killed on December 27, and on December 29 a finisher in a welding company, at Toronto, cut his thumb and died from infection.

An analysis of the monthly distribution of accidents shows the highest number of accidents as occurring in March, but in the quarter including the months of July, August and September 16 more accidents were reported than in the first quarter. The distribution by provinces shows Ontario with the highest record, there being 452 fatalities, and British Columbia coming next with 223 fatalities.

The accompanying tables give by months the fatalities in the various industrial groups, the causes, and the accidents by provinces with comparisons for 1919.

FATAL INDUSTRIAL ACCIDENTS DURING 1920, BY MONTHS.

RECENT LEGAL DECISIONS AFFECTING LABOUR

The three legal decisions summarized below have reference to an action for damages for personal injuries in compensation in Alberta and in New York state.

below have reference to an action for damages for personal injuries in compensation in Alberta and in New York state.

Injured workman may sue a fellow employee for negligence after receiving compensation from Board, but amount of damages must go to Board

A carpenter working on a building was struck by a tool thrown down from an upper part of the structure by a fellow employee, and badly injured. He filed a claim with the Workmen's Compensation Board of Ontario, and received full compensation. He then brought action for damages for personal injuries against the workman who had thrown down the tool, on the ground of negligence. The defendant denied negligence stating that following the usual practice in the building he had thrown down the tool after calling out a warning. He made the further plea that Section 9 of the Workmen's Compensation Act barred an injured person from setting up any further claim if he had elected to claim compensation from the Board or from his employer.

It was held by the Court that whatever the practice or the orders of a superior might be, it must be negligence to throw a heavy tool from a height of 40 feet when there is the slightest risk

of hitting some one. Merely shouting "watch out below" in a perfunctory way, and then throwing down the tool, without first being sure that every man to whom the warning is being given has heard the warning and is in a position of safety, cannot be sufficient. With regard to the plea that the plaintiff was barred from setting up any further claim after claiming compensation from the Board, the Court stated that counsel for the plaintiff conceded that the Board was entitled to the benefit of any judgment which the plaintiff might recover, and that any moneys payable thereunder should be payable to the Board. Judgment was therefore given in favour of the plaintiff for \$1,000 damages with costs with a declaration that the judgment shall enure to the Workmen's Compensation Board, the moneys payable being used first in recouping the Board for the sums already paid for compensation and medical services, and the surplus to be applied as the Act directs. (*Ontario—McIver vs. Tammi*)

Compensation allowed workman even if accident due to his own negligence, if not serious and wilful misconduct

A switchman when coupling cars found that the draw bar was not operating properly, and stepping between the cars he tried to adjust the parts with his foot contrary to the rules of the Company employing him. He slipped and his foot was crushed, the injury resulting in a permanent disablement. He applied for compensation under the Workmen's Compensation Act of Al-

berta but his application was rejected by the arbitrator on the ground that in using his foot in this way he was knowingly breaking the rules of his employer and that in consequence he was not acting within the sphere of his employment. He appealed from the dismissal of his application, and the case was heard by the Appellate Division of the Supreme Court of Alberta.

In its decision the Court stated, that the conclusions of fact reached by the arbitrator were binding on the Court. The question, however, whether on the established facts the accident arose out of and in the course of the employment was one involving matters of law with which the Court had power to deal. The term "an accident happening or arising in the course of employment" was interpreted by the Court to mean simply "happening or occurring while the man was proceeding generally about his master's affairs and not off duty entirely and so going about his own

business exclusively. According to this interpretation the accident was held to have occurred in the course of the plaintiff's employment. Even if the accident was due to his own negligence and disobedience this would not destroy his rights to compensation unless in the opinion of the Court such negligence or disobedience had reached such a degree as to come properly within the category of "serious and wilful misconduct."

The appeal was therefore allowed with costs and the case was referred again to the arbitrator for the fixing of compensation. (*Alberta—Morreau vs. Grand Trunk Pacific Railway*)

Compensation allowed in New York State for injury due to careless act of fellow employee

A factory employee in New York State was struck in the eye by an apple which a fellow employee had thrown in sport at another, and his sight was almost destroyed. The State Commission awarded him a benefit. An appeal was made against the award of the Commission in the appellate division of the State Supreme Court, but the award of the Commission was sustained. On a further appeal being taken the Court of Appeals sustained the judgment of the lower court on the grounds that "the claimant's presence in a factory in association with other workmen involved exposure to the risk of injury from the careless acts of those about

him.....Whatever men and boys will do, when gathered together under such surroundings, at all events if it is something reasonably to be expected, was one of the perils of his service.....The claimant was injured, not merely while he was in a factory, but because he was in a factory, in touch with the association and conditions inseparable from factory life.....The test of liability under the statute is not the master's dereliction, whether his own or that of his representatives acting within the scope of their authority. The test of liability is the relation of the service to the injury, of the employment to the risk." (*New York State—Leonbruno vs. Champlain Silk Mills*)

Wages and Hours of Labour in Canada, 1901-1920

Tables showing changes in Rates of Wages and Hours of Labour in various classes of employment

THE present bulletin comprises tables of rates of wages and hours of labour of various classes of employment in Canada. These tables have been compiled in the Department of Labour from returns received from various sources, and are published in the belief that the facts presented will be of interest and service to employers and workers, and to the public in general. The main object of the tables is to indicate the changes in wage rates which have occurred over the period under review. The occupations listed in the bulletin do not cover the entire field of industry, but the particular trades selected are typical of a sufficiently wide range of employment to make their publication of value.

The tables numbered I to V, which comprise the main part of this bulletin, show the rates of wages and the hours of labour in thirteen cities of Canada for a number of occupations, commencing with the year 1901 and ending with the year 1920. As far as possible the rates quoted for each year are those in effect during September, which in general reflect conditions up to the end of the year, although, of course, in some cases, changes would occur which would not be indicated.

Table I deals with seven building trades: viz., Bricklayers, Carpenter, Electrical Workers, Painters, Plumbers, Stonecutters and Builders' Labourers, selected as indicating the movements in wages and hours in the building industry during the period under review. The information for this table was obtained by Departmental officers and correspondents, and from copies of signed agreements and returns from trade union officials and employers.

Table II contains the figures for five metal trades: Blacksmiths, Boilermakers, Iron Moulders, Machinists and Sheet Metal Workers, selected as representative of this group of trades employed in industrial establishments. Statistics as to rates for railway shop employees are not included. The sources of information are similar to those used for the building trades. In many cases wide ranges in the rates were found in the metal trades, and in such instances, keeping in mind that the main object of the table was to show the movements in wages and hours, the record of rates was selected which showed most continuity.

In Table III two classes have been taken to represent the printing trades: namely, Newspaper Hand Compositors on day work, and Job Office Cylinder Pressmen. All of the sources mentioned above have been used in this table, but it is largely based on copies of signed agreements and returns from trade union officials. In some cases the wages fixed by agreement have been sup-

plemented by a bonus, and the amount of the bonus is included in the figures listed.

Table IV contains figures for Street Railway Conductors and Motormen, classes which comprise a very large majority of street railway employees. The rates paid vary in nearly all instances according to the term of service, but the maximum rates have been listed, as these usually affect the largest number of men.

Table V gives statistics for Freight Conductors, Freight Brakemen, Freight Locomotive Engineers, Freight Locomotive Firemen, Telegraphers and Sectionmen, as representative of steam railway operating employees. For the first four of these classes the figures show the rates per mile or the minimum daily rates, as explained in the footnote. The figures for this group are those of one of the large Canadian railways, and are obtained from the schedules of rates, etc..

In addition to these statements, a Supplementary Table is given for the purpose of illustrating by samples the movements of rates of wages and hours of labour from 1911 to 1920 in various branches of factory employment and in the lumbering industry. Each sample shows the rates paid by some particular employer from year to year.

The first set of samples, VI (a), is for common labour in various classes of factories. The locality is given in each instance, but the return being confidential, the nature of the industry is omitted.

The second set, VI (b), comprises sample rates for miscellaneous factory trades. The tables show the trade and the industry concerned and the province in which the factory is situated.

The samples in the third set are for the lumbering industry, and exemplify the trend of rates for one class of workers in the bush and three classes in the sawmill.

Index Numbers of Wage Rates

In order to show the general trend of the movement in wages in Tables I to V, index numbers have been computed. For each series of rates, that is, for each trade or occupation in each locality, index numbers have been calculated both from the hourly rates and from the weekly rates, and these index numbers have been averaged by groups for all the localities, thus indicating the percentage of change in weekly rates and in hourly rates for each group. The year 1913 was taken as the base year, that is, the rate for 1913 in each case was taken as 100, so that the index numbers show the percentage of change prior to and since that date. An average was also made for all of the series in these tables, in order to indicate the general trend in wages in such trades as a whole. In making the average index numbers the simple arithmetical averages were taken.

Similarly index numbers have been calculated for the three sets of sample rates in the supplementary tables.

INDEX NUMBERS OF RATES OF WAGES FOR 21 CLASSES IN 13 CITIES OF CANADA, 1921-1920.

*Members of crews on freight trains are paid at a rate per mile, 100 miles (or less), or 8 hours (or less), as the standard for a day's work with provision for overtime at one and one half times the regular rate. Prior to January 1st., 1918, the standard day was on the basis of 10 hours instead of 8 with regular rates for overtime.

†Until 1916 west of Fort William, and 1919 east of Fort William, Engineers and Firemen were paid according to type of engine; figures given are for engines "125 per cent and over" as an average size. From those dates rates of pay were according to weights of engines on drivers.

INDUSTRIAL RELATIONS SERIES

Report of a Conference on Industrial Relations

HELD AT OTTAWA

FEBRUARY 21st and 22nd, 1921

Issued as a Supplement to the LABOUR GAZETTE

MARCH, 1921

PRINTED BY THOMAS MULVEY, PRINTER TO THE KING'S MOST
EXCELLENT MAJESTY
OTTAWA

INTRODUCTION

The present bulletin comprises a report of the proceedings of a Conference on the subject of Industrial Relations which was held in the Parliament Buildings, Ottawa, on February 21-22, 1921. This Conference was called by Senator the Honourable G. D. Robertson, Minister of Labour, and was attended by representatives of a number of the larger employing companies in Canada which have established Joint Councils with their employees. The spokesmen for the respective employers were for the most part company officers in charge of industrial relations. The addresses dealt in the main with the experience of Industrial Councils which had already been gained by these companies. Two of the companies represented at the Conference have not yet established Joint Councils but are understood to have the subject under consideration. In addition to the delegates from the various Canadian companies in attendance at the Conference, Mr. A. H. Young, of Chicago, Manager of Industrial Relations of the International Harvester Company, and Mr. Cyrus Ching, of New York, Supervisor of Industrial Relations of the United States Rubber Company, were also present by invitation and participated in the proceedings of the Conference.

The present report of the proceedings is published in the belief that the information presented will be of interest and service to other employers and also to employees.

The following were in attendance at the Conference: Senator the Honourable G. D. Robertson, Minister of Labour, Mr. F. A. Acland, Deputy Minister of Labour; Mr. Gerald H. Brown, Assistant Deputy Minister of Labour, (Chairman); Messrs. Harry Hereford, Industrial Engineer; E. McG. Quirk, T. A. Stevenson, and F. E. Harrison, of the Department of Labour; Mr. A. H. Young, Manager of Industrial Relations, International Harvester Company, Chicago; Mr. Cyrus Ching, Supervisor of Industrial Relations, United States Rubber Company, New York; Mr. J. H. Coffey, Jr., Factory Manager, Gutta-Percha and Rubber, Limited, Toronto; Mr. F. L. Riggs, Supervisor of Industrial Relations, Gutta-Percha and Rubber, Limited, Toronto; Mr. P. F. Sinclair, in Charge of Industrial Relations, Imperial Oil, Limited, Toronto; Mr. G. L. Thompson, Imperial Oil, Limited, Toronto; Mr. F. J. Gernandt, General Superintendent, International Harvester Company of Canada, Limited, Hamilton; Mr. F. T. Day, Secretary, Works' Council, International Harvester Company of Canada, Limited, Hamilton; Mr. H. H. Stedman, Superintendent, Swift Canadian Company, Toronto; Mr. R. M. Olzendam, Secretary, Department of Industrial Relations, Spanish River Pulp and Paper Mills, Ltd., Sault Ste. Marie; Mr. George Valentine, Assistant General Manager, Massey-Harris Company, Limited, Toronto; Mr. Wills MacLachlan, Consulting

Engineer, Toronto; Mr. Wm. M. Gray, Vice-President and Assistant Manager, Gray-Dort Motors, Ltd., Chatham; Mr. John H. Frye, in Charge of Industrial Relations, Canadian Consolidated Rubber Company, Limited, Montreal; Mr. J. D. Jones, General Manager, Algoma Steel Corporation, Sault Ste. Marie; Mr. Frank J. McGue, Superintendent of Industrial Services Department, Algoma Steel Corporation, Sault Ste. Marie; Mr. W. H. Winter, General Superintendent of Plant, Bell Telephone Company of Canada, Montreal; Mr. E. Blake Robertson, Secretary, Canadian Manufacturers' Association, Ottawa; Mr. J. Clarke Reilly, Secretary, Association of Canadian Building and Construction Industries, Ottawa.

Report of Conference on Industrial Relations

Introductory Address by the Minister of Labour

Gentlemen, may I express my very deep appreciation of the trouble you have taken and the kindness you have displayed in accepting the invitation of the Department of Labour. I shall not make any extended remarks. I shall simply outline briefly what prompted us to extend the invitation to you to come here to confer with the officials of the Department of Labour.

The idea or desire of promoting more harmonious relations between employers and their workmen is not new in Canada or in many other countries; but during the period of the late war I think it became apparent to every one that it was absolutely imperative to the success of the undertaking in which the allied countries were engaged at that time, that special efforts should be made along this line. I know that early in 1918 this question first began to receive special consideration at the hands of the Canadian Government, and during that year some substantial progress was made in the way of at least laying the foundation for better relations and a better understanding between employers and workmen.

My observations and experience indicate most clearly that unless there is confidence between the two groups it is difficult if not impossible for an industry to succeed as it should and would succeed if that confidence existed. Modern industry, I think, to a very great extent realizes this, and as a result of keen observation and keen business foresight many employers of labour have come to the conclusion that this line of action is desirable from the standpoint of all concerned and is mutually beneficial.

In 1919, the Government of Canada appointed a Royal Commission on Industrial Relations, of which Chief Justice Mathers of Winnipeg was made Chairman. That Commission travelled throughout the entire country, and gave an opportunity to every person and every interest, whether they represented capital or labour or the consuming public, to come before them and express their views on industrial questions. One of the recommendations of that Commission was the promotion and encouragement of the establishment of joint industrial councils, with a view to promoting harmony and better relations between employers and employees.

In 1919, in keeping with one of the recommendations made by the Commission, a conference was called at Ottawa which was attended by some 200 gentlemen representing employers and workmen and the different provincial governments, municipalities, and so on. Some five days were spent, I think profitably, in discussing a number of important problems, such as the eight-hour day, unemployment insurance, industrial councils, and other subjects with which you are probably familiar. It was the general opinion of both the employers and the representatives of labour who attended that meeting that the conference had been useful, and they expressed the hope that it might be held annually. In 1920, as the fall approached, there were reasons why it did not seem possible to have another such conference: one was that, because of the turn in the tide, prices were beginning to drop, a business depression having set in, and a good many employers were feeling the stress and pressure of the changed conditions, and, on the other hand, labour was perhaps inclined to look forward with a great deal of apprehension to what was going to occur in the immediate future. So it was felt by some that perhaps it was not an opportune time for the holding of another con-

ference. Notwithstanding this, opinion was divided, and the policy of the Department being not to attempt to force its views or its desires upon anybody, but to attempt to be useful, to give if possible in promoting a plan that might be mutually advantageous and acceptable to those directly interested, and instead of calling a general conference such as might perhaps have resulted in some controversial discussion, which would seem to be undesirable or would perhaps shake that feeling of confidence and mutual respect that was so well established at our 1919 meeting, and still desiring to make progress along the lines of promoting goodwill between the workmen and their employers, we conceived the idea of calling together representatives of those industries which had taken a sufficiently deep interest in this most important question to personally and individually establish some form of industrial council within their own industries.

We are not unselfish in extending this invitation to you, and I may frankly tell you why: the Department of Labour has had no great experience in the past, and therefore does not feel that it or its officials can be regarded as final authorities upon the best methods of procedure or the most acceptable form of industrial council in any industry. The Department in the person of the Assistant Deputy Minister, Mr. Gerald H. Brown, has given special attention to the subject and Mr. E. McG. Quirk, of Montreal, who was an employer of labour for many years and has given evidence of being a broad, fair-minded, progressive man, together with Mr. T. A. Stevenson of Toronto, who has been a progressive labour leader for a number of years and who, during the war period, rendered valuable service to the Department of Soldiers' Civil Re-establishment, have been delegated to act as the Department's travelling representatives to give information to employers and to labour people throughout the country concerning Joint Industrial Councils.

These two gentlemen, while familiar with labour problems generally, have not had any great experience as yet in connection with this particular matter; therefore, we felt it would be useful to them and to the Department—and we hoped useful to you, gentlemen—to bring you together, so that the officials of the Department might get the benefit of your experience. In addition, the Department has an efficiency engineer of wide industrial experience in the person of Mr. Hereford. He has given special attention to this subject and has given assistance in connection with its problems.

I think, perhaps, I have outlined the purpose of our extending the invitation to you to be here to-day. I am hopeful that as a result of your deliberations, as a result of the expressions of experiences and views which you severally and collectively entertain, that all of you, as well as the officials of the Department, will feel that it has been profitable for us to have a conference of this sort. I think the missionary work, along proper, logical, sane lines, which can follow a meeting of this sort, will create an interest in the minds of many other large employers of labour in Canada in this subject, by reason of their coming in contact with you gentlemen, and when they realize that the firms with which you are employed deem it of sufficient importance to give it attention, it will set moving in their minds the advisability of taking a more active interest in the problem than they may have done up to the present time.

In addition to having their Canadian representative with us, we are especially favoured to-day in that Mr. Young, of the International Harvester Company, has come all the way from Chicago, to attend this conference; and I am sure the work which that enormous concern has been carrying on in the United States, as well as the information which Mr. Young has gained from the observation and experience of the operations of other large firms in that country, will be of great interest to us all. We are indebted to Mr. Young and to the International Harvester Company for sending him here.

It is not my purpose to take up your time at any great length. Mr. Brown, the Assistant Deputy Minister, has prepared some line of procedure as to the questions that it may be proper to bring before the meeting. We shall be glad to have you continue your session so long as you think it useful, and the officials of the Department of Labour will co-operate with you during your stay, and I certainly shall be here as much of my time as possible, because I appreciate your coming and want to gain the full advantage of all the information which it is possible to obtain from you.

Before sitting down, may I make one observation. I do not do it by way of any desire to create alarm, but we cannot shut our eyes to the fact that during the last few years in particular, there has been a growing sentiment among the wage-earners in all countries which is not conducive to harmonious relations with employers, nor to confidence on the part of the owners and investors of capital. When we look back over the last 40 or 50 years we see the spasmodic attempts that have been made in various parts of the world by revolutions or by the use of force, to confiscate property and take charge of industry. Heretofore, it has never been regarded seriously or as being a world menace; but to-day, as never before, there is an organized, world-wide effort, to bring into existence a situation such as has been the dream of some of our socialist theorists for years gone by. The socialist theory, as enunciated by Karl Marx, has, however, proved too slow a way of bringing about the millenium, and therefore within the past two years there has been set up what is known as the Third International, an organization which proposes by force of arms to destroy capital as rapidly as circumstances will permit. They think that before that can be done the international trade union movement throughout the world, which has for its object co-operation between the workman and the employer, must be destroyed.

I have at my office a volume which gives in detail the proceedings of the Second International Conference of the Communists which was held in Petrograd during July and August last, and which probably will become a public document before long. When it does so, the people of this country will realize very forcibly, that throughout this country, in many of our industrial centres to-day, the missionaries of that movement are carrying on their propaganda and are attempting in every way possible to discredit our existing institutions, industrial, political, and religious. There never was a time in the history of this country, in my humble opinion, when it was so necessary as now that the sane thinking, patriotic citizens of this country—either employers, or workmen, or anyone else—should see to it that nothing irrational and foolish occurs, but rather that in the interest of Canada itself as well as in the interest of the individual and of industries, we should seek to promote and inspire confidence instead of destroying it.

I am sure that you gentlemen who are giving your services to promote better relations between capital and labour have probably seen, even more clearly than I, the importance of what I have briefly tried to convey to you. I hope as a result of our meeting here that there may come a greater growth of confidence between the interests of capital, so-called, or those who have money invested in industry, and those who invest their services, because without both, neither can prosper.

I shall be glad now to receive suggestions or nominations for Chairman of your meeting during the session here.

It was moved by Mr. Young, seconded by Mr. Olzendam, that Mr. Brown take the Chair.

(THE MINISTER CONTINUING): I wonder, gentlemen, if we might not with profit spend this morning's session in a general discussion, assuming that at least one gentleman from each of the industries represented will briefly outline his experience and observation of the industry that he represents?

I think that information, as far as you feel free to give it, would be of very great interest to all of us. If there is no objection to that proposal, inasmuch as Mr. Young represents a very large industry, an industry that is an important one in Canada as well as in the United States, I am sure we would all be deeply interested in hearing from him as to the experience of the International Harvester Company and the success or otherwise which has accompanied their efforts in industrial council activities.

**Address of Mr. A. H. Young, Manager of Industrial Relations,
International Harvester Co., Chicago.**

Mr Chairman and gentlemen, in the first place, I think I express the unanimous sentiment of the group here when I say it was a very fortunate circumstance that delayed the conference from the fall of 1920 to the present date, if by that delay we are gaining your presence. As I listened to your statement I thought how fortunate Canada was to have as the director of her labour portfolio a man who has come from the ranks and who has just such a common horse sense view of things as you have. I am reminded of Cyrus Ching's definition of horse sense, which he says, after all, is "stable thinking."

The International Harvester industrial council plan will be two years old on March 12th next. The basis of it is a works council at each of the plants. The works council is composed of a number of elected employee representatives and a not greater number of selected management representatives. The plant was arbitrarily divided into geographical districts so that the various crafts and shops might be represented. An arbitrary basis of representation was adopted—one representative for each two to three hundred employees in the district. The reason for such an arbitrary arrangement was that two of our largest plants employ nearly 6,000 men and would have about 25 representatives, and when we considered the addition of an equal number of management representatives it was thought that a greater number than that would be unwieldy. At Chatham where we have only 200 employees, our ratio is much less than that, but in no plant are there less than five representatives.

Employee representatives must have had one year's continuous Company service; they must be at least twenty-one years old and citizens of the country; no employee having the power to hire or discharge is eligible; all employees below the grade of assistant foremen have the right to vote, irrespective of length of employment, citizenship, age or sex. The management group cannot be greater in number than the group of employee representatives. The chairman is the manager of industrial relations, or someone appointed by him. A secretary is appointed by the superintendent. Neither of these officers has more than a parliamentary function in the council.

The function of the works council is to shape the Company's policy in all matters of mutual interest—wages, hours, and matters which are regarded as controversial, as well as non-controversial subjects. It votes on the unit ballot plan, safeguarding the fifty-fifty arrangement for which the council stands. A majority of the employee representatives determine their action as a whole, and they cast a single ballot for that side. A majority of the management representatives determine their action as a whole, and they cast a single ballot for that side, thus no one has the power of casting a deciding ballot in such a case. This is a guarantee of absolute equality.

After the council agrees, its recommendations are forwarded to the superintendent for execution. The execution lies wholly with the management, but if the manner of execution is open to question, then the matter goes again to the works council, so you will see that it has both a legislative and judicial function.

There has never been any misunderstanding from the outset. The superintendent and his staff manage the plant, but they do it on a straight fifty-fifty basis; if any question is raised its determination lies with the works council. If the council deadlocks it is possible to re-open the discussion, and perhaps an alternative may be suggested. If it is still deadlocked there is direct appeal to the highest executive officer, the president.

There is a time limit placed upon the president within which to arrive at a decision—ten days—and the decision arrived at is put into effect within a further period of five days.

A general council may be called wherein the representation is made up of at least two employee representatives from each plant elected by the employee representatives in the local council, or one for each thousand employees. A general council meets at the call of the president, with a number of company officers not greater than the total number of employee representatives, and it functions as a works council except that its decision applies to all the plants represented in such a council. The employee representatives have a right to recess and withdraw and act secretly. Any one of them can return to his plant and discuss any question with the works council or with the employee representatives alone, or with the rank and file if he so desires, and then come back to the postponed council meeting, having had the benefit of direct consultation with his constituents.

If the president is unable to settle satisfactorily by his own action, or through a general council, any question referred to him, arbitration may be had by mutual agreement. It was thought desirable to make no restrictions and to take nothing away from the rights presently enjoyed by the employees; therefore, we adopted the plan of arbitration only in the event of mutual agreement between the men and the management.

If arbitration is agreed upon, it must be before a single disinterested non-partisan arbitrator. If no such person can be selected, each side selects one and the two select a third. The majority of the arbitrators rule, and their decision may be made retroactive.

I think the most significant statement I can make with reference to our experience is this: we began operating nearly two years ago, and at that time 19 of the plants in this country and in the States adopted the plan, only one rejecting it. Since then three other plants have accepted it—two of them industrial railroads owned by the Harvester Company, and the third a mill which had been burned down and resumed operations just a year ago. At the time when the council plan was submitted to secret ballots in that mill there were only 14 negative votes against the plan out of 250, showing a growing faith in the plan on the part of the employees. In nearly two years we have had 19 councils, and latterly 22, meeting regularly once a month and many times in special meeting. With a single exception they have agreed on all questions brought before them.

A year ago last June, at the Wisconsin Steel plant in Chicago, the Council came to a deadlock. Three days later the president met the representatives and made a compromise proposition. They withdrew for caucus and returned and said they found themselves unanimously in favour of accepting his proposition, but before doing so wished a recess of three days to consult their constituents. They consulted their constituents and then returned and said that every man

had thought it a fair proposition, and it was put into effect and has resulted in an increased morale very definitely expressed in an increased output in that shop.

I believe that the most significant fact in our experience is that this frank exchange of views—this getting around the council table and talking over matters of mutual interest before there is a crystallization of thought, has resulted in perfect agreement with this one exception.

Our council plan includes two points common to most other plans. One is the guarantee of no discrimination because of membership or non-membership in any labour organization, or because of race, sex, religious or political affiliations; and the second is the guarantee of independent action. If at any time any works council member feels that he is discriminated against because of his actions, as such, he may appeal directly to the president of the company for adjudication of his grievance. If he is not satisfied with that, and if he requests it, he must receive the benefit of arbitration before a single, disinterested, non-partisan arbitrator. We have never had such an appeal. There has never been a suggestion from an employee representative that he had been discriminated against. And yet I think it is all important that we should have such a guarantee, because, after all, we have found that our problem is not so much with the employee representatives or the council or the management representatives.

I think the advantage that has come to the management representatives through their direct intercourse with the representatives of the employees has been of far greater value to the company than it has been to the employees; but, if the plan is to be wholly successful, it is necessary not only to carry the works council into agreement but also for the employee representatives to carry their constituencies with them. That point has received a great deal of thought and care. We have made the position of works council-man dignified and important, and have enabled him to meet his constituents and consult with them so that the decisions arrived at in council may carry the shop.

I do not think any official of the Harvester Company would say that our plan is an unqualified success or a panacea or the ultimate solution; but we feel that it is a means to a desirable end and that we are on the right track.

For the first year and a half employment was continuous, wages were steadily increasing, and any matters which came up were easy of adjustment. Recently a change has come. The manufacturing programme has had to be decreased. We are now talking of shortened hours and decreased production, and with the general decline in the cost of living we will soon be face to face with the proposition of talking decreased wages as well. These things have been frankly discussed in council, and thus far there has been no indication of a discontinuance of the happy relations which have existed in the past. Nevertheless, I think before we would care to state that the works council plan was an unqualified success, we would want to complete the cycle on the downward as well as the upward trend. There is no cloud on the horizon, no fly in the ointment; it seems an assured fact that we can go through the cycle, because, after all, changes are necessary, and if the full facts can be shown to the employee representatives, and through them to the employees, there will be such an understanding of the matter as will lead to acceptance.

I note your allusion, Sir, to the situation in Russia, which is a matter of intimate concern to all of us. My own thought is this: while the Russian people three or four years ago may possibly have been as well cared for under the Czarist regime as they are to-day, yet they did not have the knowledge. They had things done for them and with them, but they had not themselves participated in the determination of their condition, and were not satisfied. It is a principle of basic psychology that we are only mildly interested in what others are doing

for us, or with us; but we are most interested in what we are doing for ourselves and by ourselves. If the Russian people could have arrived by actual participation at the condition in which they were under the Czarist regime, we would not have had the break which occurred. I believe that application of the works council idea is going to be a great factor in protecting our country from any revolution, any class conflict.

THE MINISTER OF LABOUR: I wish that every employer and wage-earner in Canada could have heard what we have listened to in the last twenty minutes. I am sure it would have been a profit to them and to Canada. We are indebted to Mr. Young for his kindness.

There are a number of gentlemen here representing different industries, and I want them to feel free to say anything they wish in connection with their own experience.

Address of Mr. Wm. M. Gray, Vice-president and Asst. General Manager, Gray-Dort Motors, Limited, Chatham.

Mr. Chairman: The attention of the management of Gray-Dort Motors Ltd., was first attracted to the action of Industrial Councils, Works Councils, Industrial Relationship Committees, etc., through reading various reports, from time to time, of the apparent success of some of the various industries who had adopted this plan in the States; and at a later date, a practical demonstration was given in our own town by one of the branch American industries which was located locally, adopting the plan in their plant, with the result that after a very careful and thorough investigation, we decided to adopt the plan of incorporating the best suggestions from those that had been brought to our attention. We were successful in this respect in getting a good set of by-laws, which appeared interesting; and therefore published in a special Christmas announcement to our employees our intention to at once adopt this plan.

Contrary to the usual procedure, we did not ask our employees to vote whether or not they should adopt same, but simply stated that we intended putting it into effect. A set of by-laws was immediately published, in concise book form, passed out to those in the organization, and the plan became operative.

The first nominations were called for Friday, January 9th, 1920.

At that time, the original plan called for the election of one representative on the employees' side, from each of the four divisions or plants, one executive to appear on the board for each of the employees elected, a secretary and a chairman; the secretary and chairman having no voting power in the meeting.

Following the nomination, the election was held on January 13th. There was not a great deal of enthusiasm displayed, and in lots of cases, the plan was not welcomed any too much but was looked upon by the majority with a good deal of indifference.

The first meeting was held on Friday, February 6, 1920, at 8 p.m. The chairman explained in detail, the reason for the Works Council and its future actions, stating that its procedure would be parliamentary, and that those making application to it for any redress or grievance, at any time, would be granted its full protection and immunity, from any ill-will or spite which might arise from petty executives, through having complaints lodged direct with the Council.

At this meeting, also, the ballot was cast to determine who should be the expiring members for the future term, as this was necessary according to the by-laws.

A special meeting was called for February 26, 1920, at which a number of changes were inaugurated, one being that the by-laws were changed to include American citizens in our franchise rights, so they could become eligible to be members of the Council. This action was taken, through their being just as loyal and efficient in our service, though previously debarred by the word "foreigner" in our by-laws.

Also, our main plant was given permission to increase its employees' members by two, as they were not adequately represented, according to the number employed in that plant.

In April, a very serious fight for supremacy developed between the union forces who were organized in the district, and the Works Council. Numerous interesting discussions were held from time to time, and members of the union forces were invited to attend the Works Council meetings; and the Works Council had to put up a real fight, battling for its very existence. But, omitting further details, we were fairly successful in passing a resolution endorsing the Works Council, which resolution was as follows:

That the employees of the Gray-Dort Motors Ltd. back their Works Council with their unqualified support for the purpose of giving it an opportunity to demonstrate its ability to cope with all industrial situations, such try-out to be at least for a period of one year from its inception, January 1st, 1920, to the absolute exclusion of all other organizations. This resolution carried by ten for and one against.

In August, a special meeting was called, at which an explanation was given by the management, of the forthcoming industrial crisis; and after a great deal of interesting data had been presented, the Works Council unanimously passed a resolution which is as follows, and which is self-explanatory:

That the Company reduce their building schedule to 15 cars per day. That a general reduction of 5 per cent on all existing piece work and day work rates be made with the exception that all day rates of 50c. or under remain as at present, also the Superintendents at their discretion to adjust the higher piece work prices. This is to be effective September 1, 1920.

At the September meeting, it was found that a great deal of the time of our Works Council members was taken up by complaints which were sometimes presented to them during working hours by the other employees; therefore, the management decided that, in order that no personal sacrifices be made, in carrying out the routine duties, each member receive the sum of \$5 per month as an indemnity against such lost time, which they received monthly thereafter.

The question was brought up as to the best time of the day to hold the meetings. The meetings were originally held in the evenings; they were changed to the afternoon, following dinner, and then back again to the evening; and at the present time they are being held between five and six-thirty in the afternoon. Up to the present, this is found to be the most practical time and suits the men best as they do not have to come back after supper, and they are still quite able to accomplish their work, as the factory closes at five o'clock. In cases of any special quantity of work to be taken up, it is necessary, of course, to revert to the evening meeting.

There are of course a great many details that come in the activities of the Works Council, which are very petty in lots of ways, and sometimes try sorely the patience of those in charge. But if these are met fairly and squarely, reasoned out and explained, there is yet to come, in our experience, a condition that we cannot face, because the most surprising thing of all is that most of the things brought up at these meetings were just as much, if not more, to the benefit of the management than to the men.

The following are a few of the things which have been handled by the Council: Numerous times improved tools and labor saving devices have been suggested by the Works Council. The pay days were changed from bi-monthly to every alternate Friday. Preference was given to employees laid off at one plant, and seeking work at another plant, under the same management. Girls were protected from working overtime, by the installation of additional machines. Considerable saving made in scrap material, which was formerly wasted. Safety-First Committee did valuable work in the improvement of dangerous machinery. The Housing question was investigated. A Sick Benefit Association was formed. A Welfare Division was inaugurated. A wage reduction resolution was passed by the Council. Minimum rates were set by the Council. Ventilation in bad parts of the factory was improved. These, briefly, are some of the bigger activities that the Council have undertaken in the past.

I have explained the history and operation of the Gray-Dort Works Council up to the present time, and the majority of the employees now stand back of it with their utmost support. It is not a panacea for all ills, it is not a miracle worker; but it is an excellent plan to bind an organization together, as nothing else will, and help to reach that goal which labourers, manufacturers and employers would like to arrive at some day, namely, an ideal working condition. And, it attempts to reach this condition, not so much by battling with the condition, as by trying to remove the cause that made the condition.

In addition to our own, there are two or three other industries in Chatham that have works councils. Our Chamber of Commerce have had the foresight to see the benefit of works councils, and have formed an Industrial Relations Committee. This committee is the final court of appeal. If we cannot agree in our works council, we can take the matter in dispute to the Industrial Relations Committee of the Chamber of Commerce, which is composed of four of the directors of the Chamber of Commerce, and four of the plural (workers) members, who are given their membership by vote of the workmen in the different industries in the city. This committee is doing a valuable work. They canvassed our city a short time ago with a view of starting every manufacturer along this line. They were successful, I believe, in getting almost sixty per cent of the large industries signed up, and some have already adopted the scheme. This committee is doing a very valuable work from the Chamber of Commerce standpoint towards bettering conditions in our city.

I mention that because I feel that it is somewhat of an innovation and improvement. It provides the arbitrator, which so many of us would like to have, in case we come to the point of needing one.

THE MINISTER OF LABOUR: Are your employees organized? Are they members of the various trade unions?

MR. GRAY: I should judge that probably 35 per cent of them are organized in what they call the Aircraft and Automobile Union.

Address of Mr. George Valentine, Assistant General Manager, Massey-Harris Co., Ltd., Toronto

The Company which I represent has had an experience with Industrial Councils of a slightly shorter duration than that of the International Harvester Company and which has just been reported by Mr. Young. We have four councils, one representing each of four factories. They have been in operation since May of 1919. It might be considered that they came into being at a rather

trying time—just on the eve of the May-Day strike of that year. For some months previous to the formation of our Councils, our Directors and heads of departments had been working on the problem of the formation of a Constitution for councils. We had before us the Whitley and Colorado plans also the plans that had been adopted by a number of industries.

I believe we paid the plan of the International Harvester Company the greatest compliment in that we adopted more features from it than from any of the other plans. We, however, first wrote to the International Harvester Co. telling them what we proposed to do and they very graciously replied advising that we were entirely welcome. Our plan or constitution of our Council, therefore, very closely approximates theirs and is along the lines of the Colorado plan.

When our scheme was ready for adoption we had printed copies of the proposed constitution placed in the hands of each employee, and the employees were asked to elect their delegates to the councils. They did so. The constitution as originally drawn up was adopted, though since then a few minor changes have been made. For instance, at the first meeting of the Toronto council the elected members advised that they felt it would be a good thing to have a provision for notice of motions so that each councillor would be advised as to the matters that would come up for consideration at each meeting and would be prepared to discuss these matters intelligently. This change to Constitution was adopted. It has worked equally well either from the employees' or the Company's point of view.

The Constitution of our councils as originally adopted provided that only Canadian and British citizens were eligible for elections as councillors. We worked on that basis for a year and a half, but last autumn we received a notice from the elected men of our Toronto council to the effect that they desired to have that restriction removed. At the same time the elected men of the Toronto council also served notice of motion to the effect that they desired to have the constitution amended so that any two years of service in the Company would qualify an employee for election on the council. Both of these questions were thoroughly discussed, and while there was some sentimental desire to have the restrictions as to Canadian and British citizenship remain, it was finally decided that it would be entirely safe to leave to the judgment of the employees the matter of suitability of candidates elected, and so both motions carried.

Both of these amendments and in fact also the amendment previously referred to, that re notice of motions, were adopted by the other three councils as well.

When our councils were formed, I had the honour to be elected chairman of the Toronto council. I do not think it would be too much to say that the elected men came to the first meeting in a spirit of watchful waiting. This probably to some extent was because of the unsettled times. We were then in the midst of the May-Day strike above referred to. It did not take long, however, for that spirit to pass away and within a few months the chairman of the elected section made a statement in the meeting that he and his colleagues who had had an opportunity of hearing the policy of the Company enunciated by the chairman and of listening to the views of the appointed members expressed in debates, were quite convinced of the fairness of the intention of the Company and its representatives. Their difficulty was to get that feeling across to their constituents who had not such opportunities as they.

With a view to helping that condition a little, we have a stenographer on hand at each meeting who takes the discussions as nearly verbatim as possible. The formal motions and reports etc. are recorded on the Minute Book but in addition we have the more amplified, if not verbatim, report published for the use of our employees.

At first our councillors advised that they had difficulties with their constituents when they returned to the shop after a meeting unless they had gained some concession for said constituents. That difficulty has gradually disappeared and the elected men, as well as the appointed men now more fully appreciate their dual responsibilities and there has been a lot of co-operative work done on both sides of the council. Of course industrial conditions at the moment are very different from those which prevailed when our council was first organized and our men now, I think, recognize that if they can hold their own and not lose any concession previously granted, they are doing pretty well.

Our experience has been that the elected men, the employee representatives, have been more than fair in their attitude. As an instance I might mention that we on one occasion had to change the foremanship of a department. The previous foreman had been promoted. Some of the men in that department came to the superintendent to advise that if a certain man whose name had been suggested were to be appointed they would go on strike. The Superintendent advised that the appointment of this man had already been made. He asked what was the matter with the man and the answer was that they were told he was a slave driver. The Superintendent replied "who says so or what do you know about him from actual knowledge?" They could only repeat that he was said to be a slave driver. They were apparently not in a reasonable mood that morning and so went on strike. The employee representatives of their council when they heard what had happened, were quite annoyed with the men of that department for having gone on strike without consulting their representatives on the council. These councillors took it upon themselves to round the men up and to reason with them. They spent the better part of half a day on this, the Company not being at all represented.

After a good deal of discussion they asked the Superintendent to join them. It was shown that the new foreman was a very fair man and one that had gone out of his way to assist cases of workmen in distress. In support of the claim that he was not a harsh or unfair man it was pointed out that the employees in the department of which he had previously been foreman, were ready to come over and to help him out on the new job if there was to be any trouble. To make a long story short, the men who had gone on strike receded from their position, and since that time everything has been extremely harmonious in the department.

Like the International Harvester Company, we have the panel system, though, as a matter of fact we have only used it once. On that occasion the employees' section were not able to carry their own panel. The men who had moved and seconded the motion were unwilling to drop it and it was taken to vote with the above result. Apart from that one occasion every vote has been in the form of committee of the whole.

Like Mr. Young, I do not think we have reached the ultimate. There is one thing, however, that I have felt from watching our council operate, and that is that it carries with it a very decided indirect benefit to the employees, a greater benefit in fact than most of the direct ones, but one which is not always recognized. I mean by this that every Company is, so to speak, at the mercy of

its foreman or its agents or those who administer its policy, and is held accountable for the acts of these foremen etc. To the employee the foreman is the Company. Every one of our foremen and superintendents now recognizes that if his act will not stand investigation it may and probably will come before the Council and so almost unconsciously they are more careful than they otherwise would be not to act arbitrarily. This is a great advantage not only to the men but to the Company. Our Councils have provided a means of communication between the Company and the men which it would be difficult to have otherwise provided, and I have no hesitation in saying that our Councils have earned their place. I do not think they are a panacea or that they are a cure for all ills, but from our experience I have not any hesitation in saying that they are a step forward, and I have had personal knowledge from the watching of our Councils in action.

Our Company is somewhat smaller than the I. H. Company—most companies are—and so in our constitutions we consequently have a smaller number of men composing the elective divisions. We have some women employees. We formed them into a separate voting division so that they would always be sure of having a representative.

It has been suggested on one or two occasions that possibly our Councils were not worth while; that they were not so appreciated by many of our workmen. We felt that the elections which took place last December would provide a pretty good indication of how the men felt on the matter of the worth of the Council. These elections I am glad to say were very closely contested. In one Department we had a triple tie, but none of the three men would on any account consider standing back in favour of the others. We had to have another election to break the tie.

Address of Mr. Wills MacLachlan, Consulting Engineer, Toronto.

I do not know that there is much that I can add to what has been said before. I have had the pleasure of designing some of these plans, but hardly of operating with them, except primarily in accident prevention committees and work of that kind. Possibly an account of the launching of what is now a nation-wide movement in the building industries might be of interest to you. I well remember, almost two years ago now, being asked to see what I could do in the building trades in Toronto, with the idea of bringing the representatives of the employees and the representatives of the employers together.

Upon investigating the question I found that there were four groups of employers—the general contractors, the electrical workers, the plumbers, and the painters—the general contractors, of course, being the largest group. I found also on the employees' side that there were 19 different unions having a builders' league with an executive of five men. Both of these sides had been dealing with each other as organizations; in other words, the unions were recognized by the employers' associations. I worked on the idea of calling together two representatives of the general contractors, one from each of the other groups on the employers' side, and six executives of the Toronto Building Trades League. They met on the 17th of March in that year, and at that time I do not think they were very hopeful of much good coming out of the conference. Within two weeks they had a council. They suggested that I should be the chairman of it, and I suggested that they should get an outsider who would have more interest in the building trades than I, and that he should be obtained from the Association of Architects. I understand that they offered to the Toronto Chapter of the Association of Architects the pleasure of nominating the chairman.

Since the 1st of April of that year I have not sat in with that council. I understand, however, that it is working very satisfactorily, has solved two or three difficult situations, and that everything is going along in good shape at the present time.

The council was formed rather more quickly than anyone in touch with it thought it would be formed, and I think it has served a useful function in the matter of the building trades in the city of Toronto.

THE MINISTER OF LABOUR: May I say that Mr. MacLachlan was good enough to give a great deal of his time during the war period to aiding the Department of Labour and the Labour Sub-Committee of the Cabinet in bringing about better relations in Canada between employers and labour. One of the things he undertook was the work which he has just outlined.

Address of Mr. John H. Frye, in charge of Industrial Relations, Canadian Consolidated Rubber Company, Limited, Montreal.

In the summer of 1919, the Executive Officers of our Company at Montreal were of the opinion that by the formation of Works Councils the employees and management in our plants, would get a closer co-operation, a better understanding of each other's point of view and responsibilities, and a healthier, happier work day for all concerned.

The factory managers were called together to discuss the proposition and were in favour of establishing such a policy, definite work being started in October, 1919.

The proposed plan of Factory Council was of the committee type, composed of employees and management representatives, working together as a body and in committees for the discussion and decision on any questions of interest in the operation of the plant.

The proposed plan of organization, after being discussed and sold to the Factory Manager, was taken up next with the staff representatives, then with a body of the employees, the points in the by-laws being discussed from all angles and changes made at the different plants to fit local conditions such as length of service of Employee Representatives, number of representatives chosen and the number of committees to be formed.

After the Factory Manager, Staff Representatives and Committee of Employees had gone over the subject very thoroughly, the proposition was put to the employees either through instructive bulletins or through direct talks with different groups of employees. At the time of the employees holding their nominations and elections they were asked to signify their approval or not of operating under the proposed Factory Council by-laws.

We have in our organization eighteen factories; some of these factories being so located that at three points two of them are under one management and at one point five are under one management.

Through the monthly meeting of our Factory Managers the Factory Council idea has been developed with great interest. One after the other of our Factory Managers have signified their intention of putting up the proposition of Works Councils to their staff and employees, until at the present time we are operating a Factory Council, or the same is in process of organization, in practically all of our factories.

I would suggest to anybody who is thinking of operating a factory on a Factory Council Plan that the same be developed with great care, especially after

the proposed plan is formulated, that the people most interested in it understand all of the advantages and points to be gained by the introduction of such a plan, namely that the Factory Manager, the staff, and the employees understand from start to finish just what it is that they are going to do.

As to the operation of the Factory Council, we believe absolutely that every question that comes up for settlement is in the first place a question between the employee and his foreman or immediate inspector. We point out clearly to our employees that the foreman is in charge of that branch of the work and held responsible for same and must be treated with respect. On the other hand we expect our foremen to see that their employees are getting a square deal at all times and we expect them to handle their employees with courtesy and fairness.

A point which is not settled between an employee and his foreman may be advanced by either one of them, first by taking into conference the Employee Representative in the group and the Management Representative who is in charge of Industrial Relations at the Plant, then to one of the Council Divisions who are most interested in the question which is under discussion.

The foreman has absolutely nothing to fear from the Factory Council organization if he is dealing with his employees on a fair and square basis. If an employee forces a question over his head to one of the Council Division meetings, it will then be settled over the table by conference and the foreman's decision upheld. On the other hand the employees have nothing to fear from the Factory Council as they are allowed the same channel as the foreman in bringing the question before the Council Division meeting and the Management guarantees to employee representatives that they shall be free to discharge their duties in an independent manner without fear that his individual relations with the company may be affected in the least degree by any action taken by him in good faith, acting in a representative capacity.

If the Council Division which first discusses this question is unable to reach a decision they may finally agree to pass the matter on to the Executive Board which is composed of the Employee Chairmen of the different committees, and an equal number of Management Representatives. If this committee cannot reach an agreement we believe that the employees should be allowed to choose anyone whomsoever they like and the management will choose whomsoever they like, to form an Arbitration Board. If these two cannot agree they shall appoint a third person and the decision of this Board of Arbitration is final.

Many people have asked us why we set it down in black and white in the by-laws, that the company is willing to open the doors and go clear through with any subject which may come up. We believe in the first place, that nobody is better able to settle any dispute than those directly concerned in it, and if our employees and management cannot come together somewhere along the line, one of them is radically wrong somewhere. We believe that our arbitration clause acts as a safety valve. Although the management and the employees know that any question which they cannot settle among themselves will finally come to arbitration they will be much more careful in trying to reach an agreement among themselves somewhere along the line. Take for instance if there are several questions on the budget to be discussed, the first one may be quite a bone of contention. It is easy enough to set this question to one side for the time being and get busy on other matters. By the time this committee has worked together on three or four questions, they are co-operating and working

together and it is much easier to turn to the contentious matter and nine times out of ten, reach an agreement.

We believe that our nominations and elections should be run separately, nominating two employees for each representative to be finally chosen. In this way the final choice will represent over 50 per cent of the employees interested.

We believe that our Employee Representatives should be paid. The decision on this in talking it over with our employees is that during working hours Employee Representatives receive from the company payment at the rate per hour of their individual average earnings. If, however, the meeting is held after working hours, members of the Employee Representatives receive payment at the rate of their collective earnings.

We have a clause in all our by-laws guaranteeing the independence of Employee Representatives. We also make no discrimination against any employee because of race, sex, political or religious affiliations, or membership or non-membership in any labour or other organization.

The minutes of all meetings are posted throughout the plant on bulletin boards.

Any part of our Factory Council plan may be amended at any time. The amendment must receive the approval of both the Management and the Employees.

Statement by Minister of Labour regarding Canadian Railway Board of Adjustment No. 1.

I am sure we have listened with very great interest to Mr. Frye and others who have spoken. Before adjourning, I would like to make brief mention of an industrial council that has been established in Canada, but which is not represented by any gentleman here to-day. I refer to our railways. This council has been an undoubted success. In July, 1918, great difficulties were looming up on our Canadian railways with respect to wage matters, because from 1914 to 1918 our railway boys had carried on very loyally without an increase in wages commensurate with the increase in the cost of living. A meeting was held, with which I happened to have something to do, and 79 representatives of the railway employees, and 24 representatives of the railway companies, met together and reached a decision that there should be no interruption of transportation during the war, no matter what difficulties might have to be met with. In order to provide machinery, with this in view, a board consisting of six men representing the employees and six representing the railway companies was established, and since that time, notwithstanding the fact that the war has been over for two and a half years, any questions arising which were not possible of solution between the individual railways and their employees, were referred to this board and thereby satisfactorily and unanimously disposed of, and there has never been occasion to resort to the Industrial Disputes Investigation Act on our railways since that time, with one exception. The arrangement has been an unqualified success; and while the agreement was entered into only for the duration of the war, it is still in effect. I am convinced that this general principle is absolutely sound, and I am delighted that so many of our larger employers are giving attention to it.

THE CHAIRMAN (Mr. Brown): We have with us Mr. C. Ching, Supervisor of the Industrial Relations of the United States Rubber Co., who, I am pleased to learn, is a Canadian by birth, and who has come all the way from New York to take part in this Conference.

Address of Mr. C. S. Ching, Supervisor of Industrial Relations of the United States Rubber Company, New York.

Mr. Chairman, I will attempt to outline in a general way some of my ideas in regard to works councils, and some of our experiences on the other side of the line. The experience there has been practically the same as that of the Consolidated Rubber Companies' factories, as outlined by Mr. Frye. Previous to my connection with the United States Rubber Company, I was with a company dealing with representatives of organized labour. We had 18 different unions, and it was my job to negotiate with the representatives of those unions. From that experience it was my belief that in order to establish some sort of contact between the employer and the employee within a factory, where the group of employees was so large that it was not possible for the management to know them personally, it was necessary to have some kind of organization. My experience with the various unions there demonstrated that it was necessary to have contact of some kind with the employees who were vitally interested in the particular plants. I made an investigation of works councils in several of the large corporations in the United States, and the more I saw of them the more I was convinced that there was some way to bring about a relationship within the plant that would produce results.

Factory councils, works councils, industrial councils, or whatever you please to call them, are merely based upon the fact that 98 per cent of the people in the world are fair if they know the facts. That is about all there is to it. Take any group of people—take you gentlemen here with any propositions that may come before you—if you know all the facts I am willing to gamble that you would reach a pretty fair decision. The development in the United States has been along this line. Take it in our New England industries where we had small plants, where one man owned a plant and had two or three other fellows working with him. Those men knew each other, they were associated with each other, and their problems were common and they co-operated to work out their problems.

But as plants grew, various problems of management entered into the question; the managers had their time taken up with matters of manufacturing and selling and machinery, with the result that the employees and the management grew away from each other. There was not the opportunity to know each other's problems and I want to say that when we know each other's problems within our plants, we will have taken a long step towards settling most of our industrial difficulties.

We have in the United States Rubber Company at the present time fourteen what we call factory councils operating. I hope no one here will be misled in regard to factory councils; I hope no one will get the idea that you can take any kind of plan and put it into your plant and have it work. We have in the United States organizations for building and selling industrial council plans, and have them on a very high production basis, and you can go to them and buy these things and they are guaranteed to work. All that, Sir, is very ridiculous and absurd when you stop to think that all you are endeavouring to do is to have some means whereby it is possible for all the people in the plant to give their view-point to the other fellow and to get his.

The best plan of industrial council that can be devised in any plant is the one that will best suit that particular plant, and the best way to determine what plan will suit that particular plant is to get together with all the people in the plant so that you may know all the view-points and work out the plan with them. However, there are certain things which are absolutely necessary. Mr.

Frye spoke of arbitration. As a result of my experience in negotiating labour grievances, I believe it is necessary to have some sort of plan of arbitration in every industrial council plan—not that you will ever use it, not for the purpose of arbitrating, but because an arbitration clause in any labour agreement or plan of this kind is one of the best instruments of negotiation that you can possibly have. There is no need of anyone going out and slamming the door if you have an arbitration clause; but if you have not got it and anyone goes out and slams the door you have no way of getting him back in again. I believe there should be an arbitration provision so that you may have all the negotiation that is possible and if you go at it in a fair-minded way, any negotiations with your employees can be carried to a successful conclusion if you have confidence in them and they have confidence in you. One of the fundamentals is that you must have confidence in the employees or they will not have confidence in you. Confidence must be mutual.

Another thing of which I am convinced—and I think everyone thinking of factory councils would be—is that there should be no discrimination. First you must guarantee the independence of the representatives so that they may be free to express themselves when acting in a representative capacity when matters are being taken up. A man must not be discriminated against because he says so-and-so or that the foreman is to blame, no matter whether he is borne out by the facts or not, so long as he honestly believes in what he says. You must not permit a foreman to discriminate against a man because he has taken a matter up in a certain form. Another thing which I think is necessary is that there should be no discriminating against a man because of membership or non-membership in a labour organization. A plan that discriminates against a man because he belongs to a labour organization is not open and above board and on the level.

If industrial representation is good, we want everybody in our plants to know it. Industrial representation does not mean that you have a little organization in your plants functioning in an independent way. You have representation for one purpose and one purpose only,—that of getting together with your employees on a proper basis, and giving everybody an opportunity to express himself freely—and unless you do that on an honest, open and frank basis you won't get very far.

More employee representative plans have succeeded in the United States than I thought possible, when you take into consideration some of the conditions under which factory councils have been installed. Some of them are going ahead to-day and working out very well, not because of, but in spite of the way in which they were installed.

It is natural for employees in some industries to be distrustful of their employers; it is natural for the employer to be distrustful of the action of the employees. In some instances they have both been at each other's throats; they have not attempted to get together to work things out. In most instances where trouble has occurred there has been an attempt on the part of someone to dominate, to put something over on the other fellow—and "if the other fellow puts it over on me, I will put it over on him if I get a chance." You cannot have that spirit, and any employer who puts in an industrial council with the idea of putting something over on the employees will find that his industrial council will not work unless he has a change of heart. I have known of cases in which I sincerely believe the employers put in industrial councils for the purpose of putting something over when they got the plan working; but when they found the employees in their plant willing to co-operate with them on a fair and honest basis they had a change of heart.

We have had some rather remarkable experiences—that is, they were remarkable to some people, possibly to some of our foremen and some of our superintendents, because they did not believe that the employees would co-operate through the factory councils in the way they did. We had an instance in one of our factories where the employees, through the council, asked for a 25 per cent wage increase. That was a matter that would come up through the representatives and would go through the various committees, and, if it could not be settled in committee, would eventually go to arbitration. When the matter was brought up the manager asked the employee representatives on what basis the increase was asked for. The claim was made on the basis of the increased cost of living. The employees said that they believed the cost of living in that particular community had advanced to a greater extent than it had in other parts of the country. We placed what facilities we had at the disposal of the employees so that they might secure a proper survey of the cost of living in that community, and after they had considered this, they came back with the report that whereas wages had increased 118 per cent, and the cost of living only 90 per cent, a further wage increase was not justified at that time. This information was posted throughout the factory, and the decision arrived at was entirely satisfactory to the employees. In other words, it was just a case of getting at the facts in an open-minded, fair way.

We have had throughout all industries everywhere the problem of the foreman and the little "boss". A lot of managers of industry to-day, if they have any suspicion of what the little "boss" is doing, will get busy and go down and get to know that little "boss". What I say in this regard is just as true in one factory as in another. To the man at the bench the little "boss", the foreman, is the company; and if industrial councils are not useful for any other purpose than to make bigger men out of your foremen, they will have done much in that way alone.

In a certain plant the foremen all meet together every week. When the industrial council plan went in there the foremen said: "We are sold on it, we are willing to give it a whirl,"—but there may have been some mental reservations. They were not very sure how it was going to work out. However, in this particular plant after a few months' experience with the industrial council, a request was sent to the employee representatives, through the management, asking to have representatives of the council sit in at every foremen's meeting. This worked out very splendidly indeed. The foremen in making a decision know the viewpoint of the representatives, and when a matter is brought out to the factory, the representatives know just why a decision is made and are in a position to explain it.

There is something that we all ought to realize, and you will realize it more fully when you have councils in operation; the majority of your employees are more loyal to your company and to your industry than you give them credit for being. There are a great many employees in industry to-day who have just as much and possibly more pride and loyalty to those industries than we suppose. We want to have those employees appreciate that they have something worth being loyal to; in other words, we want to give them our confidence and I don't know of any other way of giving it to them than by some plan of getting together.

It does not make much difference what you call it—an industrial council or a town meeting—but gentlemen, don't get confused when you are thinking of factory councils. Factory councils establish an organized relationship between all the people in the plant, giving them opportunity to get acquainted and to pull on the same rope in the same way instead of pulling against each other.

I do not know how it is in Canada, but I do know that in the United States during the past four or five years there seems to have been a very well organized

publicity campaign carried on from Congress, from the Executive Mansion, right down through the churches, colleges, newspapers and magazines,—to build up class consciousness. In the name of common sense, if we have in our industries to-day managers who are sincere and workers who are sincere, isn't it absolutely necessary that the management should know what ideas the workers may have in regard to certain things? Isn't it doubly essential that the people at the bench should know the viewpoints and thoughts of the management? In that way we shall develop a sense of responsibility on the part of both the management and the workers which cannot be established in any other way. They must be got together and that can never be done on the basis of class consciousness. Whatever plan you devise, be sure that it is a plan which everybody knows is the best that can be worked out for a particular plant.

In one plant of 4,600 employees, 90 per cent, were non-English speaking. They were not born in the country, they were aliens, and were not citizens. I do not know how many languages were spoken in that plant. When the proposition for a works council was brought forward, the manager of that plant feared that it would not work. But he was one of those fellows who says: "Well, if anyone can make it work I can," and he went ahead. I think the plant has done more to bring all those people of various nationalities together and to enable them to meet on common ground than any other one thing we could have done. One of the matters the council brought up was the question of putting in schools and co-operating with the community in the teaching of English. The problem was worked out, and the result is that the schools are very well attended. The employees, meeting together in council, discovered the necessity for having some common language, and they went ahead and encouraged the schools. The problem over there is a little complicated, of course, on account of there being so many nationalities; but it always comes back to the principle that 98 per cent of the people when they know the facts, no matter where they may have been born, can be depended on to be fair.

We have had other cases in which the I. W. W. have gone into a plant. In one case in New Jersey the men of a neighbouring concern were out on strike as a result of the I. W. W. and they were around town distributing radical circulars and so on. The manager of our plant became quite concerned and called the council together and said, "Gentlemen, I want to talk to you about this business; it is looking pretty serious." The chairman of the council got up and said, "Mr. Manager, this is not your problem; it is our problem. We will take care of any I. W. W. situation that may develop in this plant. We believe in this council plan, and you need not worry a bit about the I. W. W."

A little resumé of our experiences in regard to elections might be of interest to you. One of the things that has been said quite frequently is: "Well, all right, if you put an industrial council into my plant all the radicals in the plant will be elected, and then what are you going to do?" Another thing that I have heard is: "The plan may work all right in your plant, but it won't work in my plant." In our first elections 314 representatives were elected in 14 factories. The average age of the representatives elected was 37.9 years, hence they did not put in the young fellow who might not be stable. The average length of service was 12.5 years—the employees elected men who had been long in the service of the company.

The fourteen councils which we have handled 2,309 cases in six months from January 1st to July 1st, 1920. These cases covered a variety of subjects, and in no case did any question in dispute go to arbitration, in other words, the councils negotiated them and settled them satisfactorily to all concerned. I say they were "settled satisfactorily", because under the industrial council plan you

have got to settle matters satisfactorily. That is the beauty of getting together and understanding one another. The matter has to be thrashed out, and before that is done everybody is going to understand everybody else. When you get a group of people together and they understand each other and are sincere, they can settle anything.

We do not have industrial councils in all plants. In one group it became necessary to consider a readjustment of wages. Within a comparatively recent period—the last two or three months—other concerns were cutting wages and posting notices, and laying off men. We recognized the necessity for getting the price of our product on a competitive basis. We did not want, however, to make any wage adjustment which would be considered unfair. The matter was taken up with our industrial councils and discussed thoroughly; the question of the price of the goods was gone into, as well as the cost of living, and other expenses. It was our experience that the factory councils functioned just as well when wages were going down as when going up.

The rubber industry, as you know, is not a unionized industry in the United States. In two or three cases, however, there are organizations. I would like to mention one instance in Connecticut. I may say that was one of the federal unions as distinct from a craft union. The president of the union was elected chairman of the employees' committee, and while I do not know, I presume that he consulted the local organizer, and as the thing went along in the factory, the interest in the labour organization at that particular point seemed to die out. I do not think there is any union there at this time. That, as you understand, was one of those unions which grew up overnight. In another case the chairman of the factory council was at one time a delegate to the central labour union,—in fact had been for about ten years. He was a very able, level-headed fellow, and in one instance, in discussing a matter of a wage adjustment, around the table, he said: "I want to speak about a matter that is entirely apart from this council. I have some very good friends in the Shoe-Workers' Union, and I used to sit in council with them. I would like to take this matter up with them." The man came back later on and said: "It is just as I thought; they decided in favour of you and me." But keep in mind the fact in relation to the rubber industry that it is not a unionized industry in the United States. In a few isolated cases federal unions have gone in; but I do not believe there is a rubber factory that has an agreement with an organized labour union.

MR. VALENTINE: May I be permitted just a word? At one of the early meetings of our council the subject of a wage increase was up. One of the company representatives, one of the appointed representatives, spoke of the dangers of setting a wage rate that might later be found to be unfair to the company, and therefore, in the final analysis, not in the interests of the employee. The chairman of the elected section said, if the time should come when that would be shown to be the case, he had not the slightest hesitation in saying that the employees' section would recognize it cheerfully and consent to a reduction. From my personal experience I have no hesitation in saying that they will look upon it just as fairly on the downward scale as they have on the upward scale.

MR. GRAY: In our council there have been only two wage reductions; one a straight reduction covering the entire salary on the percentage basis, and the other removing our minimum wage rate.

MR. QUIRK: Mr. Chairman, Mr. Ching has spoken with a very profound knowledge of the work of the industrial council; he has spoken of a case in which other languages than the English language are spoken. Mr. Frye went very carefully to work on his plant. We are well aware that Mr. Frye's plant is one of the largest and one of the best distributed geographically in this

country. He has, as we know, factories established in the province of Quebec, which is distinctly a French-speaking section. It has occurred to me to ask Mr. Frye if he has experienced any difficulty, or any opposition, or any different attitude, so far as the French-speaking section of our Canadians are concerned, in establishing the councils in the province of Quebec. We are well aware that the question of language in this country is one that has to be considered, and I would like to ask Mr. Frye in establishing the councils at St. Jerome and Granby, and at Montreal, which is very largely French, how the matter was taken by the French-speaking people. Was there any modification of the plan?

MR. FRYE: The question came up in the Canadian plant in Montreal; "What is going to happen; suppose you get half of these people here who speak nothing but French, the other half would speak English and would not understand French?" The employees' committee in working out their by-laws, when it came to the question of representation, worked their council organization out on a 4,000 basis which would necessitate 19 working representatives on the council, and their officers agreed among themselves that it was very much better for the employees, and that it would be very much better for the managers, if it were possible to have the representatives on these committees speak both French and English. For that reason we finally agreed on a representation of 54 employee representatives, covering every department in the factory and every group of workers, and from the 54 they were able to select 19 who were able to speak both French and English. That is one of the reasons why we had such a large representation in that plant. That is a plant employing 2,200.

At Granby there are about 700 employees in the plant. In making up the list of those eligible for employee representatives, a note was made in regard to the speaking of English and French. They tried as far as possible to get representatives who understood both languages. I should say about 25 per cent of our employee representatives at Granby could not speak English; the rest speak both French and English. We found that to work out very nicely, because if we had a committee, say on working conditions, and there were two employee representatives on that committee who did not understand English very well or did not speak it very well, the other representatives were very much more attentive to every single point in the discussion. Our foremen, too, are also very much more attentive to every point, because the employee representatives, as soon as a thing is said in English, repeat it in French. Half the meetings commence in English and end in French. A person may go on for five or ten minutes in English, and then turn around to French, or one fellow will speak English and another will answer in French.

At St. Jerome our plant is, I should say, 100 per cent French speaking. Although it is 100 per cent French speaking, all the employee representatives speak both French and English fluently. At our Columbus factory in Montreal I should say that 96 or 97 per cent are French Canadians. They carry on all their discussions in French. The foremen speak both French and English, and most of the employee representatives speak English, but they find it more convenient to carry on in French. Our industrial council agent at that point is French, and although the managers cannot speak French, they get along extremely well.

At the Canadian plant our manager is able to speak French quite fluently, and gets along very nicely. This question was one that caused a good deal of discussion. Nearly every one of our Quebec managers said: "I don't speak

French, what are we going to do?" But we found that the problem worked itself out without any trouble.

Along the line of what Mr. Ching has said with regard to representatives of the labour union on our industrial councils, I may say that at Granby we have all the representatives of the International Union, and I think we have all the representatives of the National Catholic Union.

MR. BROWN: What do you mean by all the representatives?

MR. FRYE: All the officers of the two unions. In Montreal, between our Canadian plant and our Columbus plant, I believe we have all the officers of the National union and of the International union. At St. Jerome we have two of the officers of the International union. They have no National union. In Kitchener we have a member of the Trades Council and also the president of the Boot and Shoe Workers' Union. The only place where there was any question was at Kitchener, at the time this council was being formed. This man, the member of the trades committee of the council, became very much interested in the council and was very much surprised when the manager of the plant asked him if he would not talk it over with some of his friends. The thing went on from time to time, and I think the Trades and Labour Council at Kitchener proposed a resolution that none of the members of the union should be employee representatives in this works committee. That resolution, however, was very much overruled, and there has been no further question on that point. It was explained to me that the question was taken up with the workpeople, and they said: "Here, this is absolutely a works council; we are only 15 per cent organized; there is no reason why we should not be in this with the other 85 per cent;" so they practically took their own head for it.

Address of Mr. P. F. Sinclair, in charge of Industrial Relations, Imperial Oil, Limited,
Toronto.

Mr. Chairman and gentlemen, I wish to express my appreciation to the Minister of Labour for the invitation that he has extended to myself in this connection, and also to congratulate the Department of Labour in calling together us men who are, of course, interested in this matter. I think this is a very fitting time for us to get together because we all feel that the year 1921 is bound to be a testing time in all industries. I feel that the Senator has put his finger on the fundamental principle of all our work when he says that if industry is to be carried on with advantage to all parties concerned it must be carried on with the willing co-operation of the men who are called the employers and the men who are called the employees.

The Imperial Oil Company has been a pioneer in this matter. We have had our plan, a very well thought out plan in force now for two years, or a little over, and while it requires almost five years to determine the real results with confidence, still it is our sincere and reasoned judgment that the plan has met the situation in such a remarkable way that every single case has been settled satisfactorily. We have had no strikes. We have plants from St. John's, Newfoundland, to British Columbia; at points in Nova Scotia, New Brunswick, Quebec, Ontario, Manitoba, Saskatchewan, Alberta and British Columbia and now we are putting one into operation in the far north at Fort Norman. We have 14 councils, four of which were put into operation last fall. With my very able assistant, Mr. Thompson, I had the pleasure of organizing those four councils, one of which, in the province of Quebec, is composed practically entirely of French people.

I found that the establishment of that council in Quebec was received with unrivalled enthusiasm. Happily the French language had no difficulties for us, and we found the men willing and anxious to co-operate with us.

We have felt that all questions that have come before the councils have been satisfactorily settled. I have here just a brief statement which appeared in the February issue of the "Imperial Oil Review," which indicates that there were 36 questions of wages settled; 47 questions of working conditions; 5 questions of promotion and discharge; 23 questions of hours of work; 41 industrial representation plans; 58 questions of sanitation, housing, and social matters; and 25 miscellaneous. Each of these cases was settled to the complete satisfaction of the employees and the company. In all 235 questions were adjusted satisfactorily, covering a wide range of subjects.

Another point I think was raised by Mr. Young, and touched upon by Mr. Ching, viz., that the real testing time is to come when wages are to be lowered. My introduction to this industrial council work was a very pleasing one. I had to go to the different councils and inform them that the men had been placed on an eight-hour basis, and that their wages generally were increased about 10 per cent. That was a very easy thing to do. But the real test comes when you have to go to these councils and ask them to agree to a reduction in wages. The Standard Oil Company, with which we are very closely associated, was confronted with the question of the reduction of wages in the Bayway refinery, where my brother is the medical director. I have received a copy of their plant paper, in which the leader is "The victory of industrial representation." On February 1st, the industrial council agreed to reduce their bonus one-half. It was an act of honesty and courage. That is an instance of men who, realizing the whole situation, were willing to play the game according to the rules of operation. I think it is a remarkable thing; it is a remarkable tribute to the men themselves, and it is a remarkable tribute to the plan of the Standard Oil Company. These men did this thing of their own free will, because they realized that the company had undertaken to carry forward its plans of operation on the principle of a square deal. "A square deal" has two sides to it—it means that there must be a square deal with the employee and a square deal with the employer as well. That is where some men fall down. They seem to think that they are the only ones entitled to a square deal. The man who works with his hands has a right to say when investing his energy that he is entitled to a fair price for it, because the real thought underlying the action of the workingman is that enunciated by Robert Burns. Roseberry said that the finest thing Burns had ever written was this:

"To mak' a happy fireside clime
To weans and wife,
That's the true pathos and sublime
Of human life."

We realize that this is the ideal of the workingman. He wants to put a roof above his head and put clothes on the backs of his children and give them an opportunity to make their way in the world. He is human; he has the same impulses we have; and ambition is coursing through the veins of his children as in the veins of the children of other men. Because of this he has the right to ask for a square deal, a little time to rest, a little time to work, a little time to meet the obligations of citizenship.

If we recognize this ambition of the workingman and put our stamp of approval upon it, we will say to him: "You have the right to ask for a square deal; to ask for an honest return for honest labour." But there is another side to it. That workingman, if he is an honest man, will give a square deal to his employer.

I may say from my intimate acquaintance with this work that I have been impressed with the fairness of the workingman. I think Mr. Ching put his finger upon the salient point when he said that 98 per cent of the workingmen, if they know the facts, will deal in a reasonable and fair way. That is one reason why we must be absolutely frank and sincere. We must face the facts and not be afraid to place them before the men and ask their judgment and co-operation upon them.

In order that you may get the viewpoint of the men in connection with industrial conferences, I will read a few extracts from statements issued at different points. The statement from Ottawa is as follows:

"The employees here appreciate the interest the executive management are taking in their welfare, and the company need not have any hesitation in relying upon the loyalty of the staff."

The word comes from Montreal:

"This council appreciates the many manifestations shown by the company for the welfare of its employees, and particularly through their insurance, sickness, pension and co-operative trust schemes."

The statement from St. John says:

"The unanimous feeling of the council and among the men is that something very substantial has been accomplished."

Here is the word from Ioco, and I think it is most significant:

"There could not be found better or closer relations between employers and employee than now exists between the Imperial Oil Limited and Imperial Oil employees. The Imperial Oil Company is entitled to know and to feel that they fully deserve our unqualified loyalty at all times, and that we gladly acknowledge it tangibly by our actions and conduct."

Then there is the statement from Sarnia:

"We feel that before adjourning this last meeting, we should express the appreciation of the elected delegates as to the manner in which they have conducted these meetings. You have been straightforward, fair and square in your attitude. This fact, we assure you, is fully realized in a marked degree, especially by the second-term delegates on this committee. We also wish to express our appreciation of the fair-mindedness and reasonable attitude taken by the selected delegates throughout the year. We therefore extend to you a sincere and hearty vote of thanks; and although we may not have the privilege of serving on this committee with you again, we want you to know that while in pursuance of our work with the company we are still members of this welfare committee."

There is another message from Edmonton, which indicates the same spirit.

Our councils are elected on a fifty-fifty basis, so many elected delegates and so many selected delegates, the superintendent or manager being the chairman. In Montreal we had a little adjustment to make, but it was easily made when the men were brought in and the matter discussed around the same table. While we admit that this is no panacea, we believe that psychologically we are on the right road. We are all feeling our way. I do not think that any one particular plan should be adopted, but that each director ought to form the plan according to the requirements of his work."

When I was down in the Bayway refinery I saw the manager there. In order that the men should not be called together during the hours of work—say 60 men every month—he has an executive council representing the whole council who go over matters and adjust them, and finally, when things are in shape, they are brought before the whole council. The same thing is done in Parliament, where a great deal of the work is performed by committees before being brought into the House. In this way a great deal of time is saved.

Another thing he brought to my attention was the way in which they have secured the co-operation of the women. They have a committee made up by the wives of the delegates, headed by the wife of the superintendent, and these women look after the home conditions of everyone engaged in the plant.

Another matter that was brought up was the effect that this plan was having upon the management. I think it has a very profound influence. In one of the plants of the Standard Oil Company there is a man with whom I was greatly impressed. He is the superintendent of a certain plant and has great native force and wonderful judgment in the handling of men. He has marked intellectual strength. When this plan was put into operation he was not particularly enthusiastic about it, but after two years of operation it has developed this man in a way that one can hardly realize—made him a stronger man.

THE CHAIRMAN (Mr. Brown): So far as I know, there is no provision for arbitration in your particular plan. May I direct attention to that or are you prepared to speak on that matter?

MR. SINCLAIR: I was greatly interested in the remarks on that phase of the question. The agreement which we have is printed and is put in the hands of each of the councils when they are organized. It is a rather lengthy document and I will not inflict it upon the conference, but among other things contained in the agreement is this statement:

"There is to be no discrimination on account of membership or non membership in any church, society, fraternity, or union."
Then, as to the right of appeal:

"Any employee who feels that he has been unjustly treated or subjected to unfair conditions, has the right of appeal to the general superintendent and the higher officials of the company, provided he shall first seek to have the matter adjusted by conference, in person or through his regularly elected representative, with the foreman or superintendent of his department. Before such appeal shall be taken to any official not located at the plant, it shall be first considered in a joint conference composed of the employees' representatives in the division affected and an equal number of representatives of the company. In case such conference fails to agree unanimously as to a fair adjustment, an appeal may be made to the executive council at the works; or, in case such a council has not been organized, to a conference composed of all the employees' representatives at the works, together with an equal number of the company's representatives."

MR. WINTER: You have councils distributed pretty well all over the country in very much the same way as the Bell Telephone Company has them. Is there any way in which the different councils communicate with each other? Do you have any annual meeting of the representatives of the different councils or anything of that kind, in order that they may become acquainted?

MR. SINCLAIR: We have no general meeting except, of course, of the officials. The heads of the councils come together more or less, and we have an annual meeting of the chief clerks.

MR. MACLACHLAN: I took it from one of your remarks that there was a tendency to cut down the number of meetings in one of your factories; that is, to cut away from your council meetings and to have an executive meeting instead. Have you found generally that your superintendents feel that monthly meetings are giving too much attention to this subject, and that meetings three or four times a year would meet the situation?

MR. SINCLAIR: No. In marketing divisions the councils meet once every three months. For instance, in the Hamilton plant, things were running so smoothly that last year there was not a ripple, and it did not seem advisable to call the men together every month.

Remarks of Mr. F. A. Acland, Deputy Minister of Labour.

You have already heard the Departmental point of view outlined, I think, by the Minister and the Chairman. You all represent individually, or perhaps even collectively, very important and varied industries. We in the Department come into touch with individual industries and difficulties, and sometimes with industry as a whole. The Minister and the Department have tried to look at the matter Dominion-wide, as it were, and now that the International Labour Office has been established, we have to consider even the international point of view. We do not look, as Mr. Sinclair has said, for anything in the nature of a panacea. I do not think there will be any final conclusion to any of these matters; but that is no reason why we should not look for the best means of getting along. We are at a time when changes, I think, are more rapid than perhaps ever before, both industrial and otherwise. A slight change in Europe determines the fate of countries, and affects countries in all parts of the world. The invasion of Belgium changed the nature of the industries of this country and the United States, and we all know the result. We are not yet through with that result; it is having its effect on industries to-day; but the more rapid these changes are the more necessary it is for us to endeavour to keep abreast of the times.

We may not have a panacea, but at least we can have something that effects amelioration and tends to betterment and improvement. I do not know that I can put the situation in that respect more clearly than it has been put—I am quoting it, not for the first time, because I think the sentiments are so fine that they cannot be repeated too frequently and perhaps some of the Americans present will not object to me quoting the American philosopher, Emerson, who said: "The destiny of organized nature is amelioration. It is for man to tame the chaos. On every side while he lives to scatter the seeds of science and of song, so that climate, corn, animals, men, may be milder, and the germs of love and benefit may be fruitful and multiply." That is the sum and substance of the philosophy to which he gave vent, and I think you could not have anything finer than that embodied in all the efforts that are made to better and improve relations between employers and workmen.

**Address of Mr. H. H. Stedman, Superintendent, Swift Canadian Co.,
Toronto, Ontario.**

Mr. Chairman and gentlemen: We started the Industrial Relations Committee in our plant about 18 months ago. Before starting it, we looked into several different plans and I think as far as the work of the committee is concerned our plan pretty well follows along lines described by others around the table.

We found early in the life of the committee that it was necessary to get the full co-operation of the foremen as they were afraid that some of their authority

was being taken away from them. In order to educate our foremen, we had an educational course for them, which has to a great extent overcome their opposition.

As far as the workmen are concerned, I think their spirit is much better since the committee has been formed. I believe they feel that the Company wants to be fair with them and that the ultimate results will be satisfactory.

Think the important thing is to get the facts before the workmen.

Address of Mr. J. H. Coffey, Jr., Factory Manager, Gutta Percha and Rubber, Limited, Toronto.

Mr. Chairman and gentlemen, there are certain features of our council plan which may interest you.

I have heard several speakers describe their council plan, but I have not heard anyone refer to the inception of it and how the idea was fostered. It might be as well for me to briefly review our situation, which must be unusual, because no one here seems to have had a similar experience.

It was a little more than two and a half years ago when we first heard the expression of a desire on the part of employees for closer relationship with the management in the discussion of mutual problems. Our plant, by the way, is a privately-owned company employing about 1,300 workers, and there has always been considerable sentiment and personal feeling between the owners of the industry and the staff. There was a very strong feeling on the part of the employees that they would like to take a greater interest in the affairs of the company, and some of the old employees spoke of the early days of the industry when the management knew every fellow-worker personally. But as time passed and the plant grew, the old relationship changed, as might be expected. It was an effort on the part of the workmen to revive that spirit. I was glad to see that spirit abroad, but at the same time it was under rather peculiar circumstances that were not exactly auspicious, because our employees suggested that some form of profit-sharing might be established, and all of us who remember the sentiments so freely expressed during the latter days of the war period, about the possibilities of the era of industrial peace, will appreciate the circumstance. A committee was appointed to talk over the situation, and finally concluded that profit-sharing was not an unmixed blessing, because it ought logically to involve loss-sharing, and the suggestion was abandoned.

Out of the contact that was thus established grew the idea of continuing conferences to discuss any grievances that might arise. In other words, to begin with our committee was merely a grievance committee, and during the first few months did not meet at definite periods but only as occasions arose. As time went on and we met regularly and got to know each other better, it was suggested that the scheme could be put on a reasonably definite basis, and long before we considered the question of a constitution, we outlined the work of the committee and suggested the election of representatives. The employees elected their men and formed a committee which met with the management representatives, and we discussed problems from time to time.

I remember very well that at our final meeting in 1919 it was suggested that the plan of meeting was a good one, but that the contact established, like all such contacts, was capable of some improvement. We decided to improve the contact, and to that end a committee was appointed, consisting of two members of the employees and one from the management. I happened to be the management representative. This committee was commissioned to study all forms of employee representation and to bring in a report and submit a constitution. After a study of all the information they could get on the subject, which took consider-

able time, the committee drafted a report, and in April, 1920, we started on our real factory council plan in accordance with a definite constitution.

We tackled the thing in probably a little different way from a good many concerns; we took the stand that the employees in the plant had a right to decide for themselves just how they should be represented on the council, and their own method of procedure. First of all, we drafted a constitution of a general factory committee. We have a general factory committee, having one representative for each 100 employees. In any sections where there are less than 100 employees they elect a representative. In that way we got representation from all parts of the plant. We have in certain cases one representative for 20 employees, but in the case of large departments, like our footwear department, we have one for each 100.

The representatives so elected meet each month, and the object of the general factory committee is: "To promote and foster the social and economic welfare of the factory employees of the company, and to encourage the closest co-operation of the employees with the management on all matters of mutual interest." Frankly, what we now have is a Company union. The factory committee is operated entirely by the employees. They have their own chairman, their own secretary and their officers, and out of that general factory committee are selected five representatives to meet five representatives of the management, thus constituting the council which meets each month.

We have worked under this constitution for almost one year, and while I am quite optimistic, at the same time I fully realize that the testing time for councils is about here. We are on the downward grade; it is the reverse side of the cycle; and just what is going to happen eventually, I do not know. I have reasonable confidence, but I do not feel that one can prophesy.

The best feature of the factory council idea is that it establishes contact, and where there is contact there is the possibility of understanding and mutual confidence, which is the basis of right human relationship.

The council consider all matters pertaining to the workmen—social, economic, and welfare—and to me the finest thing about the plan is that the employees have an opportunity of getting in touch with the management and definitely voicing their sentiments on any matters. The most cheering thing of all is the number of questions settled without reference to council. After all, is not that what we are after? The idea that in each sub-section of the plant the man in charge will be so imbued with the idea of the personal touch that he, acting as the direct representative of the management, adjusts the differences in his department. In other words, what we are trying to do is to get back to the old idea of one man being in close enough contact with a group of men that he can give them his point of view and in turn gain theirs.

In case there is a misunderstanding, or grievance, or some matter to be discussed, the rule of procedure is that the matter must first be referred to the man's immediate superior. This can be done by the man himself or by the representative in that department. If the superior does not make a satisfactory adjustment, the matter is referred to the secretaries of the Council. We have two secretaries; one, the general secretary of the factory committee, who acts for the employees, and the other for the management side of the council. These two receive the notice of the complaint. The management's secretary refers the question to the superintendent of the department where the man is employed, and it is up to him to make an adjustment. If the foreman cannot settle the question, and the superintendent cannot settle it, then it is referred to council—and there are not very many matters that have to be settled by council. We proceed upon the principle that the management must be responsible for the differences

in their section or sub-section, and it is up to them to make whatever adjustments are necessary to satisfactorily settle the problem on the spot.

On the other hand, the council have taken action in many matters and they have done good work. I am thoroughly optimistic about the future. I agree with what Mr. Ching has said about the men, if they know the facts. I could cite instances in which the employees' side have considered matters just as carefully and intelligently as the management would, if they were considering them. That is a pretty good evidence of the level-headedness of the average man, and I hope and trust that when we have to consider the reverse side of the industrial cycle the same balanced judgment will prevail.

I might mention that our Company have always taken the stand—perhaps that is the reason why they held the confidence of the men to a very great extent—that there is to be no discrimination whether a man is a member of a Union, a Mason, or no matter what order or lodge he may belong to. We care not what party affiliations they have, and we feel that in the last analysis the Company and the employees have got to get together. One reason why we studiously left out the question of arbitration was because we did not want to even hint that we could not compose our own differences without outside help. That may be a weak point or a strong one; it is a question of point of view or of feelings, not facts. We favour the idea of settling our own differences in our own organization and not referring them to anyone outside.

Address of Mr. W. H. Winter, General Superintendent of Plant, Bell Telephone Company of Canada, Montreal.

Mr. Chairman and gentlemen, I appreciate the opportunity to speak in favour of joint industrial or plant councils.

The question of employees' councils has been a very live one with us, and I would like to endorse many of the things that have been said by other gentlemen in conference here today. As a matter of fact, we got the idea of organizing councils from the American Telegraph and Telephone Company in the latter part of 1918. In the early part of 1919 we concluded we would try to put across the proposition with our supervising staff. We had the experience that many others have had—that, owing to the old school being dominant many supervisors did not take to it kindly. Some of our officials absolutely talked it down with the result that we had to let it go by at that time, believing that unless we had the co-operation of the supervising officials we could not do very much with employees' councils.

Later on, during the summer of 1919, we put the proposition before our employees at meetings held in the various centres where we operate. The employees took to it much more readily than the supervising officials had done; in fact, it was practically unanimous in every case that councils should get organized in the plant department.

We did not go very deeply into the question of a constitution. A draft agreement was submitted to three of our largest bodies of employees, with the request that they make additions and changes to suit themselves. The result was the agreement we have with approximately 45 different plant councils.

The objects of the plant councils are "To provide a means whereby employees may crystalize and present their views collectively to the management with respect to wages and working conditions, through channels supplementary to the existing organization;" and "To provide the management a means

whereby it may better know the preferences and appreciate the points of view of the employees working under supervision."

We have found that plant councils do a great deal more than is set out. They have undertaken to go considerably further than simply wages and working conditions, and the management has been able to obtain a great many good points from the employees. The membership qualification is three months' employment with the company, and for employees' representatives on the committee the qualification is one year's employment. There are no membership fees to the plant council and the company pays any expenses incidental to operating it. The plant council is made up of the plant employees in an area who are regularly proposed and elected. An area sometimes covers considerable territory, and at other times only a city. Regular meetings are held once a month; but the plant council may decide by resolution to call off a couple of meetings in the summer months, and we have no objection to that. The rule is that a week after the regular council meeting of the employees—which is held on their own time, usually in the evening—the representatives and management committee meet and bring up any matters they wish for discussion.

In the early days we had experiences similar to those mentioned by some of the other gentlemen. The representatives were more or less of a grievance committee. This company had been in operation for almost forty years without any organization, and without any troubles to speak of, but there were a few grievances that had to be straightened out. As a rule they were trifling matters, some rule not understood or necessary or that some supervisor had inaugurated, which were a cause of irritation. The result is now that the joint meetings have become a constructive function for the benefit of the service, and when there is nothing to bring up by either representatives, we have so arranged it that one of the members of the management committee would give a talk on some subject so that the committee will not lose interest in the meetings.

We think that the meetings should take place regularly, that they should never be missed and that it is the duty of the company to see that there is something of interest brought up. That system has worked out very satisfactorily. In addition, at the regular council meetings during the winter months, after the council have finished their meeting with closed doors, the officials of the company, both of the plant and other departments have been invited and arranged to give talks on various subjects pertaining to the business. This has been of great benefit to the *esprit de corps* of the employees.

One of the main things we have found about plant councils is that we have got to give reasons and not excuses when we cannot meet the wishes of the employees; and that even if we have to give a negative decision we must be honest and tell the truth about the matter.

We have councils for the plant department and exchange committees for the operators and we also have committees for the larger accounting and commercial offices. They are all worked out on pretty much the same plan as the plant councils, except that the latter are purely committees and do not have the same organization as the councils. We have got to the stage now where the councils are carrying on constructive work. During the last eight or nine months the Company decided, as they were going to go to the public to ask for increased telephone rates, that it would be a good idea to get our 13,000 employees busy to help boost the business along. The plant councils have been a great factor in moulding public opinion in regard to the Telephone Company. In some places, of course, the people think yet that the Telephone Company is a

sort of monster; but nevertheless we find that throughout the country the work of bettering public relations which we put into the hands of our employees has undoubtedly done a great deal of good. There is just one instance that I may mention. Our plant councils in Montreal and Toronto volunteered their services as guides in order that subscribers could visit the exchanges; and in those two cities over ten thousand people visited the exchanges in one week. The members of the plant councils gave their time free and conducted the people around the exchanges. That is one of the particularly good jobs done by our plant councils.

In addition, many of our officials have on invitation of the plant councils given them talks. This was something never known of in the company before, because we were one of the conservative companies that ran along as a happy family. But times have changed, and we find today that it is very necessary for the supervising officers to get in closer touch with the employees. Years ago a superintendent of course knew everybody in his department. Today that is impossible, but nevertheless there is a great chance for doing good by keeping in touch with the employees through the council meeting talks.

One of our great difficulties of course has been to get our lower-supervising officers properly educated in this matter of employees' representation. This is a difficulty which is hard to overcome, but we are getting there gradually, and we believe it will eventually work out satisfactorily.

The time is coming now when the Telephone Company, like every manufacturing company, has got to produce for less than the present cost of production. Naturally, like all the rest of the employers of labour, we do not like to consider a reduction of wages if it is possible to carry on in any other way. But the plant councils and their committees have been fair when wages were going up, and we believe that they will be fair when if necessary the wages have to be lowered.

We are finding out that the employees want to know more about the company; they want to know about the balance sheets and the costs in their different areas. A few years ago nobody seemed to care what things cost; but today, even in the isolated areas, the employees are anxious to know what things cost.

Of course the average length of service of our employees is very high, and our labour turn-over in the past has been comparatively low. Under those circumstances we expect that we will be able to talk to our people, and that they will look at the conclusions which may have to be come to in the near future in a spirit at least of fairness to the company and to the public.

In the city of Toronto, in the spring of 1919, our staff was very largely organized, but regardless of that, at a meeting of about 400 employees, they voted in favour of plant councils. The President of the Council made the statement that it did not in any way affect their status in unions.

I have nothing else to say except that I think this is one of the things that will save the situation at the present time, and I am heart and soul with this movement. As Mr. Coffey has said, the closer you can get to your people the better you will come out in the end, and while this is not going to clear up all our difficulties, still we have gone a long way towards that end.

MR. MACLACHLAN: Mr. Winter, I was not quite clear whether the representatives were paid or whether they met on their own time. Perhaps you could clear that up. There is another thing: no doubt you have to bring men some distance to these meetings. Are their expenses paid or not? Another

point—although I am not a representative of a public utility, I am in touch with many of them, and I would like to know how this scheme works out, as to linemen.

MR. WINTER: The plant council meeting is held on the men's own time; the employees' representatives and the management committee meet on the Company's time. The Company permit men located from area headquarters to attend the plant council meetings at the Company's expense. In so far as linemen are concerned, we have not provided in our organization for special councils for special classes of employees. Each class of employees in the area elect by ballot their representatives to the committee of employees' representatives. It is a combination committee made up of representatives of the different classes. The number ordinarily is restricted to 7; but in Toronto and Montreal, where there are a larger number of classes of employees, by resolution they changed the number to 10.

Remarks of Mr. F. J. Gernandt, General Superintendent, International Harvester Company of Canada, Ltd., Hamilton.

MR. CHAIRMAN: We have at the Hamilton works of the International Harvester Co., a council which was inaugurated by a large majority, and almost everybody feels satisfied with it. We have our committees, one-half employee representatives and one-half management representatives that look after matters under their jurisdiction around the plant. Lately we have had to relieve some men and we have always made adjustments through the plan. In some cases the men feel that they are not told enough about these matters, and I don't know but what they are right. Whenever a difficult situation arises the Secretary tells us about them and we straighten them out as soon as possible. Some of our men are not hardened politicians, and do not like the criticisms which may be directed at them and do not like the remarks of their constituents, and this makes it pretty difficult for the Secretary, who has to keep encouraging and pointing out the proper procedure.

Our foremen and assistant foremen, like those mentioned by Mr. Winters, need enlightening. We are trying to do as much as we can in this way, and we believe that if we could get the message across to everybody that would be almost the end of our job.

Last Thursday at the council meeting I had occasion to ask the meeting to consider lowering our common labour rate minimum from 45 cents to 40 cents. I explained the reason for it, that the condition of the business really meant that the local management would be criticized if we were paying more for common labour than our competitors. After going over the ground it was reluctantly concluded it was the only thing to do. Like other members of the conference, I feel that if there is a thorough understanding of the facts by both sides there will be no difficulty in arriving at a solution of most of the problems we have to face.

Address of Mr. F. T. Day, Secretary of the Hamilton Harvester Industrial Council, International Harvester Company of Canada, Limited.

MR. CHAIRMAN: The employees of Hamilton Harvester Works number about 2,000, and for election purposes the plant is divided into eight voting divisions. From each division an employee representative is elected, by secret ballot, and to illustrate the interest taken in the Council plan at our works, I can say that at the last election, held in December, there were more candidates and a larger vote was polled than when the plan was inaugurated in March, 1919.

The management representatives are appointed by the Superintendent and usually consist of department heads and foremen.

At present our employee representatives are composed, I think, of six Union and two unorganized workers. These meet at least once a month separately before the regular monthly council meeting to discuss matters and all look forward to that event with much interest.

It is our practise to furnish all Council Members with "an order of business" sheet at least three days before the council meets, that they may know just what business will be brought up and any matter not on the regular order of business must be, and frequently is, discussed informally.

When any suggestion or complaint is presented, it is my business to see that it has first been put through the proper channels; that is, presented to the foremen or superintendent for adjustment before it can be brought up in council, and it is seldom that any such matter is not adjusted by foremen or superintendent. I have found the men fair and have never had any real difficulty with them. In any fair proportion that has been made we have had their co-operation and there has not been any approach to a strike since the council was inaugurated at Hamilton Works. It is true that many complaints have been made, for which there was no cause, but when explanation was made the employee representatives were satisfied and adjusted the matter with their constituents.

When asked their opinion of the council plan, as we have it, both employee representatives and many workmen have stated that the plan is capable of great possibilities. Our men are familiar with other plans and when asked if they knew of anything that would improve the plan as it is, replied in the negative.

Hundreds of suggestions have been made to better safety, sanitary and working conditions, which have been accepted and adopted, and also, a number that have meant a real saving in many cases. I particularly recall one case, of an employee representative, who is a chipper in our Grey Iron Mill; he had a great deal of difficulty owing to some fault in moulding, in getting out enough castings to make a day's pay and went direct to the foreman and workmen and pointed out where the trouble lay and suggested a remedy and the difficulty ended right there. Others have pointed out where sizes of stock more suitable for the work in hand could be used and a saving made that way.

Individual adjustments of day and piece work rates downwards were recently made and there was dissatisfaction on the part of the employee representatives for the reason that they felt they should have been consulted fully before such action was taken, but it was not hard to show them that as they were not consulted when individual advances were made they should not object to a revision downwards when conditions warranted.

Our council men are paid for time spent on council business, but they have met a number of times and adjusted complaints among themselves without cost to the Company. They also spend a great deal of time after working hours for which they receive nothing, visiting the sick of their divisions, a list of whom is furnished twice each week. They have also been active in inducing workmen to join our Employees' Benefit Association and have been instrumental in bringing up the membership to about 85 per cent of the total roll. Ways and means for increasing production are frequently discussed at council meetings. Several good suggestions for eliminating waste have been put forward, and many ideas brought out that have effected real savings to the Company. Each of our employee representatives has the privilege of appointing a deputy to assist in his work, as he often functions in half a dozen departments. The deputy assistants are little cost to the company.

Our council does not meet as opposing bodies, that is, management representatives on one side and employee representatives on the other side of the table, but sit alternately side by side and are very friendly.

The workmen's representatives suggested inviting foremen and other employees to council meetings and this is a great deal to spread the council idea in our works. I will cite an incident. Last Thursday we asked in a man who openly ridiculed the council, stating that it was a joke and that the workmen's representatives really had nothing to say. When I asked him the following day what he thought of the meeting, he said: "I had no idea that it worked out the way it does and after the frank and free discussion which I heard, and seeing the open manner in which business is conducted, and especially after witnessing the efforts of the employee representatives to protect the men in the matter of reduction of common labour rate from 45 to 40 cents per hour, I am sold to the council idea and hereafter will do all I can to help the good work."

THE MINISTER OF LABOUR: How often do your elections take place?

MR. DAY: Every six months.

THE MINISTER OF LABOUR: Are the representatives eligible for re-election?

MR. DAY: Oh, yes.

THE MINISTER OF LABOUR: How many have been re-elected?

MR. DAY: Six out of eight were re-elected, some of them by acclamation.

THE CHAIRMAN (Mr. Brown): Mr. Reilly, you have been listening throughout the discussion. You are interested in this subject from the point of view of building and construction, a somewhat different interest from the factory point of view which has been presented in the discussion and we would be glad to hear from you as to your experience with joint councils as established in Ottawa, Toronto, Hamilton, and London.

Address of Mr. J. Clarke Reilly, Secretary, Association of Canadian Building and Construction Industries, Ottawa.

Mr. Chairman, and Gentlemen, The building branch of the construction industry is in quite a different position to the industries that you have been speaking about. It is different, in the first place, because ours is largely a seasonal occupation. Most of our work is done in the summer months, though a certain amount of construction work goes on through the winter. We are not in the same position as you gentlemen in another respect. In most of the plants referred to by the previous speakers, the employers were the ones who were organized. You have referred to some extent to Unions among your employees, but they seem to be almost a negligible quantity. With us, it is the other way about, the employers are very poorly organized, and the employees, especially in the skilled trades, are very highly organized, and represent a great proportion of the men who work for us.

Our work in connection with Joint Industrial Councils is of a recent nature. You heard this morning from Mr. MacLachlan of the inception of the council in Toronto. That Industrial Council has furnished the basis for the others which have been instituted since.

Ottawa is unique in that it has had a closed shop agreement between the local Association and the local Building Trades Council, so that the questions which were referred to the Industrial Board have been of jurisdiction between one trade and another, questions of difficulty between a foreman and workman, questions raised by employer against workmen, and in some cases, the decisions given have been against the employer.

In Hamilton, an Industrial Board was formed in the building industry last year, which has had only one important question to deal with, but in that case the result was quite satisfactory.

In London, there is a Joint Industrial Board which has been doing good work.

There is one feature which I would like to speak about. As a result of our Annual Conference a year ago, we appointed a Standing Committee on Labour. This Committee had a meeting at Hamilton in May last with representatives of the International Unions in the Building Trades, and as a result we decided to inaugurate a National Joint Conference Board, which would have equal representation from our Association and the International Unions. Meetings are held once every three months, and while the Board has not endeavoured to be a court of appeal from the local Boards, still it has taken up questions of national importance, and has acted in an advisory capacity. The Chairman, Mr. Quirk, is appointed by the Department of Labour.

This National Joint Conference Board has discussed questions ranging from housing to conditions of employment in various centres. It is endeavouring to standardize the practices and organization for the local boards. It is now trying to get a standard agreement for apprentices in our industry, which we feel is a very important work. I think this National Board has been a successful experiment, and as it goes on, there will be found many new lines on which it will be able to work.

The idea of conference between employer and the employees has been gaining ground, and it is significant that men will travel two or three hundred miles at their own expense, and spend a day or day and a half of their time in order to attend these meetings and discuss questions with the representatives of the employees. The benefits that you gentlemen have found in the Joint Industrial Boards in your organizations, we hope to see duplicated in our industry along lines suited to our peculiarities of organization and working conditions.

Address of Mr. J. D. Jones, General Manager, Algoma Steel Corporation, Sault Ste. Marie, Ontario.

Mr. Chairman and Gentlemen, we have not an organized industrial council at our plant, but we do function somewhat along the lines prescribed and laid down by you gentlemen in the previous discussion. We function through several departments or committees, one of which, called the Allied Relief Committee, is about as old as the plant, or 20 years old, and which up to the time the plant started to grow took care of pretty nearly everything.

In 1918 we organized what is called our Welfare Board. This Board looks after the question of safety from the employees' standpoint; it operates a club, handles a plant paper, runs our plant restaurant, and has jurisdiction over the recreation and education committees. It is a responsible institution, and it is up to it to operate things and not to run into the hole and then come to us for help.

In addition to this we have a Plant Committee, which has no other jurisdiction than to discuss wages, hours and working conditions. Then we have divisional or departmental committees which, in a sense, are grievance committees, and look after the matters that may arise in their departments.

It may be interesting to note that our Plant Committee has met the management twice in the last ten months—once last April when we called them in to discuss an increase in wages, and once in January of this year when they were called in to discuss a decrease in wages. Some of the gentlemen around the table here have expressed a fear that perhaps their plant councils will not function when it come to the question of a decrease in wages. I may assure them that we worked that question out all right, and we did it along the lines mentioned by Mr. Ching, Mr. Sinclair, and others. We were very frank with the committee and told them exactly what the situation was with respect to the market and the

going price of steel, and we worked out very carefully for them the relation of wages to the producing cost of steel in connection with other factories, and put it up to them in a straightforward businesslike manner just as we would to the board of directors, and they were very agreeable to it. We were almost two weeks before we put into effect the reduction, which was seventeen and six-tenths per cent, and over 90 per cent of our employees were satisfied.

Another question that was raised while we were organizing the plant committees or industrial councils was whether agitators would not start trouble, and whether we would not actually become a closed shop. We do not care whether there are agitators on the committee or not. We let them come in with the rest of the boys and we present to them cold hard facts, and they have to stretch things pretty far before their co-workers will be carried away.

In analyzing conditions—and we are working with the idea of co-ordinating these committees and establishing a plant council—we have found the big stumbling block to be our foremen. It does not make much difference what I or the manager may desire to have done or what our general superintendent or department heads may want to have done. We may discuss something in council and agree on it, but after all it gets into the hands of the foreman in the shape of an order, and he is the fellow who has got to do it. We have spent a year or more in weeding out incompetent foremen and in checking up others who were indifferent, and educating other men for the position of foremen. We are just now commencing to get the results, and we hope that within the next few months we will be able to put into execution this organized plant council; but we do not want to proceed before we are sure that everybody from the manager to the water-boy is thoroughly educated to the nature of it.

Tuesday, February 22nd, 1921.

THE CHAIRMAN (Mr. Brown): Yesterday afternoon the speakers followed around the table one by one, and I think this morning we will all be interested in hearing what Mr. Olzendam has to say as to what the Spanish River Pulp & Paper Co., is doing in this regard.

Address of Mr. R. M. Olzendam, Secretary, Department of Industrial Relations, Spanish River Pulp and Paper Mills, Limited, Sault Ste. Marie, Ont.

Mr. Chairman and Gentlemen, I wish to express to Senator Robertson my great appreciation of the invitation to be here today. It was the pleasure of the Spanish River Co., on the 8th of January this year to have Senator Robertson present at the annual President's Banquet, and anything the Company can do to assist him in his work will be only too gladly done, because the talk he gave our men at the banquet set everybody in the mills and offices thinking along new lines.

I was very glad to be here yesterday and to hear of the various experiences of the gentlemen present. I fear that I have not a great deal to add to what has already been said—all I can do is to tell you of our experiences to date. We feel that we are at the present time merely on the fringe of the question. We have instituted a number of plans among our employees, but we have not yet arrived at the point which has been reached by many of you gentlemen—that is we have not industrial councils operating in our plants.

We have approximately 7,000 employees in the mills and in the woods. It is a very difficult thing, as you probably can imagine, to start what we might call industrial relationship plans in the woods department. We wanted to make sure that whatever moves we made were well grounded, and therefore we have gone with a great deal more caution than perhaps some other companies have.

We have gone slowly in an effort to bring all the facts as we saw them before the majority of our employees. To begin with—which probably is different from any companies represented here today—all our employees organized under two unions; the International Brotherhood of Pulp and Sulphide Workers and the International Brotherhood of Paper-makers. The company recognizes both these unions and has working agreements with them lasting a year and covering wages and working conditions. Therefore, I believe, our problem is different from that of any of you gentlemen.

Of course, one plan might work in Spanish River which would certainly create chaos in the United States Rubber or some other company, and our experience is purely within the Spanish River Pulp & Paper Co.—and if we can solve our own problems and promote harmony and good fellowship in our organization that is all we can hope to do. And if every gentleman here would do the same within his company we would not have any labour troubles or strikes or anything else of that kind. That is the theory upon which we are working.

Mr. Mead, the President of the company, made a statement at our banquet this year which seems to embody the thought we are all after, and with your permission I will read what he said: "The management of the company feels that the more closely we can become associated with the men upon whom we depend for our daily operations, the more fully we can inform these men of what we are attempting, and the more intimately they know the thoughts of the Executive and the Directors and the Managers of our various departments, the better we can all in co-operation accomplish that which is desired by the people who have entrusted to us the money invested in our several plants." That is the basis on which we work, and we believe that is sound.

To start with, our theory is that the management must be the beginning of all things. The men who compose the management must be imbued with the desire to create within the organization that certain indefinable something that we call company spirit. Unless a majority of the management instinctively have the desire to do that all plans are bound not to succeed.

We publish every week a plant paper known as the Spanish River News. We started this about two and a half years ago, and had great difficulty in getting the men to even contribute enough material to make it an 8-page edition. Today we have a great deal of difficulty in crowding all the material which the men send us into 24 to 40 pages per week. Recently, for economical reasons, we have cut down the paper to every other week, which makes it next to impossible to publish all the material sent in. That comes from all classes of men within our plant, and the material which they send in is increasingly constructive and useful. We find that there is no better medium to express to our employees the desires of the management, and for the employees to express their desires to the management than through the columns of our paper.

Two years ago we started a series of editorials, and decided to base these upon a statement of the President. When he said: "The operating policy of this company is to organize through spirit and enthusiasm to the point of maximum efficiency," we took that sentence and tried to develop it in a series of editorials which appeared upon the second page of the paper. We gradually got the men to realize that if they would open their plant paper and turn to the second page they would find something there that was really for them. Now we know that when a man gets his paper the first thing he does is to turn to the second page, because we make a point of putting something that he is after on that page. We developed this idea and went on to show that it was just common, ordinary, every-day stable thinking, as someone said yesterday—horse sense—and we stated these principles as simply as we could.

This went on for about a year. Then we embodied these editorials in a small booklet called, "What Spanish River Stands For." The Manager of Manufacturing wrote a letter to all the employees of the mills and the Manager of the Woods Department wrote a similar letter to the woods employees. These booklets were given out to the employees with the pay cheques. We wanted to make sure that the men understood the policy of the company first; then we decided to follow that up with a small book on plant councils.

The Department of Industrial Relations of our Company made an investigation in the United States and Canada and Great Britain of various plant councils, in order to get at the meat of the subject, and the result of their investigations was also published with a letter from the manager, and given out to each of the employees. We were looking, of course, all the time to the establishment of industrial councils, which we believe will bring together in one group all the matters which concern the relations of the men to the company.

We did not want to put this plan into operation until we were absolutely convinced that the majority of our employees, both in the office and in the mills, really wanted an industrial council. We realized that some companies had put councils into effect because they felt that certain difficulties were impending, and that if a council was in operation it might ward off some of those difficulties. We had no difficulties to ward off; therefore, we could proceed with education, and slowly. The manager of the company might have said to the superintendents: "We are going to put into operation an industrial council and we want you to back it up." And they would probably have said: "All right we will do it." But that is, you might say, a bit autocratic. He could say: "We are going to do it now. Come on." Or he could say: "We desire to do it, but don't want to do it until you are all convinced that it is a good thing." That is our whole theory. We have not councils today.

As I said in the beginning, we feel that we are merely on the fringe of the problem. If our employees change from week to week and month to month and our labour turn-over is very high, we cannot expect to put into operation certain plans which must have the backing of the older employees—that is those men who really think—so we must first of all build up a group of men who understand the policies of the company; and that cannot be done over night.

Some people think that kind of thing can be done in a very brief time; but to take a group of reactionary men—not that they are all reactionary, but there are a number of men today who have been brought up in the old school and who do not desire to see any change—and to expect to change them over night is too much. It can only be done by the process of education. The ideas of the President must filter through to the very lowest sub-foreman, because, to the men, he is the company.

You, of course, have all heard organized labour leaders say that if you give the men an opportunity to express themselves and show what really is in their heads, they will do it. Going on that theory we decided that if we were to have plant councils—which is the ultimate as far as our present plan is concerned—then the men should certainly be able to handle simple things such as a voluntary relief association or safety or first aid. So we started them on the ABC of this. We have a first aid equipment and corps—and in one mill it is going better than in another—and I am very much in hopes that in the course of the next year we will be able to put the thing on a very firm and lasting basis.

Of course, a Christmas present is a good thing, we believe; therefore we give the employees a Christmas present of a day's pay for Christmas day plus \$2.00 for every year they have been with the company—and that is appreciated.

Each year we have the President's annual banquet, which I believe, is the greatest event for the men in the Spanish River calendar. We asked the employees in each plant to elect from their own number a certain number of men—in one mill 21, in another 16, and in a third mill 14—based upon the number of men in the plant. These men, when they are elected by a vote, elect from their number a speaker. That speaker is assigned a subject which works in with the general plan of the banquet. These men come to the banquet at the expense of the company. As I said, this year we had the honour of having Senator Robertson as our chief speaker. Mr. Mead presided at the banquet. These speakers from the three mills are expected to represent the views of the men in their respective mills. This year the speeches made by these men were first read to a mass meeting of the men, and approved by them, before they were delivered at the banquet. In that way we know exactly how the employees feel. It is a great feed, and they have lots of songs. The fellows write parodies, and we have an orchestra and a song leader, and they enter into the spirit of the occasion with a great deal of enthusiasm. We believe the banquet is very much worth while in binding together all departments from the management down—the sales end the woods department, and the operation.

We believe that simplicity in these plans is really essential, and that the more simple they are the more workable they will be. Our outline for industrial councils has been worked out to fit entirely with the men. They have made their suggestions. We do not propose to put this into operation until it is exactly as they all want it to be. It must be approved by the manager and then by the men, and we want them to have just as much voice in it as we have. I believe it is going to work out.

As I said in the beginning, we have labour agreements covering wages and grievances, hence the questions of wages and grievances will probably never come up in the industrial council. They would be worked out with the regular committees of the unions and the International officers. The matters, therefore, that would come up before the industrial council would be more constructive matters. I know that if I thought the council were merely for the purpose of settling such matters, and that we were to scrap over little points that do not mean anything, I would not be as enthusiastic as I am. I believe that if we handle these matters of wages and hours and working conditions as we always have handled them, and turn our councils into constructive bodies, we will really get more of what is in the minds of the workers.

I will just give you an idea of some of the subjects that might be dealt with—this, of course, is in anticipation; this is all theory—we put first the desire to improve production; then there are working conditions, employees' safety, education, health and recreation. We believe that through these councils we are going to get ideas from the men as to the improvement of production; and our councils, we hope, will be taken up with the discussion of these things which have to do with the operation of the business. We have planned for each council meeting in each mill. For instance, next week at the Sturgeon Falls mill the hydraulic engineer will give a talk on hydraulic engineering in as simple language as possible, showing the men the plans of the company as regards water-power. The next week at Espanola the cost engineer will give a talk on costs. At our Soo mill the following week the assistant to the manager commercially will give a talk on the simple details of running the manager's office. We start very simply, with something they can understand. This would provide for each monthly meeting of the council. That is the plan upon which we will work when the employees have decided that they want to go ahead with the council idea.

I am convinced that the majority of our men are ready to proceed at any time we are ready. There is, however, one of our mills in which the employees

have told us that they are not ready to proceed; therefore we must go ahead and give these men further information.

I believe I have covered the general idea of the Spanish River Pulp & Paper Mills with regard to our preliminary work in relation to industrial councils.

THE CHAIRMAN (Mr. Brown): Is there any question that any one would like to ask arising out of Mr. Olzendam's address?

MR. STEVENSON: I should like to find out if the Spanish River Co. have had any expression of opinion from the unions with whom they do business as to the formation of these councils. Has there been any opposition, or do you anticipate any difficulty in that line?

MR. OLZENDAM: We went into that matter very carefully because we wanted to make sure there would be no obstacles in the way of the councils. Therefore we have seen personally the Presidents of the two International Unions. We discussed with them our various plans, outlining in detail everything we proposed to do, and asked what they thought, and we secured from them letters to their various orders saying that they heartily approved the Spanish River idea of councils, and desired that their men should do everything possible to advance the councils.

Discussion on the Subject of Plant Magazines etc.

THE CHAIRMAN (Mr. Brown): Mr. Olzendam has spoken at some length on the preparation of the field through the publication of material. Is there anyone who would like to speak particularly to that point? It is an important one.

MR. YOUNG: Speaking to the point of publicity, I may say that during the past year we have had a very interesting development directly attributable to the works council. At 17 of our plants we have works magazines. In each case the name of the magazine has been chosen under the direction of a committee of the works council, and a small money prize for the best name for the publication has resulted in selling the idea to the employees generally. Some of the names have a great deal of merit. At one of our wagon factories the name chosen was, "The Spoke and Tongue." At Auburn, a twine mill and tillage plant, the names "Tillage and Twine," the letters T. N. T. being emphasized. At the tractor works they have "The Tractor Interester," the last word being accentuated and coming from the name of the company. St. Paul chose the name "50-50." We originally had two magazines at Hamilton; the Hamilton Plowman and the Harvester Bulletin. About 30 per cent of the contents, never more, may be classified as propaganda. We restrict ourselves to that, and seldom exceed 20 per cent of the total. We try to make each magazine carry as much of a local punch as possible, and publish all the plant gossip we can get through the associate editors. There is in the Chicago office an editor-in-chief of all publications, and at each plant there is a local editor. Each council has a publicity committee which functions regularly in the preparation of minutes. The duty of the secretary is to get verbatim minutes and from them to prepare a brief summary. This is not verbatim, and it is not issued until it has been approved by the works committee; but in all our plants the fifty-fifty balance is preserved. Originally we distributed the works council minutes as a bulletin. We mimeographed a number of copies giving each employee representative one, or two, or three, or five copies and put them on the plant bulletin board. That method was not conducive to the widest publicity. Men would not stop long enough to go through the several pages, or at noon they

would congregate round the bulletin boards in such numbers that it was not possible for all of them to read the minutes. So, as we were anxious to get them into the hands of every employee, the plant magazines came as the natural fruit of the plan. They have been somewhat expensive. Last month our average cost of publication was 8 cents per copy, which is the cheapest month we have had, some of the individual publications for small plants having run as high as 15 or 16 cents. In the year 1920 we spent \$41,000 for the publication of our plant magazines, which is an expenditure of about one dollar per year per employee. It is not probable that the cost will go higher than that this year, although last year we did not publish plant magazines throughout the whole year at each of the plants. We feel that this expenditure is thoroughly justified, because it is a strong factor in making that point of contact between the men and the management which is lost through the introduction of big business.

We have many requests for the magazines. Some thought at first that we would find many magazines scattered about the plant or thrown away. I have repeatedly asked to have a check made of that, and we have yet to find a single copy that has been thrown away. We scale the number of our magazines very carefully with the number of employees in the plant, and we are always under-sold because many employees wish copies to send to friends or to fellows who have left the service. Our mailing list is growing, and it is getting to be quite a problem. I believe, however, that we will have authority to increase the number published, and can carry on our mailing lists men who have been laid off, and will probably come back when business becomes normal again.

I think our development has been more sound than it would have been if we had simply adopted a general company policy and started the publications without reference to the men, and particularly without provision for local and sub-departmental editors.

MR. SINCLAIR: The Imperial Oil Company are fully conscious of the importance of this matter of publicity, and are of the opinion that it affords a very successful and effective means of coming into contact with each of the employees. We have found that we are able to establish very cordial relations between the heads of departments and our employees by means of papers and publicity. In each of the councils we have two copies made of the full minutes, one remaining for the employees in the plant. This is put up in a prominent place and is read very carefully. The other copy goes to the office at Toronto, where it is gone over very carefully and is answered by a letter speaking more or less intimately and directly to the men through the superintendent. In that connection there was a request from Ioco to publish a copy of the minutes of the plant in our "Review." We felt, however, that this might not be wise, as those minutes relate to a particular council and to a certain extent are private. I have here a copy of the plant paper, the "Ioco Times" in which word is sent from the President, the vice-President, and the manager and some of the directors as well as myself, which in a very intimate way brings us into cordial relations with the men.

There is no hesitation on the part of the men in conducting this paper. They feel that it is a real bond of union between them.

Then we have what is called the "Sales Motor," which of course refers more particularly to the marketing division.

In addition to these we have what we call the "Imperial Oil Review," which I think is a very fine means of communication with our men. We have 7,400 of these printed 12 times a year. We expend about 16 cents a copy on it,

which would bring the cost up to something between \$2 and \$2.50 per year. We send this out to all our employees, and in addition we have a mailing list containing the names of the leading men of Canada to whom we send it as well.

I am finding that the "Review" is a splendid means of bringing about co-operation and of bringing to the attention of the men such matters as annuities, insurance, sickness and accident disability. I can corroborate what Mr. Young has said, that these publications are eagerly looked forward to. They are snatched up by the men, who take them home and read them, and even keep them, in that way showing their interest.

When this matter was brought to the attention of the French people in Quebec, for whom our company always has a very high respect, because we realize we are all Canadians and that if this country of ours is to arrive at that stage of development which we desire it must be through the cordial co-operation of all of us, French and English, Catholic and Protestant, labour and capital—it was decided to publish a copy in French. This plan was adopted so that they would understand that there was no nigger in the fence, and it was thought by this means we could speak to them in a very effective way. This publication brought before them intimately the outline of our plan of annuities and insurance and sickness and accident disabilities. We found that this was worth while. It was an expensive procedure and cost us a great deal of money and a good deal of work. We have a man at the head of this work who gives a great deal of his time to the carrying on of this publication; and although, as I have said, it costs a good deal of money, we feel that it is worth while, and I believe that as days go by we will realize how effective a means it is of bringing ourselves into intimate touch with the men.

MR. WINTER: Do I understand that it is the practice of the Imperial Oil Company to issue a French copy of their magazine at the same time the other one is issued?

MR. SINCLAIR: We had this one copy in which the details of the plan were fully outlined in order that the French people might understand the details of it. We thought it was worth while to print a separate copy, and if the Department would like to have it I have one here that I would like to present to them.

MR. WINTER: That is one of the very difficult questions asked by companies who have a large number of French-speaking people in their employ. The Bell Telephone Company has been considering for some time the publication of a magazine, and that is one of the points that we have thought would be very difficult to deal with, as there is not a sufficient number of French employees to warrant the publication being printed in the two languages.

MR. CHING: Mr. Chairman, speaking of printing magazines in various languages, we have a plant where there are employees of possibly 46 different nationalities. We printed some parts of plant papers in French, Italian, Portuguese and other languages. There is one place where we printed a part of our paper in Polish, one side in English and the other in Polish.

MR. JOHN R. FRYE: Would you like to know what we are doing along the lines of publicity?

THE CHAIRMAN: Yes; I think we would all be interested in a statement of your company's attitude toward publicity, Mr. Frye.

MR. FRYE: We have in our company one publication, which is known as "The Dominion." This paper is more along the lines of a house organ, and goes to the heads of departments, foremen, salesmen, etc., but does not go direct to the employees themselves. I believe that in the past history of the Con-

solidated Rubber they have had several other publications which were issued at the plants, but each one of those in turn seems to have died out. I believe in the publication of these papers, but I have had it in the back of my mind since we have gone into this industrial council work and had this planned out, that the management should not announce or go ahead with the proposition of putting out plant papers until such time as the employees or the factory council in any one plant feel the need of the factory paper. We are waiting for the time to come when the factory councils feel that they will want to get behind their own plant paper. I think that when that time comes there will be no trouble in the company coming across and helping out at the financial end.

Along the lines of publicity in the plant, notes of all of our factory council meetings are taken practically verbatim, and these are transcribed the morning after the meeting. The industrial relations man at the plant summarizes the minutes. The reports are examined by the secretary of the employees on the factory council; they are approved by the secretaries of the committee—which-ever committee happens to be reporting—one for the employees and one for the management. With regard to all of our factory council minutes I have found that at the start our management people were inclined to report the meetings more or less along the lines of a parliamentary form, but in the different plants, one after the other, we have gradually changed the line-up of the factory council minutes in such a way that they are more interesting and readable to the people in the plant. That is, we take up the proceedings by subjects, and instead of reporting on each item in a stilted manner, the record is a sort of narrative, which may be three or four lines or a dozen lines, giving the gist of what was done on that particular subject. These minutes of course are approved, as I said before, by the employees' secretary and the management secretary.

With respect to the factory council minutes and the question of a plant paper, in the line of publicity, we have found that in our factory council minutes there are a great many things which the management wish to place before the employees and which naturally would get before them in the line-up of the factory paper. These different subjects have been taken up at our different factory council meetings and reported and published through our factory council minutes. These minutes are transcribed the next day and they are run through some sort of duplicating machine. Every one of the employee representatives in the plant and every one of our foremen gets a copy of the report of every single meeting in connection with factory council work. So that all of our management people and all of our employee representatives, whether they are on the committee or not, are informed of just what went on at the meeting. We also post a large number on bulletin boards throughout the factory. That is about all we do along the lines of interior publicity.

In regard to exterior publicity, such as write-ups in the newspapers or magazines, we have been very much against any publicity material going out to the magazines or the newspapers in connection with the work of the council; not because we are ashamed of it in any way, but because we want to be absolutely sure of ourselves and work this thing out first.

In connection with personnel work, I believe that when you start a factory council in a plant you absolutely require in the plant, besides the manager or the superintendent, a broad-minded man to give this his undivided attention. The duties and interests of the manager or the superintendent are of course intensive in some plants, and varied. It is not enough to have a good set of by-laws for the factory council, to have done a great deal of educational work

with your people and to have your management people lined up in pretty good order; it is necessary also to have somebody who is right on the job to see that the thing is carried through in a proper manner. We have in all of our plants somebody who is responsible for the details, such as preparing for the meetings. There are any number of little subjects coming up which there is no use in having come before a factory council meeting. Such matters are taken up in the same way as Mr. Day takes them up—with the foreman. He is a sort of balance wheel to the foreman. He tells him to soft pedal some particular action; that he is going a little too far in a certain direction. And he acts in a similar way towards the employees. He has to be very close to the employees and help them to line up and get the proper result out of their factory council. In some of our plants we have a man who gives full time to this, and in smaller plants a man who gives just part time.

MR. MACLACHLAN: There is one point I would like to bring out. Yesterday the speakers referred to the fact that we were completing a cycle.

The plant councils which have been described have been in effect for six months or over, very few having been put in effect since the period of depression commenced. I think it would be well for us, and for the companies that may be interesting themselves in plant councils to show something of the advisability of instituting plant councils at the present time, when most of the points to be discussed, wages and hours, will likely be in regard to lowering wages rather than raising them, and shortening hours rather than increasing them, which were the questions discussed some six months ago.

MR. CHING: Mr. MacLachlan has injected a very vital question into the discussion, and if I may be permitted to answer I will say just what I said yesterday. When you get a group of people together and place facts before them, you need not fear the results. Let us not get any mystery attached to this thing. Let us realize that it is merely a question of placing our views before our employees and giving them an opportunity of placing their views before us. If it comes to a reduction of wages or a lay-off, it is much better to do it through these means than to post a cold notice on the walls that wages are reduced to so-and-so, or that so many people are to be laid off. It is merely a case of getting together and explaining the circumstances, and when the facts are placed before the men I have not any fear of the results. Of course, it is not all plain and easy sailing. You are going to have your arguments across the board. You are going to have some good hot ones. Don't think that because you go into these councils everything is going to be smoothed out. You are taking on an additional burden, but you will always know where you stand and the other fellow will know also.

There is just one other point. It is very easy for us here, who are representing large companies, to discuss various plans of group insurance, annuities, profit-sharing, and all the other things that have been put into effect by large companies. But consider the situation in the United States. There, 95 per cent of the employers employ less than 250 persons. I believe only about three per cent employ more than 1,000 people. That is one side of the picture. Now, consider the other side. About 33 per cent of the employed are in plants having over 1,000 employees. I have always thought that there is a tendency in a conference such as this to look at the thing from the viewpoint of the large employer or the large corporation, whereas, in many cases, the difficulty starts in the small plants where you have, I may say, the autocratic boss,—the fellow who knows the business and is going to have his own way. Let us also consider that in Canada there are also many small employers, and that

we must not attempt to outline an industrial relations policy solely from the viewpoint of the large employer. If I were called upon to define an industrial relations policy my definition would be this: an industrial relations policy is that policy which will work where it is applied.

MR. COFFEY: I think Mr. Ching has raised a very good point indeed. Yesterday when I spoke with regard to the industrial council that we had in operation at our plant, I was speaking of what I think we may call a small plant. It is very interesting to hear of the wonderful schemes that some of the large organizations have; but I agree with Mr. Ching that the size and nature of the organization have a very definite bearing on the policy with regard to welfare activities. I know that so far as our organization is concerned we cannot very seriously consider some of the schemes adopted by the larger corporations.

I think the point raised by Mr. MacLachlan, and afterwards to some extent by Mr. Ching, is a very important one to consider. It really boils down to the question of confidence and contact, and if you have the right kind of contact I think you can solve anything. There is one thing of which I am absolutely sure, and that is that a small organization considering industrial councils ought to have very clear ideas as to where they should go and how far. I would certainly deprecate any idea of recommending that the small organizations should get into the field which has been entered upon by some of the larger organizations. That is a matter which is really open to debate. One feels sometimes that these problems ought to be tackled, but the difficulty is to know what to do and how to solve them. I think the questions of insurance and pensions for instance are very debatable ones, as to whether it is the function of industry to take care of such matters or as to whether it is the duty of the state or community.

One thing, of which I am absolutely sure, is that we have to get back again to the idea of imbuing every representative of the management side of the plan with the spirit of representing the company to his fellow workers. If that spirit prevails, we will solve our problems.

Proposal for Annual Conference on Industrial Relations.

MR. OLZENDAM: The thought occurred to me that it might be possible and it might be a good idea to form all the gentlemen present at this time—this is merely a suggestion—into a Canadian Industrial Relations Council, to gather information together from time to time and perhaps to put on a firm basis these yearly gatherings.

MR. MACLACHLAN: May I suggest that a number of us here are members of such a council in the city of Toronto. It was organized, I think, some two years ago, and we have had the pleasure of sitting in at various association meetings in the United States. I think the meetings in Toronto have been very beneficial. I think that possibly in other centres such a meeting together would be very beneficial. I think the meeting together on a national basis to simply discuss the matter between the large companies and the small companies, not forgetting that a number of these problems cannot be tackled by the smaller companies, would be of great benefit and that the suggestion put forward is worthy of serious consideration.

The association in Toronto is composed primarily of those interested in personnel work, particularly on the employers' side. It is divided into two distinct classes of members. Class "A" members have to be connected with a manufacturing or other type of plant; Class "B" members may be engineers, such as I am, or college professors, departmental officials, or others interested in personnel matters. The officers of the association must be class "A" members.

They hold meetings in Toronto once a month, I think, from October to May, and discuss such subjects as I have already mentioned; accident prevention, medical service, cost accounting, employment records, methods of employment and industrial councils. The attendance at these meetings would average, I think, about forty. I believe most of the employers of Toronto who are engaged in personnel work are members of the association, some of them being here to-day; there, of course, being many others.

The chief benefit of the association has been the discussion of problems that worked intimately into the daily routine of the men engaged. We have been discussing the broad principles, but they discuss the means of working out policies that have been laid down. Certain phases have been taken up; for instance, during the flu epidemic of last year I gave them a paper on the method of handling a flu epidemic in a city among their employees, and other different subjects have been taken up. They have gone outside their own association at times for speakers. Mr. Tom Moore spoke on the question of organized labour in industry. Other outside speakers have come in from time to time.

It is purely an association for the discussion of problems intimately connected with the routine of the various members, and, I think, has served a very useful function in carrying on that work. It was originally The Employment Managers' Association, but it was felt that that name should be changed to the Industrial Relations Association, and the change of name was put into effect. I think that in any large centre where there are a number of organizations interested in personnel work, it serves a very useful meeting place for the men connected with that work, so that they may discuss their problems as they come up.

The secretary of the Association is G. W. Allan, Care of the Consumers' Gas Company, 19 Toronto Street.

THE CHAIRMAN (Mr. Brown): I desire to state on behalf of the Minister of Labour, that we welcome the study and investigation of this whole subject, feeling that it cannot be otherwise than helpful, and we would welcome the extension of these study groups from one centre to another, and would be glad to assist in any way possible in furthering the work.

MR. CHING: I wish I could adequately express my appreciation to Senator Robertson and to the Department of Labour for the opportunity of being here, and I want you, Sir, to understand that I personally appreciate it more than I can tell, and the people that I represent also appreciate it. It has given me an entirely new view of the Department of Labour. I have seen the broad-mindedness and the wonderful spirit of co-operation exhibited by the Minister of Labour and the members of his department, and it makes me very proud of my home land.

In connection with the matter that has been brought up, I think you have here in Canada your organization; I think it sits at the head of the table. I think you have your opportunity for accumulating and distributing information and I have full confidence in the ability of the Department of Labour to carry on the constructive and co-operative work that has been started here.

THE MINISTER OF LABOUR: I am sure the Department, particularly so long as I have anything to do with it, will be delighted to be the convener of a gathering such as this, at least annually, if you feel that we would not be imposing upon your principals. I think such a gathering would serve a very useful purpose, and that by means of it we could from year to year gauge the measure of progress flowing from the efforts we are all endeavouring to make; and that, when we realize what has been done by probably 12 or 15 large concerns in Canada during the past 18 months or so—some of them having more recently commenced

—we could come back here a year hence and see a picture that would be very encouraging to us all. I think it is very important, that strenuous efforts along this line should be made during a period such as that through which we are now passing—even more necessary than in a prosperous time when everything is on the ascending scale. If there is no objection, we can just assume that a year hence, another conference of this sort, perhaps on a larger scale, may meet just as we have met now. And before you leave to-day, may I suggest that if in your minds it would be useful for the guidance of both employers and workmen throughout Canada that this delegation of employees engaged specially in this work—the desire of every one of you being to promote the best interests of both employers and workmen—should by resolution place your views in concrete form, it would be of aid to others in reaching a decision as to their future conduct respecting this question.

MR. COFFEY: Mr. Chairman, I should like to take this opportunity of endorsing Mr. Ching's remarks. At the same time, I should like to say a word in support of what has been said by Mr. MacLachlan. Mr. MacLachlan did very valuable work in the organizing committee of the Industrial Relations Association of Toronto. It was the feeling of most of us, and our desire, that we should some day in the not too dim and distant future see organizations scattered throughout Canada, so that ultimately there would be nation-wide organizations of men who were interested in personnel work of every kind. The work done in Toronto in the last two years has been wonderfully inspiring, and it is my hope, and I know it is Mr. MacLachlan's, that that work may supplement any work that an annual gathering like this might do. I think it was with that spirit and with that ideal that Toronto in supporting work of that kind added something to the accomplishment of industrial relations in Canada. I know the officials of that organization would gladly help in any way possible any group or section or any individual manufacturer. I know full records are available for any interested parties, whether on the side of labour or on the side of capital, and that we will gladly supply any information to anyone who desires it.

DR. SINCLAIR: Mr. Chairman, I also bear willing testimony to the fine piece of work carried on by this Industrial Organization in Toronto.

I think we are particularly indebted to the Hon. Senator for the very careful, comprehensive and wise statement made by him. I feel too that the suggestion that we should carry on from year to year is a wise one. It does appear to me that this piece of work, if it is to be nation-wide—and it should be nation-wide—should very properly come under the guidance of the Department of Labour. We are particularly fortunate in having at the head of this department a man who is appreciative of both sides of the question. In reference to the question that Senator Robertson raised as to the spirit that exists between the industrial councils and organized labour, he used the very careful word "antidote." As I understand it, organized labour has in mind the betterment of the conditions of the workingman. That is the ultimate end of all their operations. That is the main idea also of the industrial councils. We are both headed towards the same goal, and we are both sincere, I think. We want to be frank; and if that is the case there ought to be no antagonism, no opposition on the part of either of these organizations to the other. I believe, after an experience of two years and over of the workings of these industrial councils in our own plants, that a very important contribution has been made to the solution of the labour question. I am aware of the fact that in certain circles in organized labour there has been some suspicion, and perhaps a lack of enthusiasm in regard to industrial councils. That is because of lack of education, but I believe that when education along these lines has become general, when the facts are known, we will all realize that there should be no antagonism to these organizations that are working

to the betterment of the economic conditions of the country. My own feeling is that there is a fear that industrial councils give a certain amount of control to the management. In our own plant we have not any arbitration clause, but we have found, gentlemen, that we have had two years of success. There has been harmony, and there has been a growing and continued growth of confidence. If the time should come when the matter of arbitration ought to be considered, we will cross the bridge when we come to the stream. We have found that the longer a man is in the employ of the company the greater is his loyalty and efficiency. There are bound to be a certain number of men who, because of lack of experience or because of a certain development or temperament, do not take kindly to it, but these men are becoming educated to it. I feel that the statement of the Senator has gone to the crux of the situation. I feel, as Mr. Ching has said, that it would be a good thing if this work were carried on under the conduct of the Minister of Labour, and I associate myself with that idea most heartily.

MR. MACLACHLAN: I have been trying to be brief, and I think perhaps my error is in being too brief in the proposition that I put forward. The smaller companies possibly cannot afford to send representatives to attend meetings here, even annually. In Toronto, the meetings are held weekly to discuss intimate problems, such as visiting nurses, physicians, accident prevention, and so on, with which time should not be taken up here. Those questions could be taken up with a great deal of benefit to all concerned. No doubt annual meetings of this kind, convened by the Minister of Labour, are a great benefit to Canadian industry as a whole. Having worked with the Department for some two or three years, I know very well what has been done by the present Minister of Labour in developing Canadian industry.

In speaking of another point that I raised, I had no doubt in my own mind as to the advantage of councils, even during a period of depression, but I thought it would be well to bring out the ideas expressed by Mr. Ching and others, for the benefit of some industrial leaders who were not sold on the idea of industrial councils during the period when the wages were going up, that now, when the shoe is on the other foot, possibly might be no time to put them into effect. Personally, I feel that this is a far more opportune time to put them into effect than previously.

MR. YOUNG: Mr. Chairman, I ask for your further indulgence in order to say a few words. I am here as your invited guest from across the line, and because of that, and because I am a citizen of the United States and can claim no Canadian connections, perhaps I can speak just a little freely on the subject we have had under discussion as to a possible conflict between the Industrial Relations Association of America and the continuation of conferences such as we have had here.

It has only been since I have been with the International Harvester Company that I have got across the line at all. I remember in my school days the United States was printed in pink in the geography, and Canada was printed in pale yellow. When I came across the line I looked for the dividing line, but I have yet to see any difference either in the country or in the character of the people. We are all of a common race, and, I am sure, will want to continue as such. The Industrial Relations Association of America, as I see it, is more concerned with the intimate tactics of carrying on the personal relationship than with developing a strategy so far as local meetings are concerned, and I want to say to you gentlemen of Canada that you are missing one big, fine opportunity if you allow to go unheeded the invitation of your Minister of Labour to continue such conferences as we have had here or fail to lend him not only your assistance but your active and hearty support in the programme which he has laid out.

The Industrial Relations Association of America has been in existence for some time, and yet it has not been called upon by the government to function along such lines as have been suggested here. I would like to suggest, Sir, that after all the two proposals made are not competitive but rather supplementary, the one to the other. I think the Industrial Relations Association will extend its work in Canada. I believe there will be in other communities, just as there is in Toronto, a grouping together of the men interested in personnel work for the exchanging of views and counsel as the development and furtherance of high ideals.

At the present time the only large clearing house seems to be the National Industrial Relations Association of America. I hope it will be international. It would well serve the Department of Labour in carrying out the programme which you have in mind, and I am sure you will always meet with an instant response from it. In the meantime you have an opportunity of taking advantage of this contact that has been established, and I would urge that if you have the certain broad strategy that you wish to develop you should feel free to call upon the people here and others with whom you come in contact.

I wish I could express as eloquently as Mr. Ching has done the pleasure that I feel, as a stranger from across the line, in being invited to attend this conference. It is only attempting to paint the lily to tell you how much bigger labour can be made by such contacts as this. I shall go back to Chicago with the feeling that I have greatly profited, and shall have in the future, even more than in the past, an earnest and sincere desire to co-operate with you to the fullest extent of my ability.

Statement of Mr. Quirk regarding the Operation of Joint Councils.

MR. QUIRK: Mr. Chairman, in the discussion before the conference to-day you have referred to communications from various employers and it has occurred to me that it might be of interest to tell what the other side thinks of industrial councils. There have been brief quotations of the opinions as expressed by the employees, but I rise to add from my own personal knowledge some opinions expressed by the employees in reference to works councils. The Minister himself assigned me to the duty of investigating this question, and, to be perfectly frank, I was not so much interested in what was said by the employers, because they can take care of themselves, and have an opportunity of expressing their opinions. Being anxious to determine the truth as to this work, I asked some of the gentlemen if they would allow me to come in personal contact with their employees, and I would like to express my appreciation of the courtesy and frankness of the way in which these gentlemen said: "Go and have all the talk you like with them." I had an opportunity of meeting the employees in many companies—probably not as many as I would have liked—and the opinion which I arrived at as to what the employees think is probably expressed as well as it could be expressed in the words: "Works councils remove all grounds for dissatisfaction, suspicion and discontent." Those to whom I spoke were men with long records,—one having a record of eighteen years, one ten years, and one four years. They expressed their opinions freely, and the essence of what they said was: "We have removed suspicion." This impressed me more than anything else, and I mention it for the purpose of corroborating what has been said as to the success on industrial councils.

General Discussion on Value of Personnel Work, Etc.

THE CHAIRMAN (Mr Brown): I think we would perhaps be interested in hearing from Mr. Young and Mr. Ching as to the value of the personnel work or

any other feature of the work which is being done in corporations in the United States, as well as from any among our own people here who would like to bring out this particular phase of the question. We have been discussing the question of publicity,—the written word. The Minister, I am sure, would be glad to have on record an expression of views as to the value of personnel work, for instance. Would you, Mr. Young, be good enough to give us your views and the benefit of of your experience on the foregoing subjects?

MR. A. H. YOUNG: Mr. Chairman, I outlined in some detail this morning the steps we are taking at our local plants, with regard to publicity, and the thought has been running through my mind as we sat here, "I wonder how you plan to distribute, if at all, the minutes of this meeting." I notice with a great deal of interest the supplement to the LABOUR GAZETTE giving a résumé of the status of joint councils in industry, national and international, and I believe it is an extremely valuable document. I have already asked you for a number of copies, which I intend to distribute to friends of mine in other companies as well as to a number of our own personnel men. It is an admirable brief on the subject. I would like to have at hand the expression of Senator Robertson in opening the meeting, and the various talks that he has given us. I have heard a great deal from Mr. Frye, and Mr. Coffey and Mr. Sinclair and the other gentlemen around the table, as I sat here, and have profited greatly by their description of the works in which they are engaged. I wonder if the Department of Labour has in mind the preparation of further supplements of this nature. If the officials of the Department are considering it, I would strongly urge that, if it is at all possible, we be furnished with copies of such publication as you may make of the minutes of this meeting.

Possibly the Department might care to interest itself in the further development of certain parts of the technique of employment operation, group insurance, co-partnership plans, profit-sharing and all the thousand and one of the various factors that go to make up the complete cycle of industrial relations. I am sure it would be of inestimable value. I would presume to say to you, Mr. Chairman, that undoubtedly the Department would find it of great value in its own work.

A question may arise from an employer as to what is the real value of spending a good deal of time, let us say, on the introduction of a new employee into the shop. You know, it is only a short time ago that employment managers were bragging that they hired two or three men a minute. Now the consensus is changed entirely and we are beginning to boast that it takes two or three hours, two or three days, or two or three weeks at times, properly to install a new man in his job. The more thought we give it, the more commonsense we see and the more dollars and cents of return in this proposition of adequately explaining the company and the organization to an applicant for a position, so that he begins to feel that he is a real human being with a soul and with creative instincts and is recognized as such, rather than a mere cog in a machine.

On the subject of labour turnover, I do not suppose any single question is more debated than the question of how it ought to be figured. Some people think now that we have had the wrong slant on that; that we are too much concerned with labour turnover and not enough with labour stability. After all, what do we care how many men we have to sift through to get a steady, desirable applicant? A high labour turnover may be a true indication of effective recruiting rather than proof of poor employment practice, as some people not conversant with the subject have come to believe.

So on this subject of publicity I would respectfully suggest, Mr. Chairman, that there might be a means provided—I would say, at first thought, by occasional supplements to your very valuable LABOUR GAZETTE—whereby there would be available for a rather broad general distribution the minutes of such meetings as this and the analyses and findings of the various investigations of the Department on the technique of personnel work.

Now, as to the value of that work specifically, I think it is idle to discuss it. It is a condition and not a theory that confronts us. We have had portrayed to us the change that has come about in industry, and in the larger establishments it is absolutely necessary that we provide an organized means of restoring that human relationship which has been lost in industry. Without it, I am quite certain, industry could not have been as well mobilized as it was during the war. We have had our lesson there. We had the crystallization of the national thought on just that subject. Now with the war ended—technically ended on this side of the line at least—we have come to a realization that as constructive peace measures, not only for international peace, but for industrial peace as well, these things which we began must be continued, must be carried to a greater refinement if we are eventually going to meet the present need of industry for harmony. We now realize that the interests of the employer and the employee are identical; that if the employees are to be certain of the maximum return for their labour, good working conditions, happiness and prosperity, it must all come from the prosperity of the business itself; and the prosperity of the business cannot be assured to the owner unless he has contented employees who are working with a real feeling that they are serving humanity well in their particular occupations and are happy and satisfied; and he can produce the best line of merchandise or the best quality of manufactured product only if he has the best working conditions and the best working force obtainable, working in a happy frame of mind.

THE CHAIRMAN: Thank you, Mr. Young. Mr. Ching, would you state your views?

MR. CHING: Mr. Chairman and gentlemen, Mr. Young, I think, has covered the ground quite thoroughly. It is very well recognized that in practically all of our large industries in the United States personnel work is necessary. The old haphazard way of having the foreman hire and discharge men was, to say the least, inefficient and in many instances inhuman. A foreman is in most instances not fitted by his training to select and hire men of the proper type from the broad viewpoint of the company.

Furthermore; without some organized personnel work in a plant of any size, you have men coming into a department and going out of that department as unfit, when as a matter of fact they would be eminently well fitted for some other department in the plant.

Another important thing in connection with personnel work, that Mr. Young has touched on, is getting the man to feel at home on his job. The employment or industrial relations manager should function in such a way as to make the man feel at home on his job. Assuming that you have the proper man selected for the job, it is necessary to properly introduce him to the job. This may be carried out in various ways; one of which is by having a training school for various operations within a plant. This is, in my opinion, very important in many plants.

Therefore personnel work, or employment management, or industrial relations management—by whatever name it is called—is becoming so much a part of the industrial organization of our large companies that we are no longer

discussing it as theory. Especially in council work, such as Mr. Frye has discussed, it is necessary to have a proper organization. And—if I may say here something which always makes me see red—we have had so many theorists getting into so-called personnel work, we have had so many persons using the idea of personnel work as a profession, that people have been getting away from the commonsense view of it. Personnel work is not a profession at all. To my mind it is a definite part of management. It is necessary to have a good commonsense man in charge of employment and allied matters in a plant. We have found it so from our experience, and I think that more and more of the large employers across the line are adopting the idea.

As to what the functions of such a man are, that of course depends a great deal on the type of plant. In some plants it may be that the manager or the superintendent may function in that capacity, but there must be someone who feels the responsibility of handling the human element, someone who has that job definitely placed on his shoulders.

THE CHAIRMAN: Answering the point raised by Mr. Young as to publication of our proceedings here—it is our definite thought that we should bring out in bulletin form, as a supplement to the LABOUR GAZETTE, a report of this conference; not necessarily a verbatim report, but one which would not overlook any important thought which has been contributed to our discussion.

In addition to the pamphlet of information on Joint Councils in Industry with which we have started, and of which Mr. Young has spoken so kindly, our thought was that we would follow up with a bulletin of a brief kind indicating the different types of councils in existence in Canada. We have, in fact, the material for it on the table here at present. Apart from that, we are at present giving attention to other closely allied subjects, and trust that our publications on these lines will be of assistance. There is a special body in Canada, a very representative body, working under the direction of the Research Council, which is going into the subject of industrial fatigue at the present time. The information which is contained in its reports will be made available to the widest possible extent. The subject of apprenticeship and industrial training is one on which I might speak, if I opened up on it, at some length, but I am not going to do so.

The subject of training for industry is one on which we think we could, perhaps with advantage, bring out a general bulletin. The subject of unemployment insurance is another one in which the Department of Labour is interesting itself from the study point of view. The question was mentioned in the Speech from the Throne. I am not going to dwell on it, but we are at the present time investigating the subject and there probably will be a conference on that special subject in the early future for purposes of information and exchange of views in a preliminary way before any policy is formulated.

MR. COFFEY: With regard to personnel work in a small plant, I have accompanying me at this conference Mr. Riggs, who is supervisor of our industrial relations department. Perhaps it would interest you to get an outline of the methods by which we handle our personnel.

THE CHAIRMAN: Certainly, we would be very glad to hear from Mr. Riggs.

MR. F. L. RIGGS: Mr. Chairman, some months ago our president was good enough to write for our book of information for employees an article on the history and aspirations of our plant, and I would just like to read a brief extract from his article:

“The company has always striven to conduct its affairs on sound, conserva-

tive business principles. It aims to produce goods which in quality and workmanship are unexcelled and which in service will be the best of their kind."

And again: "It strives to furnish steady employment to all members of its organization whether in factory, office or selling department, and it desires to advance always those in its service if their qualifications seem to warrant such advance."

And again: "It also earnestly requests the co-operation of each and every employee to preserve and enhance the good name and reputation of the company, thus promoting the interests of the company and the employees."

It was realized some time ago that the need and the value of a relations department was a fact and not a theory, and in establishing the department certain functions were set down. They come under the head of employment, factory training, adjustments, working conditions, health and safety, group relations, co-operative activities and general education. This is a rather ambitious programme, which was adopted about five months ago, and which we realize it will take a great deal of time to work out.

We feel that one of the chief values of the department is in the research work which it may do, because many of the schemes which have been attempted by larger companies are not applicable to the smaller company, and it is a very serious responsibility to discern between all of these schemes and to see that the schemes which we adopt conform to the ability of the company to finance them and to the needs of the workers, with particular reference to their sex, nationality, and the conditions of work.

In touching upon the employment of workers, we have adopted schemes which we think will add to the harmony of our relations. We engage the worker; we endeavour to classify him and by means of job analysis to place him in the work for which he is best fitted. On the other hand we supervise the discharge of employees and endeavour in preparing our turnover figures to have some comprehensive idea of what is in the mind of the man when he feels that he must leave us.

With respect to group relations, I have the honour to be the secretary on the management side of the factory council, and, as Mr. Coffey has pointed out, the management endeavours merely to encourage plant activities. The Sick Benefit Society, the Athletic Association and various other employee activities are handled by the employees without any interference from the management, we merely giving them such assistance as our facilities afford.

Under the head of co-operative activities we have included cafeteria, rest-room, legal aid, summer camps, transportation in the event of the city transportation facilities being tied up on account of strike, noon-hour concerts, etc.

The programme is an ambitious one, and we do not hope to put it all into effect for some time to come. We may find that conditions will make necessary certain changes in our plan, but we try to bear in mind always that any attempt which we make to increase the good relations between the company and the men must have something definite to which to tie. The productivity of the plant is the basis of all our activity, for we feel that unless our work does assist the production managers, it will of necessity fail in its purpose.

Recall of Employee's Representative.

The Chairman: In connection with the operation of joint councils, has any general attention been given to the question of the recall or changing of

employees' representatives on the joint councils? It is a matter which was brought to our attention at one stage, the question of individual workmen being perhaps no longer representative in their views or acceptable to the employees. Is it a question which any member of the conference would like to speak to?

MR. FRYE: We have that in our plan.

MR. YOUNG: We have it also.

MR. FRYE: We have provision in our plan that two-thirds of any group of voters that wish the recall of their employee representative may make a petition and forward that petition to the executive board of the employee representatives, which is their general chairman and the chairman of their committee. If the executive board of the employee representatives pass favourably on that, the recall goes into effect. This gives a little balance to any recall which may be started without the proper foundation or the proper information. In case the employees of any group send through a petition for recall, very often the chairman of the executive board can go into that and explain a number of things which the employees of that group did not understand when they started their recall proceedings.

DR. SINCLAIR: Mr Chairman, I rise just to make a suggestion. In the very admirable speech of the Minister this morning he suggested that probably it might be thought advisable as a result of our conference to put in some sort of resolution an expression of our views. I feel that there have been some things said by most of the gentlemen around the table that probably might be wisely put into some sort of statement as an expression of our views, and I would suggest that the following gentlemen retire to formulate some sort of statement that might be submitted to the conference. Then we could discuss it and adopt it, if it is found satisfactory, or amend it. I make the suggestion coupling with it the names of Mr. Coffey, Mr. Frye, Mr. Winter, Mr. Olzendam and Mr. Day.

THE CHAIRMAN: Is it your pleasure, then, to accept this suggestion?

The suggestion was adopted.

Effect of Joint Councils on Output.

MR. DAY: I would like to ask, Mr. Chairman, an expression from some of the gentlemen here as to whether or not any contribution has been made to production from the working of the councils.

THE CHAIRMAN: As to the question of production, we have a brief reference to the subject in the case of certain Canadian companies in the departmental bulletin on joint councils in industry. It is very brief. It contains no figures. Does anyone desire to speak to that subject?

MR. WINTER: Mr. Chairman, although it would be a difficult matter in our business in any way to put in figures the additional production that we have obtained through the working out of the plant councils, still we are of the opinion that there has been some improvement in the production of our work owing to the fact that the plant councils have co-operated with the company in the way of agreeing to have less men on certain classes of work, and that those men have actually produced approximately the same as was produced by a greater number of men. Of course it is an economy that is pretty hard to define in dollars and cents or in actual production, in a company operating the

way the telephone company does, but we all believe that there has been some considerable saving owing to the operation of the plant councils.

MR. VALENTINE: Like Mr. Winter, I feel it is a difficult matter to estimate just what, if any, benefit you get in production through the working of industrial councils. It is true that in our factory we are now getting better results than we obtained a year or two ago, but of course it is not all due to industrial councils. However, I think that as far as our company is concerned, the industrial council has proven a means of contact with the management, and vice versa, and that it has resulted in a better understanding and a better feeling and undoubtedly has had a beneficial effect. As to just what percentage of improvement there has been, I would not like even to hazard a guess.

DR. SINCLAIR: I would like to add just one brief word. I may say generally that we have found that the industrial councils have added to the efficiency and to production; and in saying that, I agree with Mr. Valentine, who has added that we must not place it all to the credit of the industrial councils.

Resolutions Adopted by the Conference.

MR. COFFEY: Mr Chairman, I take pleasure in submitting the resolution that has been approved by the Resolution Committee. I will read it out.

RESOLVED, That the members of the group assembled in conference at the call of Hon. Gideon D. Robertson, Minister of Labour, do hereby express our sincere appreciation of the opportunity presented to get together for a frank discussion of human relationship in industry. The members of the conference believe that the broad-minded attitude of the Minister and members of the Department cannot fail to bring about a higher degree of confidence in the Department on the part of those who are engaged in industry, whether they be employer or employee, and will eventually bring about a better understanding of the problems of industry on the part of all.

It is the consensus of opinion expressed by the members of the conference that the work thus far conducted in the field of industrial councils justifies a continuation of the confidence of both employee and employer.

We would welcome further conferences along similar lines, to be called at the discretion of the Minister of Labour.

THE CHAIRMAN: Gentlemen, the subject is before you in the terms that you have heard read.

MR. WINTERS: I second the motion.

The motion was agreed to unanimously.

MR. SINCLAIR: We have already expressed our appreciation individually. I would like to move, so that it may be on the minutes: That we gentlemen assembled express our very sincere appreciation to the Minister and the Department of Labour, notably Mr. Brown, for their invitation and for the courtesies extended to us while in conference and also offer our congratulations in regard to the success of this conference.

MR. FRYE: I second the motion.

The motion was agreed to.

MR. MACLACHLAN: I do not want to make a formal resolution, but might I suggest that the plans of the various plants here represented be made appendices to the minutes of this meeting? We have been talking in regard to the benefits of these plans. Some of us know most of the plans, but I do not think any of us know them all in detail. In using these minutes as information I think it would be of great assistance to all of us and certainly to those outside, if the minutes are sent out in digest form, to have the detail plans as a guide to look at. It is merely a suggestion.

THE CHAIRMAN: In reply to your suggestion I might state that we have in course of preparation a bulletin dealing with the individual plans and the information will shortly be available, in the form of a separate publication.

Concluding Remarks of the Minister of Labour.

It was because of my having had the opportunity and pleasure of attending the function to which Mr. Olzendam referred that I conceived the idea of calling a meeting of this sort. I have never seen a more clear-cut demonstration of the usefulness of co-operation than was exemplified at the function referred to. There were 275 employees and officials of the Spanish River Pulp & Paper Company gathered together at their convention, which lasted, I think, two days. On the evening of the 7th the employees gave a ball, and I have no doubt the Company helped them. The President of the Company led the grand march with the wife of one of the employees.

I was not present on that occasion, but I was present at the banquet on the following evening, and the spirit of confidence and co-operation that was exemplified there was to me truly wonderful. It was while sitting at that table and incidentally learning that the Spanish River Pulp and Paper Company had a special man who had given his whole time and attention to this phase of their work, that the thought occurred to me that there are other companies in Canada who are doing the same thing, companies of which I know and there may be many of which I do not know. Before leaving the Soo, I talked with the management of the Spanish River Company and also of the Algoma Steel Corporation respecting the advisability of having a meeting at which the gentlemen engaged in industrial relations work for their respective employers might come together. I thought it would be interesting and profitable for them to be brought together and to get detailed information as to the policy and lines of action they have followed, knowing full well that such information would be invaluable to the Department, particularly to the officers of the department who are undertaking to develop and promote the industrial councils idea and to improve relations between capital and labour in Canada.

There are two points that I would like to dwell upon just briefly. One, mentioned by Mr. Stevenson, is this: whether or not it is desirable to work through or with organized labour where such exists. The British idea and the general policy adopted by the Whitley council plan it that both employers and workmen should be organized, because without that organization the employees do not speak with the authority with which they would naturally be vested if they were speaking on behalf of the members of a society. I do not think any employer in this country questions a man's right to be a member of any fraternal society or church, and I think there are very few who even ask an employee whether he is a member of a trades union or not; but I think there is a tendency on the part of some employers to refrain from dealing with their workmen through their unions. I have had some experience in connection with that work

during the past 25 years—it has been largely confined to railroad service—and it has shown that the officials of our large railways in Canada, and I think the same applies very largely to the United States, if they are asked, will say, as they have said to me on several occasions, that they would not have their employees unorganized if they could, that because of their employees being so widely distributed it is a physical impossibility for the executive or the management to be in anything like intimate touch or relationship with them and it is therefore necessary that some organized means be available whereby the grievances of the individual employees may be brought to the attention of the executive officials in a proper, systematic, and organized manner. That may not apply to so great an extent in an industry where the employees are congregated together in a small area; nevertheless, I fancy it is true that in an organization that employs more than 1,000 men it is not possible for the executive heads to be in close touch with the details as they affect each individual.

I believe that the fear of many employers—who perhaps, have not had extensive experience in operating with their labour in an organized way—is that there will be coercion on the part of the employees if they are solidly organized. I think the industrial councils plan of placing responsibility—perhaps small at first but gradually increasing—upon the workmen themselves, is a very good antidote to any tendency on the part of the workmen who are strongly organized to carry their organized power to unreasonable lengths. I think it is true that any man as responsibility comes to him is more prone to look at both sides of the sheet before deciding what he shall write upon it. If the industrial council plan had not been brought into existence I am very sure that to-day our industrial difficulties would be much greater than they are, and that because of it, thousands of men in this country and hundreds of thousands of men in other countries have had their viewpoints altered and have seen and realized the difficulties with which their employers have to contend, and that it has been a wholesome antidote.

But that is not all. The most important thing in any country is public opinion. As industry grew and as large aggregations of capital came into control of industry and thousands of workmen came under one management, more and more, by reason of the education that came to our people through the press, the view became prevalent that the manufacturer and employer were pirates exploiting labour. You know, and I know, that that is not so; nevertheless that view has grown in the public mind, and it is necessary and important to industry and to the future prosperity and welfare of the State itself that the fact and not the illusion should be the impression and conviction resting in the public mind. It is necessary, therefore, that through the instrumentality of the industrial council movement the employees should become convinced that the employers are playing the game fairly with the cards face up on the table; and they should be convinced that they are welcome to an understanding of all the details that it is essential for them to know, and should realize the problems facing industry and the employer. Then they will realize that their success is bound up with the success of the industry in which they are employed. Those thousands of employees will simply act as levellers in the larger load which moulds public opinion, and public opinion will be guided and moulded very largely by the expressions of view and the statements of employees themselves. The evidence that is given and the expressions of opinion that are uttered by the employees generally in industries, have a great influence upon the public opinion of the whole community, and an industry must have the commendation and the approval of the public generally, or it will find itself in difficulties.

I think it may be found a wise policy on the part of Canadian employers to deal with and through their employees who have decided to organize themselves in a systematic way; and where organizations among the workmen do not exist that fact should be no bar to the establishment of an industrial council. I believe that as a result of the very commendable work of the firms with which you have been associated, and through the efforts and such assistance as the Department of Labour has been able to give in extending and promoting the thought in the minds of the other employers in Canada, a campaign of education has been launched that will inspire confidence in the minds of thousands and hundreds of thousands of workmen and other citizens of the country that will redound to the ultimate benefit and profit not only of the industries and the workmen employed therein, but to the happiness and prosperity of the whole community. It is perhaps unbecoming of me to suggest to you, gentlemen, anything, concerning education along this line, but it seems to me reasonably consistent to ask if you could not circulate amongst your fellow employers throughout Canada, who have not yet given close study to this question, the plans that you have adopted and the results of your experience so far as they have proved beneficial. It would be rendering a public service to industry and to Canada.

Please be assured that it is not only the duty of the Department of Labour but our pleasure to do anything we can to aid in the furtherance of this important work, and that nothing that any employer in Canada, or that any worker or organization of workers may ask of us in the way of information, will be refused. The Department of Labour is the servant of the people of Canada, regardless of whether they be employers or workmen.

We have on many occasions received valuable assistance and information from other countries. We keep in particularly close touch with the Departments of Labour at Washington and London, and we will be glad to contribute from time to time such information as may seem to us to be useful to you and to labour in Canada.

I hope that as a result of our gathering together here on this occasion there may be a substantial extension in this good work throughout the country. And again, may I say that I feel doubly indebted to Mr. Ching and Mr. Young, and to their employers, for their kindness and for the valuable information which they have been good enough to give us. Mr. Quirk and Mr. Stevenson will be for some time to come engaged in giving special attention to this work—to visiting employers or employees who may express a desire concerning industrial councils; they will lend any assistance that they can in the promotion of this most commendable spirit of co-operation and usefulness. Mr. Brown will be at headquarters here assisted by Mr. Hereford who is an experienced industrial engineer; Mr. Brown has been an official of the department for many years and will give special attention to the work at this end. Your continued co-operation is respectfully solicited and earnestly desired, and our services at all times are at your disposal.

May I ask you gentlemen to be good enough to convey the appreciation of the Department of Labour and of the Government to the executives who preside over and govern the destinies of the various institutions and industries with which you are connected and assure them of our thanks for their action in sending you here, and for your coming, and for the co-operation which they, through you, have given and are giving to us.

May I also say this, because it is true? Coming from the ranks of labour, and having been for a number of years an international officer of one of our big international organizations, I felt very reluctant in assuming the administration of the affairs of the Department of Labour, thinking that the employers generally, who did not know me might feel that their interests were prejudiced by reason of a labour man undertaking to administer that Department. My experience has been entirely to the contrary. Whatever little success and progress the Department may have enjoyed during the past couple of years, since I have been connected with it, has been very largely due to the fact that I have had apparently the undivided confidence and support and co-operation of employers generally in Canada. The membership, individually and collectively, of the Canadian Manufacturers' Association and organizations of employers subsidiary to that, have one and all shown a keen desire to play the game fairly and to co-operate with the Department in its efforts to deal honestly by all men. Words can scarcely express the appreciation and the gratitude that I feel because this is the fact, and, while one comes in contact with very many experiences that are depressing and discouraging, that thought or that feeling has been a source of encouragement to me continually. So long as it happens to be our fate to work together in the future, as we have done in the past, I trust that the same cordial relations and the spirit of confidence that has pervaded our associations up to now may continue and grow and that we may have in reality an industrial council in which employers and workmen and the Department of Labour may feel that this is to be a family compact bent upon the same aim and for the same purpose.

THE CHAIRMAN: Any further remarks now that anyone wishes to make? If not, I am going to declare the conference adjourned until our next meeting.

The conference adjourned.

THE LABOUR GAZETTE

Prepared and edited in the Department of Labour, Ottawa

MINISTER—THE HONOURABLE GIDEON D. ROBERTSON.
DEPUTY MINISTER—F. A. ACLAND.

Volume 21

APRIL, 1921

Number 4

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

The month in brief

This issue of the LABOUR GAZETTE contains a summary of the proceedings under the Industrial Disputes Investigation Act, 1907, during 1920, and an account of the matters leading up to the general strike of coal miners in Great Britain.

At the beginning of March unemployment among trade unions was 16.12 per cent of the total membership as compared with 13.07 at the beginning of February, and 4.33 at the beginning of March, 1920. According to returns received from about 5,000 firms there was a continuance in the decline of unemployment, the decline being more marked than in the previous month.

The cost of the weekly family budget of staple foods continued to decline, averaging \$13.23 at the beginning of March as compared with \$14.08 in February, \$15.98 in March, 1920, \$15.77 in March, 1919, and \$7.68 in March, 1914.

The time loss due to industrial disputes was greater during March than during February, and also greater than during March, 1920. There were in existence during the month 26 strikes involving about 3,252 workpeople and resulting in a time loss of 52,928 working days. At the end of the month there were on record 16 strikes involving about 1,735 workpeople.

Proceedings under the Industrial Disputes Investigation Act

During March the Department received a report from one Board of Conciliation and Investigation established to deal with a dispute between the Temiskaming Mine Managers' Association and their employees at Cobalt, being miners, millmen, etc. Eight applications were received for the establishment of Boards, and Boards were established in connection with two of these applications.

Provincial action on Recommend- ations of Washington Conference

At a recent session of the Provincial Legislature of British Columbia a number of laws were passed giving effect to the draft conventions and recommendations of the First International Labour Conference (League of Nations). These laws included the Night Employment of Women Act, the Hours of Work Act, the Employment of Children Act, the Night Employment of Young Persons Act, and the Maternity Protection Act. An amendment was also passed to the Employment Agencies Act, Repeal Act, with a view to the more effective suppression of private employment agencies. This legislation covers all the draft conventions and recommendations of the Washington Conference within the juris-

diction of the province, with the exception of the recommendation concerning the protection of women and children from lead poisoning, a risk not incurred by women and children engaged in industry in British Columbia. The above laws are to come into operation on a date to be fixed by the lieutenant-governor by proclamation concurrently with, or after, the coming into operation of similar laws in the other provinces of the Dominion. No laws have yet been passed this year in the other provinces relating to these matters, but it is understood that the Ontario Government will propose the holding of a conference of representatives of the various provincial governments with a view to obtaining concurrent action. It may be pointed out that some of the draft conventions and recommendations of the Washington Conference are already covered by existing provincial laws.

**International
Ship Owners
and Seamen's
Conference**

Representatives of the International Shipping Federation and the International Seafarers' Federation met in conference at Brussels on January 24-26

under the chairmanship of M. Albert Thomas, Director of the International Labour Office, to consider the question of hours of labour on board ship. Two commissions were appointed by the conference each consisting of four members of each side and the secretaries of the two federations. One commission will deal with the hours of the deck and engine room staffs and the other with the general service staffs. It was arranged that these bodies should meet within thirty days and prepare reports for submission to a new conference which will be convened by the Director of the International Labour Office.

**Agenda of
National
Industrial
Conference of
Building
Industries**

At the request of the National Joint Conference Board of the Building and Construction Industry in Canada, a National Industrial Conference of the Building and Construction Industry has been called by the Minister of Labour to meet at Ottawa on May 3, next. The following subjects which have been agreed upon by a joint committee of employers and workers, will be discussed at the Conference: (1) Existing conditions in the industry; (a) shortage of dwelling, commercial and public buildings, (b) seasonal nature of the industry and possible methods of regulation. (2) apprenticeship and craftsmanship: (a) consideration of National Joint Conference Board proposals, (b) development of technical training. (3) costs and production: (a) factors in building costs, (b) efficiency and its relation to production, (c) hours of labour, (d) wages and their relation to cost of living. (4) Conditions of employment: (a) distribution of labour, (b) unemployment insurance, (c) industrial safety. (5) Development of Joint Industrial Councils.

**Value of
shop committee
demonstrated**

A demonstration of the value of shop committees and of their association with the management, was recently given in the plant of the Robb Engineering Works of Amherst, N.S. Before tendering for certain work in which keen competition was anticipated the company explained the situation fully to a shop committee of their machinists and suggested that they agree to a ten per cent wage reduction for this job only, the company also agreeing to pay a bonus representing one-

half of the difference between the estimated shop costs and the actual costs in the event of any saving being made. This reduction was accepted by the men. A similar proposal, with the omission of the bonus, was made to the moulders' and coremakers' committee and agreed to by them. On all other work the existing agreement remains in force.

Annuities and insurance benefits of Imperial Oil Company

The February issue of *The Imperial Oil Review* contains an outline of the work accomplished under the Annuities and Benefits department of the Imperial Oil Com-

pany for the year ended December 31, 1920, the second year of its operation. Under this department, every employee who has been with the company for twelve months' continuous service is insured at the company's expense, the amount of insurance being from \$500 to \$2,000 according to the length of service and earnings. On December 31, 1920, there were 4,312 employees insured for a total amount of \$3,472,130, an average of \$805 per employee. In 1920, there were 23 deaths of employees who were insured for a total amount of \$26,184, an average of \$1,138 for each member. Forty-eight per cent of employees had no insurance other than provided under this plan. Twenty-five employees were placed on the annuity list during the year. The average age of the annuitants was 67 years, the average service 23 years, and the average annuity, \$708. Approximately \$41,000 were distributed to 760 employees during the year on account of sickness disability, and \$66,000 for accident benefits. The time loss due to sickness was 12,000 days,

and to accidents 4,014 days. Insurance to the amount of \$487,892 was cancelled owing to insured employees leaving the company's service.

Employment of Women, Young Persons and Children's Act of Great Britain.

In order to give effect to certain conventions of the International Labour Organization of the League of Nations the British Parliament

has passed an Act (Employment of Women, Young Persons and Children Act) providing that no child under the age of 14 years shall be employed in any industrial undertaking or in any ship, other than vessels upon which only members of the same family are employed, or school or training ships. Every ship-master is required to keep a register of all persons under the age of 16 years employed on board his vessel or a list of them in the articles of agreement, and of the dates of their births. Industrial undertakings include mines, quarries and other works for the extraction of minerals from the earth.

On the joint application of the employer and the majority of the work-people in a factory or workshop, the Home Secretary may make orders authorizing the employment of women and young persons of 16 or 17 years at any time between 6 a.m. and 10 p.m. on week days and between 6 a.m. and 2 p.m. on Saturdays in shifts averaging not more than 8 hours per day. This provision is to remain in force for a period of five years.

By an order of the Secretary of State the provisions of this Act relating to the employment of children at sea shall take effect on July 1, 1921.

British Labour and unemployment

The Joint Delegate Conference on unemployment convened by the National Executive of the British Labour Party and the Parliamentary Committee of the Trades Union Congress, which met on January 27, re-assembled on February 23 in order to consider the reply of the government to the recommendations made in the report of the Special Joint Committee at the previous meeting. These recommendations were set forth in the March issue of the LABOUR GAZETTE, on page 295.

The Conference unanimously agreed that Labour should continue to press for the adoption of the measures outlined in the report by every legitimate means within its power. A resolution in part as follows was carried with a few dissentients:

"That this conference, representative of the whole Labour movement, is of opinion that the Government's policy of merely extending the Unemployment Insurance Act is lamentably inadequate to meet the present situation and bears little relation to the existing human suffering; and emphatically reiterates its demand that comprehensive steps be taken to restore international trade, and to organize without delay national schemes of work, and that those for whom no employment is provided should be found adequate maintenance.

"The conference concurs with the proposal of the Parliamentary Labour Party that every possible step should be taken to press this question on the attention of the House of Commons, and to insist that the Government should take immediate action for the benefit of the unemployed."

Unemployment Insurance Act, 1921, Great Britain

The Unemployment Insurance Act, 1921, amending the previous acts of 1920, came into force in Great Britain on March 3 last. The new act increases the weekly rate of benefit to 20s. for men and 16s. for women and to half

these amounts for boys and girls between sixteen and eighteen years of age. On July 4 next contributions will also be increased, the employer paying for men, women, boys and girls 6d., 5d., 3d., and 2½d. respectively, the employees of these different classes paying respectively 5d., 4d., 2½d. and 2d. These increases, both benefits and contributions, will cease to have effect on July 1, 1923. Up to July, 1922, a maximum of 16 weeks' benefit may be drawn in each of two special periods from March 3 to November 2, 1921, and from November 3 to July 2, 1922. After that date the maximum will be 26 weeks in any insurance year. The chief qualification for the receipt of benefit during the two special periods will be the furnishing of proof of employment in work insurable under the Act of 1920, in at least 20 weeks since December 31, 1921, and proof that the applicant is normally in insurable employment, is genuinely seeking whole time employment, and is unable to obtain it. In the case of ex-Service men and women and merchant seamen the number of weeks in which employment must be proven since December 31, 1919, is reduced to 10, and in certain cases this proof may be waived altogether. The rule limiting the amount of benefit payable to one week's benefit for every six contributions is suspended until July 2, 1922.

Unemployment benefits of Rowntree Cocoa Works, England

Among the proposals for dealing with unemployment which have been suggested in England, the principle that each industry should take care of its own unemployed has received support in some quarters. The Rowntree Cocoa Company has adopted this plan at its works at York along the lines recommended by a committee composed equally of representatives of the company and of the employees. The scheme applies to all employees between the age of 20 and the age at which they become entitled to pensions from the company. Workers who are thrown out of work are

granted full benefit based on average earnings, while those put on short time receive partial benefit. Full benefit secures to an unmarried worker 50 per cent of his average earnings, while the married man receives in addition 10 per cent for a dependent wife and a further 5 per cent for each dependent child under 16 years of age, but the total benefit must not exceed 75 per cent of his average earnings. The maximum benefit is £5 per week and the minimum £1 5s. The benefit is payable for fifteen weeks to all thrown out of work who have been with the firm for two and a half years. For those who have been employed for less than this period the term of benefit is proportionately less, and an extra week's benefit is granted for each complete year of service over two and a half years. Short time day workers who are employed less than 90 per cent of the normal full time, and piece workers employed less than 85 per cent of full time, receive partial benefits. The cost of the scheme will be borne by the company. The scheme is to be administered by an unemployment committee appointed by the central works council and composed of nine members, all of whom must be actively engaged in the company's business and two of whom must be women. The scheme was put into operation at the beginning of this year. The company reserves the right to terminate the scheme by three months' notice in case of necessity.

Annual Conference of South African Industrial Federation

The first annual Conference of the South African Industrial Federation, was held at Johannesburg, in January, with about 150 delegates of federated unions present, representing 60,000 members. This Federation is organized in five departments; building and construction, manufacturing and general production; public utilities; transport, communication and civil service; and mining. The question of unemployment was referred to a committee which brought in a report

containing the following recommendations: (1) That unemployment be a charge upon those sections responsible for its solution, viz.: (a) the employers; (b) the workers; (c) the state; (2) That an employment fund be created by: (a) a contribution from wages; (b) a progressive tax on profits; (c) a contribution from the state; (3) That adequate provision be made for the support of the aged and infirm. These recommendations were remitted for further consideration. A resolution was adopted by the conference requesting the government to provide for the creation of a permanent industrial board to co-operate and sit in conjunction with parliament and provincial councils and to advise on all matters concerning the industries, and the development of the resources of the country.

Housing by employers in the United States

The results of a study of "Housing by Employers in the United States" are contained in Bulletin No. 263 of the United States Bureau of Labour Statistics (283 pages). The investigation covered two distinct types of communities, namely, manufacturing and mining towns, 213 companies being chosen as representative of all employers providing housing accommodation for their workers. These selected companies, which operated 423 distinct establishments, employed 462,991 men, of whom 160,645, or 34.4 per cent were housed by their employers. The 423 plants investigated were made up as follows: bituminous coal mining, 163; anthracite coal mining, 104; iron mining, 36; copper and gold mining, 11; iron, steel and allied industries, 33; explosives, 5; textiles, 54; miscellaneous industries, 17.

Company housing dates from the time when industry passed from the home to the factory. In the early part of the nineteenth century, it is stated, "many colonial iron masters ruled with almost feudal sway over a neighboring settlement of their labourers and country

people, and such enterprises often became the nucleus of a permanent village." The primary reason for a housing policy lay in the impossibility of supplying homes for the workers in a new district by ordinary methods of commercial buildings. This condition is still common in mining communities and is becoming increasingly prevalent in industrial undertakings, owing to the present movement of industry away from overcrowded centres. But apart from the motive of necessity, employers also find that the creation of a company town ensures the character and loyalty of their workers. "Tenants for company houses," says the report, "are selected not because they are skilled, but on the basis of their indispensability and of their faithful and loyal-service with the company." The advantages of company housing as noted by employers in the course of the present inquiry and summarized in the report, are that a better class of workmen is secured and retained with less labour turn-over; that better living conditions increase the loyalty of the workers, and render them more contented and efficient; that "a better control of the labour situation is secured;" and that it is profitable to the company, facilitating "part time" work, and keeping the company favourably before the public. The real "company town," however, is declared to be the product of industrial isolation as shown by its greater prevalence in mining. Rents of company houses are stated to be moderate and are well within the means of the low-paid wage earner, 68.6 per cent being said to have rented in 1916 for less than \$8 a month. The cost of housing to the employer, however, is given at the very low figure of \$383 per employee houses, this calculation being based upon the cost of the houses alone, not including land or improvements. On this housing investment the employer on the average gets a gross return of 8.3 per cent, a percentage based on the original cost as reported by 60 companies. The Pennsylvania coal companies, however, are said to obtain a

gross annual revenue of 11 per cent on the total inventory value of the houses erected by them for their workers. Few employers use a formal written lease in letting company houses to the employees, occupation being by "tenancy-at-will", terminable at the pleasure of either party without notice. Where leases exist they contain provisions which are stated to have a "potent influence in times of strikes."

Minimum wage laws in United States

The *Monthly Labour Review* of the United States Department of Labour contains in its issue for March a review

of a report of the Bureau of Labour Statistics on minimum wage legislation in the United States. In 1913, the first state law of this kind was passed in Massachusetts, and there are now minimum wage laws in 13 states as well as in the District of Columbia and Costa Rica. Mr. Lindley D. Clark, the writer of the review, sums up the results of these laws as follows:

"The conclusion is inevitable that the allegations of injury to the workers as a result of minimum wage laws are without foundation, and that employers find it at least feasible to operate under the law, while many of them are its ardent supporters. General legislation to equalize interstate competition, for which a number of employers expressed a wish, would appear to be desirable if practicable; though it was repeatedly pointed out in the Pacific Coast States that their very considerable industrial development of recent years had taken place under this type of legislation. Not only have these laws secured to women increased pay in large aggregate amounts, but they have at the same time standardized competitive conditions in the locality, and largely done away with the secrecy that many employers have practised as to individual rates, by which unwarranted discriminations have been made possible inside their establishments—results of great value from moral and economic standpoints."

Jottings

The Third International Labour Conference of the League of Nations, which is to be held next October, will meet at Geneva, the seat of the League. In a communication to the press, Mr. Ernest Greenwood, American correspondent of the International Labour Office, states that there is no basis for published reports that the conference will be held in Japan. He points out that to hold it elsewhere than at the seat of the League of Nations would require a vote of the full conference.

A branch has been formed in the Social Insurance Section of the International Labour Office for the study of all questions connected with disabled men, and more especially with those who were disabled in the Great War.

One of the recommendations of the First International Labour Conference (League of Nations) was to the effect that arrangements be made for the disinfection of wool infected with anthrax spores, either in the country exporting such wool or at the port of entry. In conformity with this recommendation, an order-in-council was passed by the Dominion Government on August 12, 1920, approving regulations made under the Animal Contagious Diseases Act, requiring the furnishing of sanitary certificates by foreign exporters as to the cleanliness and freedom from infection of wool and hair destined for Canada. The forms of these certificates were further amended by an Order-in-Council of February 21, in order to render them more explicit.

Mr. W. L. Griffiths, secretary of the High Commissioner for Canada in London, England, has been appointed as substitute for the Honourable G. D. Robertson, Minister of Labour, at a meeting of the Governing Body of the International Labour Organization to be held at Geneva, Switzerland, on April 12.

Under General Order No. 330, dated February 16, 1921, of the Board of

Railway Commissioners for Canada, all railway companies within the jurisdiction of the Board are required to adopt and put into force not later than June 1, 1921, certain regulations regarding the inspection, general design, construction, and care of railway steam boilers, other than boilers of locomotives and boilers used solely for heating purposes. The chief mechanical officer of each railway company is held responsible for the enforcement of these regulations, and the mechanical engineer must determine the working pressure of the boiler.

An order-in-council P. C. 959, passed by the Dominion Government on March 19, 1921, extends indefinitely the provisions of order-in-council P. C. 2930 passed on November 30, 1920, which expired on March 31, last, (see LABOUR GAZETTE, January, 1921, p. 2) whereby immigrants of the mechanic, artisan or labourer classes, whether skilled or unskilled, are required to be in possession of \$250 on landing in Canada, in addition to a ticket to destination.
